Introduction to the Swedish Briefing

One thing most people know about Sweden in the Second World War is that they were not really involved. While it is true that no Swedish troops took part in the great battles deciding the fate of Europe, there were many times when things could have gone a different way. This briefing is a what-if thought experiment, pitting the Swedish Army as it was back then against the major players in the war in different scenarios. The briefing also allows for fielding the Danish and Norwegian troops trained and equipped in Sweden in preparation for the liberation of their homelands. In the event of the realization of the Save Scandinavia operation these troops would have been at the front fighting to liberate their homes. Below is a compilation of the different scenarios and their impact on the briefing.

The Scenarios

There are two basic types of scenarios which would allow Swedish forces in Flames of War, and these are Offensive and Defensive. First off is one of the most likely scenarios historically speaking,

FALL SCHWEDEN

The relationship between Sweden and Germany was not a very friendly one. The German leadership had mixed views on the neutral country to the north, praising the perceived ethnic purity but condemning the leftist leanings of the government. The Swedes for their part rejected many diplomatic proposals from Germany, and only after being firmly encircled by Axis armies they agreed to allow transit of armed troops over their territory. This was fiercely resisted by the social democrat majority in the government, but faced with the threat of the allied parties breaking away and pressured by the King they relented. They never attempted to strangle the export of iron ore to Germany however, correctly viewing it as an issue which was too dangerous to be belligerent about. In any case, the Swedes saw the situation in 1943 as an opportunity to take a stronger stance against Germany, counting on their weakened military situation to hinder any aggression against them, finally, mobilized and rather well equipped Swedish Army. Hitler did not like it at all when all transit through Swedish territory was cancelled, and fearing a blockade of iron ore from the decidedly unreliable government he ordered preparations to be made for securing the ore trade and eliminating the potential enemy if things got worse. Four divisions were mobilized for the action in Norway, and despite their numerical inferiority they could easily achieve local superiority and were heavily armed. As it turned out the invasion never became necessary and the developments on the continent made the troops needed elsewhere, to the relief of Sweden. If the government had chosen to stop the vital ore trade however, the threat of an invasion could quickly become reality.

This scenario is the one the briefing is primarily based on, Swedish troops defending their homeland against a German invasion. The defensive preparations were extensive and the troops were very willing to defend their homes. It is of course a Defensive Scenario.

TARGET: KIRUNA

The importance of Swedish iron ore for the German war effort did not go unnoticed by the Allies. Great Britain in particular laid up plans for seizing the mining facilities around Kiruna by attacking through Norway. This plan was supported by Churchill himself, but practical problems, potential diplomatic backlash and finally the German occupation of Norway put the plans on hold permanently. Had the Germans failed to secure Narvik, or a peripheral new front been opened in Scandinavia instead of Italy, then the plan might have been actualized again.

This is not a very likely Defensive scenario, but the list works well with it regardless, since it still represents Swedish troops defending their own soil. No changes to the briefing.

FIGHTING THE RED MENACE

Many raised their voices in support of Finland when the Soviet Union attacked, and a small Swedish corps was shipped over to aid in the defence. Due to the alliances formed when Barbarossa kicked in, it was not possible for the Swedish government to aid Finland with troops as it would mean declaring war against all the allies, and war with Great Britain and the USA was not popular ideas. Had the government been more pro-axis and the hawks in the military got their will through then it is not unthinkable that troops would have been raised to aid Finland in the continuation war, since the Soviet Union was considered a hereditary enemy and a lethal threat should they overcome the Finns.

In this Offensive scenario regular troops are deployed to Finland and fight the Red Army, but thanks to lack of popular support for such reckless behaviour in international affairs and the fact that the troops would not be volunteers and far from home, the rating of the troops including all supporting elements change to RELUCTANT TRAINED.

The points available to the force changes accordingly:

Standard force	Expeditionary Force
1000 points	1200 points
1500 points	1800 points
2000 points	2400 points

Should you wish to field a force of volunteers that did fight in the war then it is better reflected by the official Battlefront Finnish briefing, or the unofficial SFK briefing for the Winter War period.

OPERATION SAVE SCANDINAVIA

At around the same time that the German transiting was refused the Swedish High Command began to make some tentative plans for liberating occupied Norway and Denmark. There was already a brigade of Danish troops being formed in Sweden, and Norwegian soldiers, resistance members and police whom had fled to Sweden began to be organized into "Police" battalions. These plans never came into fruition, not even towards the closing months of the war when the government began to fear Soviet occupation of the former German-occupied Scandinavian countries. It is possible that a more pro-active (and suicidal) Swedish government would have tried to forcibly eject the Germans from Norway and Denmark as early as 1943. Such an undertaking would have been doomed to failure with the Wehrmacht still able to conduct large scale operations, but more foolish things have become reality in the course of history. The Save Scandinavia plans had two parts, one for Denmark and one for Norway, and each has some special conditions.

SAVE NORWAY

The banner to the left is the symbol of the 5h Reserve Police Battalion, one of the units raised from Norwegian nationals and trained for war by the Swedish Army. You may choose to either field a normal Swedish national expeditionary force, following the same rules as the expeditionary force in Finland, or you can field a Norwegian Police force, a light infantry company. The Police company retains the rating CONFIDENT TRAINED but gets no extra points to buy troops for. The organization of the Skyttekompani does not change, but they have lighter equipment.

The following Platoons may not be included in the force:

Heavy Mortar Platoon, Heavy Anti-aircraft Platoon, Heavy Anti-tank Platoon and Artillery Battery.

The following Platoons have restricted equipment:

Skytte Platoons may not take Recoilless Rifles, Pioneer Platoons may not take Flame-throwers.

A Norwegian Politi (Police) Company replaces the Swedish special Rule "Homeland of Bofors" with their own rule, "Frihed ble oss født "

SAVE DENMARK

An entire danish infantry brigade was set up in Sweden, called Den Danske Brigade, and they had a quite wide selection of equipment and were very well trained. They would have fought hard to liberate their homes. You may either field a Swedish national expeditionary force using the same rules as the expeditionary forces in Finland, or you may field a infantry company from the Danske Brigade with the following rules. They are rated as CONFIDENT TRAINED and use the normal points to purchase troops for. They have some restrictions on available platoons as follows.

The following Platoons may not be included in the force:

Heavy Mortar Platoon, Heavy Anti-aircraft Platoon, Heavy Anti-tank Platoon and Artillery Battery.

The following Platoons have restricted equipment:

Skytte Platoons may not take Recoilless Rifles.

A Danish Rekylgevaer (Infantry) Company replaces the Swedish special Rule "Homeland of Bofors" with their own rule, "Min Gud, mit land, min aere".

Pansarkompani

(TANK COMPANY)

The armoured formations of Sweden has grown considerably during the war, and now brand new tanks are beginning to trickle in to reinforce and replace the existing older models. The Armour Brigades contains all the support elements needed, from armoured infantry to artillery and reconnaissance, and led by well trained officers they are a force to be reckoned with.

A force based on a Pansarkompani must contain the following:

- a Company HQ, and
- two or three Pansar Platoons

Weapon platoons available to a Pansarkompani are:

- a Heavy Pansar Platoon, and
- a Motorcycle Recon Platoon, and
- Motorised Skytte Platoons.

Support platoons for a Skyttekompani can be:

- a Motorised Engineer Platoon, and
- a Light Anti-aircraft Platoon, and

- Divisional Support Platoons
(An Artillery Battery must be upgraded with 3-ton trucks and 105mm m/40 Haubits)

You may have up to ONE support platoon for each Combat Platoon you field.

Motivation and Skill

The armour brigades have trained long and hard, and lessons learned abroad has not gone unnoticed. A Swedish Pansarkompani is rated as **CONFIDENT TRAINED**.

HEADQUARTERS

1 Company HQ

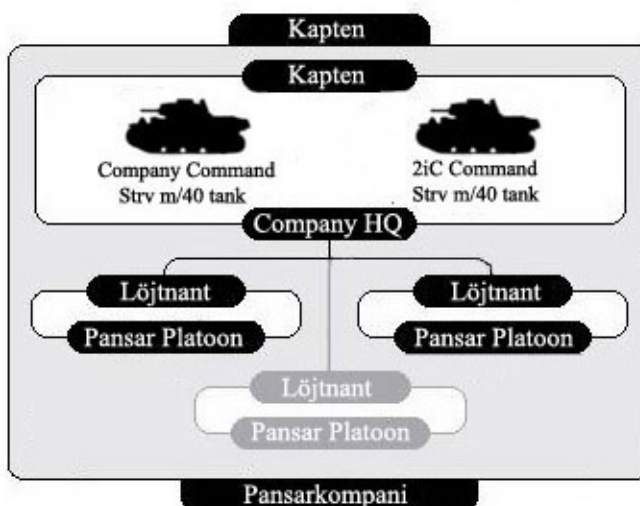

Headquarters

Company HQ 85 points

Options

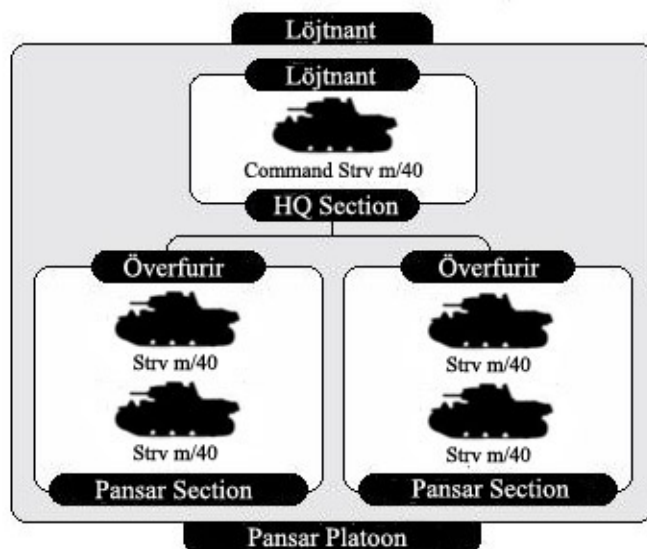

- Replace one or both m/40 tanks with m/39 tanks for -5 points per tank.

A Pansarkompani must be considered a light formation compared to what the Great Powers field, but even so it packs a powerful punch if handled correctly. The armour brigades are combined arms units and must be used as such for success, do not forget about the ordinary infantry when making your plans. Together with the tanks of the Pansarkompani they can overcome all obstacles and lead you to victory!

COMBAT PLATOONS

2 to 3 Pansar Platoons

Platoon

5 Strv m/40	210 points
4 Strv m/40	170 points
3 Strv m/40	130 points

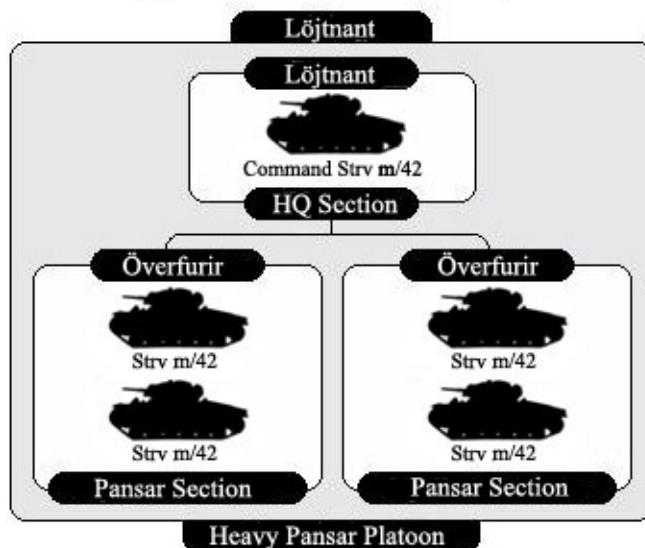

Options

- Replace any number of Strv m/40 with Strv m/39 for -5 points per tank.

The Strv m/40 is the mainstay of the Pansarkompani, but some platoons retain a portion of the older m/39 due to lack of replacements. It is a good light tank, but caution is suggested when facing heavier opposition.

WEAPONS Platoons

0-1 Heavy Pansar Platoon

Platoon

5 Strv m/42	350 points
4 Strv m/42	280 points
3 Strv m/42	210 points

After seeing the increasingly rapid armour-gun spiral in the war, a new "heavy" tank has been developed to serve as the mainstay for combat formations. The first few tanks have reached some units, but there is still a long way to go before even every Pansarkompani has a single full-strenght Heavy Platoon.

0-1 Motorcycle Recon Platoon

Platoon

HQ Section with:

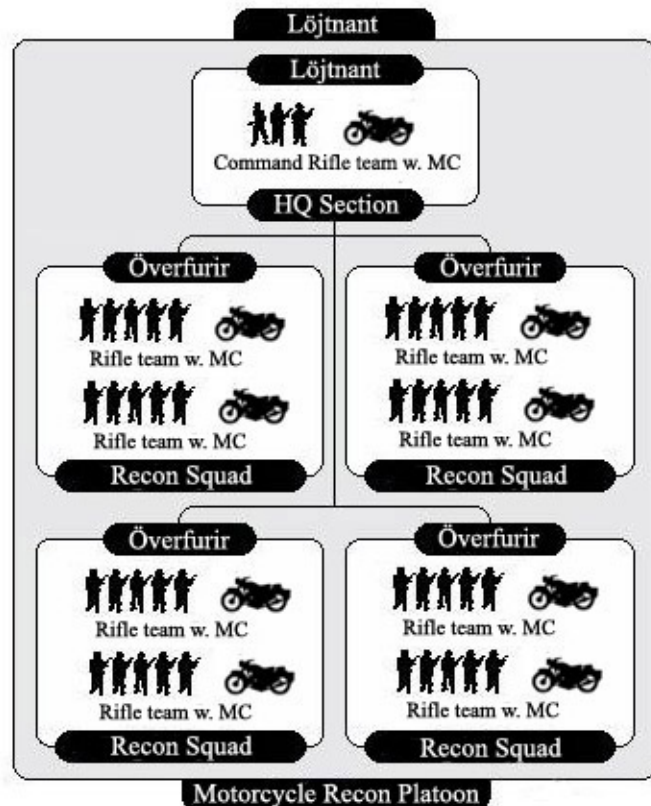

4 Recon Squads	185 points
3 Recon Squads	145 points
2 Recon Squads	105 points

Options

- Replace all Rifle teams with Rifle/MG teams for +10 points per squad.

The motorcycle troops perform scouting duties for the motorised units in the army. They are swift and nimble on the battlefield, and can defend themselves in a pinch, although they are best kept out of harms way.

A Motorcycle Recon Platoon is a Reconnaissance Platoon

0-3 Motorised Skytte Platoons

Motorised Skytte Platoons are organized exactly like ordinary Skytte Platoons, but are transported by Volvo 1.5 ton trucks at a cost of +5 points per squad. If any additional teams such as light mortars or recoilless rifles are chosen then another truck must be added to the HQ section for a cost further cost of +5 points. Any number of Motorised Skytte Platoons may be upgraded to Pansarskytte Platoons. The organisation stays the same but every truck must be replaced by a KP Bil m/42 Armoured Personell Carrier for a extra cost of +5 points per squad or section. A Motorised Skytte Platoon or Pansarskytte Platoon is rated as CONFIDENT TRAINED.

SUPPORT PLATOONS

0-1 Motorised Engineer Platoon

Motorised Engineer Platoons are organized in the same manner as Pioneer Platoons from the Skyttekompani, but must add one 1.5-ton truck to each squad for a cost of +5 points per truck. They may also add a Pioneer Supply 1.5-ton truck to the HQ section for a further +5 points if you wish. The Motorised Engineer Platoon is rated as CONFIDENT TRAINED.

0-1 Light Anti-aircraft Platoon

The Light Anti-aircraft Platoon supporting the armour brigades is organized exactly like the platoons with the same name in the Skyttekompani. The platoon is rated as CONFIDENT TRAINED.

The Armour Brigades

There are three Armoured Brigades in the Swedish order of battle, and while organized in the same manner the equipment they use varies somewhat.

8th Armour Brigade

This brigade is formed around the Royal Skånska Armour Regiment and follow the basic organization closely. No changes are made.

10th Armour Brigade

Organized around the Royal Södermanlands Armour Regiment, this brigade contains Bodens Artillery Regiment, and therefore any Artillery Battery must be motorised with Demag A7 Halftracks, costing +5 points per truck thus upgraded. Its howitzers are the german 105mm leFH18 but this does not change points cost or abilities.

9th Armour Brigade

The 9th is equipped with the Strv m/41, a modified license built Czech TNH tank. Replace all Strv m/40 in the company with Strv m/41 for -5 points per tank. You may not replace them with Strv m/39. The core of the brigade is the Royal Skaraborgs Tank Regiment.

Royal Göta Armoured Guards

Not an armour brigade, but a detachment is equipped as a light tank company and stationed on Gotland. Replace all Strv m/40 with Strv m/37 for -15 points per tank. No Heavy Pansar Platoons may be taken.

Skyttekompani

(INFANTRY COMPANY)

The Swedish Army has grown considerably since the outbreak of the war. Its bulk is made up of heavily armed infantry which has not let the years of relative peace go to waste. Vigorous training, a constantly improving doctrine to match the developments abroad and a steady increase the amount of support weapons has made the Swedish Army well prepared to meet any foe at the border. Should the infantry come face to face with foreign tanks they can rely on support from anti-tank units and artillery, and if on their own they are far from toothless with their new recoilless rifles and flamethrowers.

A force based on a Skyttekompani must contain the following:

- a Company HQ, and
- two or three Skytte Platoons.

Weapon platoons available to a Skyttekompani are:

- a Jägar Platoon, and
- a Heavy Weapons Platoon, and
- two Machine-gun Platoons, and
- a Mortar Platoon, and
- a Light Anti-aircraft Platoon, and
- an additional Skytte Platoon

Support platoons for a Skyttekompani can be:

- an Anti-tank Platoon
- a Regimental Anti-aircraft Platoon
- a Light Anti-aircraft Platoon
- a Heavy Mortar Platoon
- a Pioneer Platoon
- Divisional Support Platoons

You may have up to TWO support platoons for each Combat Platoon you field.

Motivation and Skill

The Swedish army is well-trained and motivated but lacking in experience. The Swedish Skyttekompani is rated as CONFIDENT TRAINED.

HEADQUARTERS

1 Company HQ

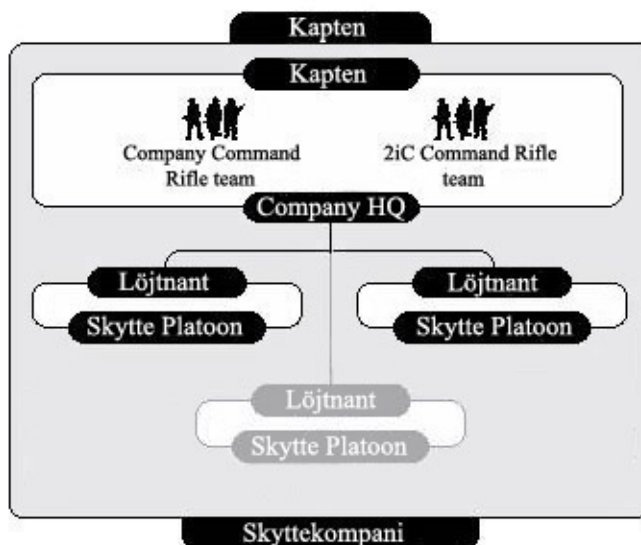

Headquarters

Company HQ 25 points

Options

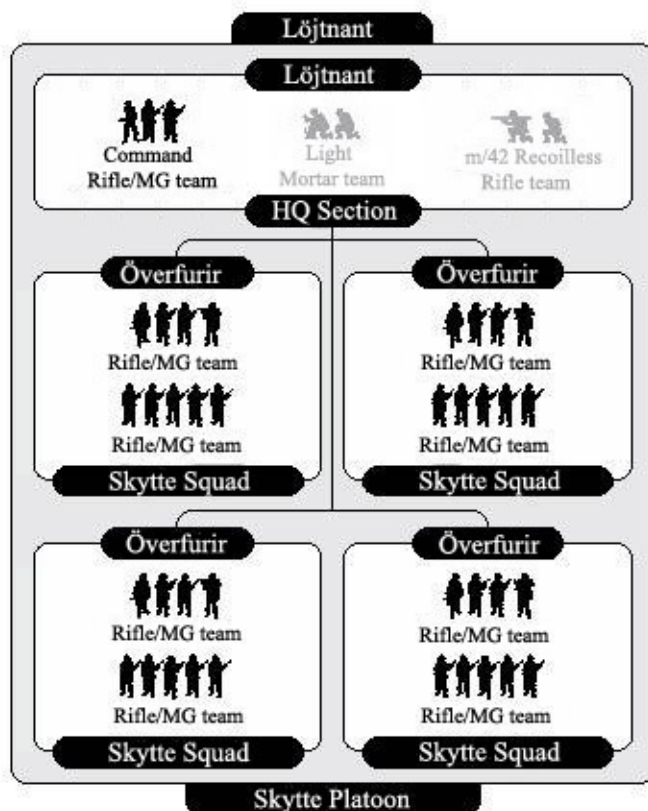

- Replace one or both Command Rifle teams with Command Närskydd SMG teams at +5 points per team

The Swedish Army has a rather laid-back attitude, more reminiscent of Australian command methods than the Prussian tradition. The Kapten (Captain) leading the company typically has close contact with his troops, and morale is usually kept high by a spirit of camaraderie and united purpose. Should push come to shove the infantry will normally try to destroy or push back any enemy forces with their quite impressive firepower, as this method is believed to minimize casualties. If necessary they will dislodge the enemy at bayonet point, but fanatical charges into the enemy guns is not encouraged by either the top brass nor the troops, who can be rather vocal in questions regarding their continued existence.

COMBAT PLATOONS

2 to 3 Skytte Platoons

Platoon
HQ Section with:

4 Skytte Squads	150 points
3 Skytte Squads	115 points

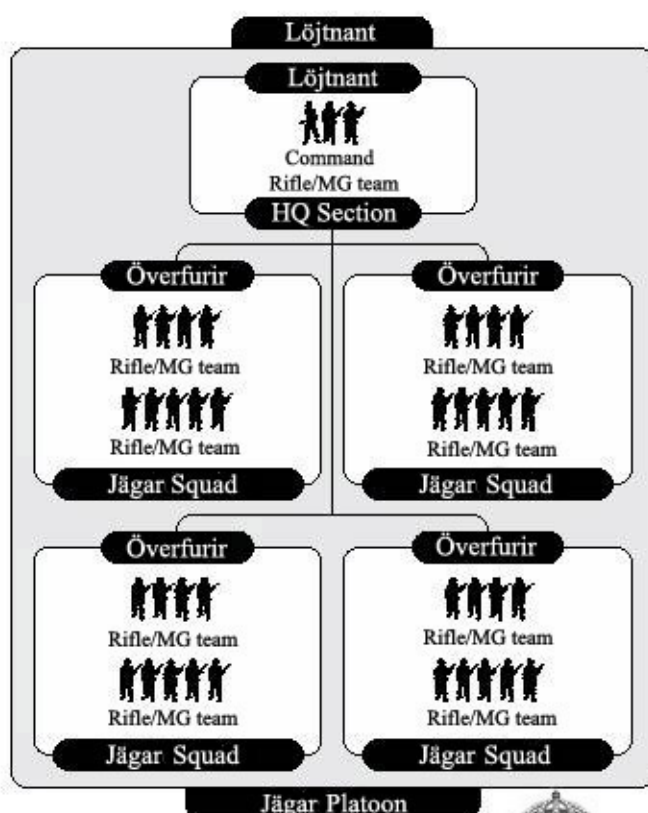

Options

- Replace Command Rifle/MG team with a Command Närskydd SMG team for +5 points
- Add Light Mortar team for +10 points
- Add m/42 Recoilless Rifle team for +20 points

Skytte Platoons pack a lot of firepower with several semi- or fully automatic weapons and portable support weapons. All rifle calibre weapons are of swedish designs and use the same 6.5mm ammunition. The Carl Gustav m/42 20mm recoilless rifle in particular is a very modern and unique design, far more effective than the older clumsy anti-tank rifles used by other nations.

WEAPONS PLATOONS

0 to 1 Jägar Platoon

Platoon
HQ Section with:

4 Jägar Squads	180 points
3 Jägar Squads	140 points

Options

- Replace Command Rifle/MG team with Command Närskydd SMG team for +5 points

Every Skytte Battalion has an organic Jägar Platoon to conduct reconnaissance and other task best suited for light infantry. They operate without encumbering support weapons, but they are not suicidal and carry with them many light automatic weapons that enable them to lay down their own suppressive fire if attacked by the enemy.

A Jägare Platoon is a Reconnaissance Platoon

0-1 Heavy Weapons Platoon

Platoon

HQ Section with:

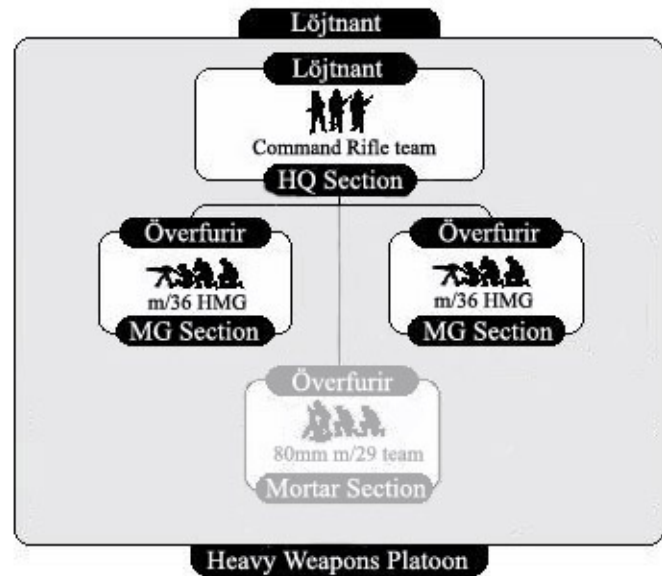

2 Machine-gun Sections 60 points

Options

- Add Mortar Section for +25 points

Every Skyttekompani has a Heavy Weapons Platoon which provides a heavy punch when deployed on the defence.

Heavy Weapons Platoons may make Combat Attachments to Combat Platoons

0-2 Machine-gun Platoon

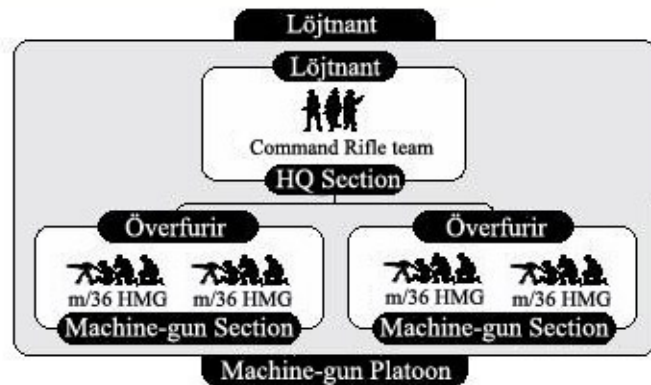

Platoon

HQ Section with:

2 Machine-gun Sections 100 points

1 Machine-gun Section 60 points

The Machine-gun Platoons give the Swedish infantry a heavy defensive capability with their ability to lay down massive volumes of fire in a short time

0-1 Mortar Platoon

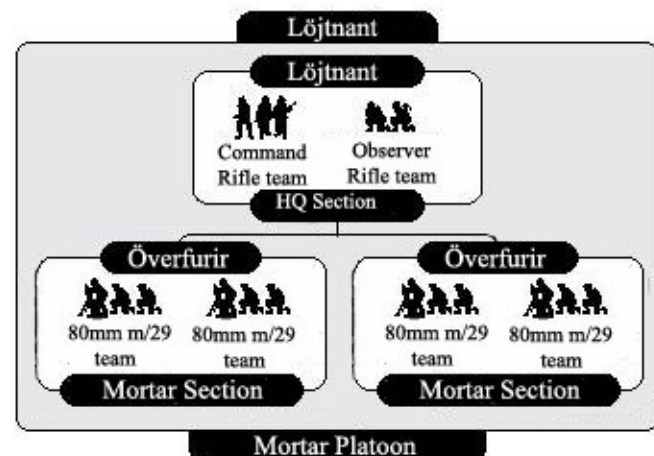

Platoon

HQ Section with:

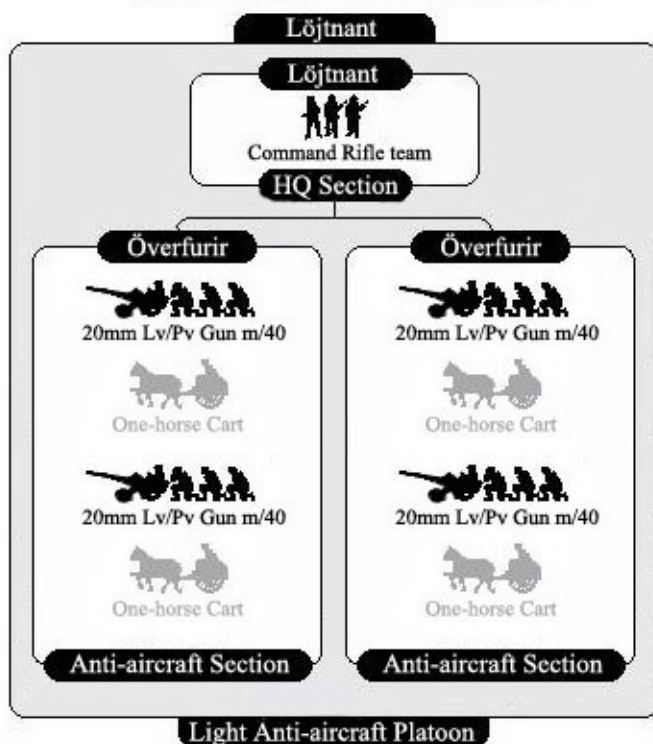

2 Mortar Sections 105 points

1 Mortar Section 60 points

A Mortar Platoon can be decisive in battle, either by continuously bombarding the enemy or by laying down a smokescreen to hide their comrades from the enemy's guns.

0-1 Light Anti-aircraft Platoon

Platoon

HQ Section with:

2 Anti-aircraft Sections	90 points
1 Anti-aircraft Section	50 points

Options

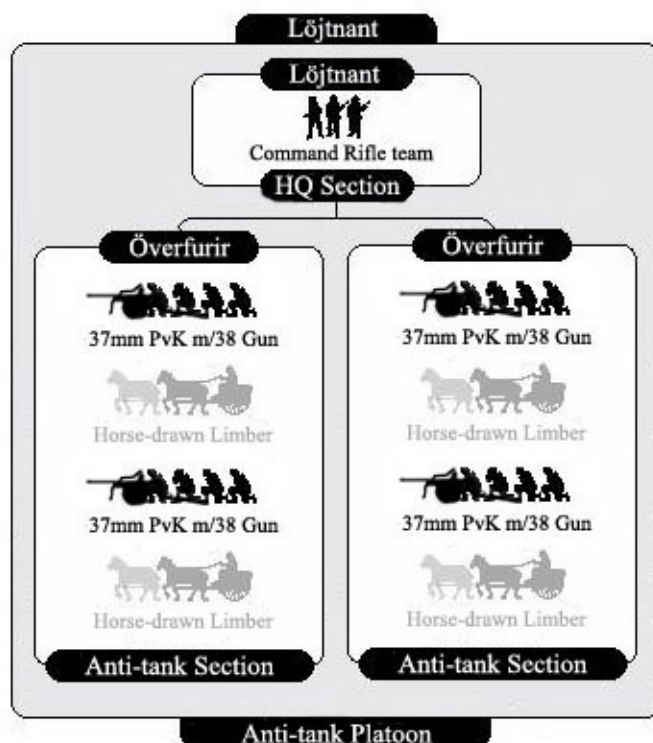

- add One-horse Cart at no cost

Small calibre anti-aircraft guns are considered multipurpose weapons by the Swedish Army. The Bofors model issued to the troops comes with a light ground mount. A simple procedure detached the AA carriage and unfolds the low tripod for use as an anti-tankgun, with somewhat lesser range but easier concealment and better mobility.

Before deployment a Light Anti-aircraft Platoons may dismount from their carriages and use the ground mount instead, as reflected by the appropriate entry in the Armoury. Either all guns dismount or none. If used in their ground mounts the platoon may make Combat Attachments to Combat Platoons.

SUPPORT PLATOONS

0-1 Anti-tank Platoon

Platoon

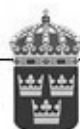

HQ Section with:

2 Anti-tank Sections	70 points
1 Anti-tank Section	40 points

Options

- add Horse-drawn Limber at no cost

The regimental anti-tank platoon is not heavily armed, but their Bofors made guns are powerful enough to damage or destroy both light and medium tanks under the right circumstances.

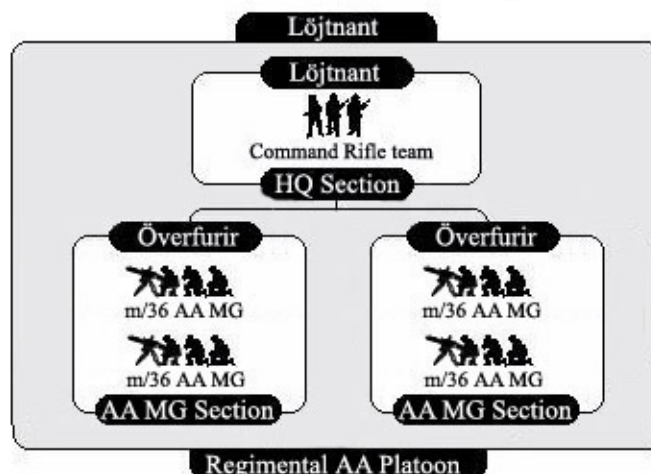

0-1 Regimental Anti-aircraft Platoon

Platoon

HQ Section with:

2 AA MG Sections	65 points
1 AA MG Section	40 points

The Regimental Anti-aircraft Platoon protects the infantry from low flying attack craft with their rapid firing twin mounted machine-guns. When a Battalions own Light AA Platoon is deployed for ground work and enemy air is pressing hard then this platoon can relieve the pressure somewhat.

0-1 Light Anti-aircraft Platoon

Platoon

HQ Section with:

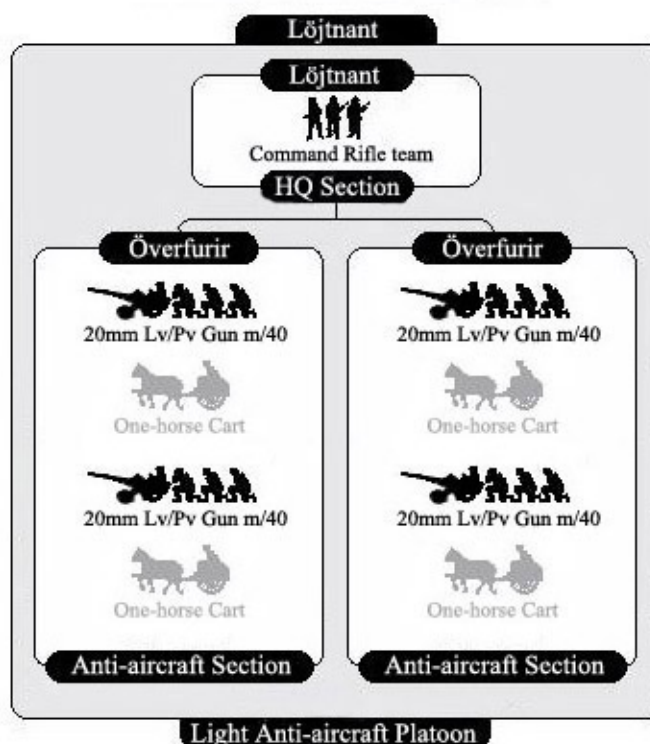

2 Anti-aircraft Sections	90 points
1 Anti-aircraft Section	50 points

Options

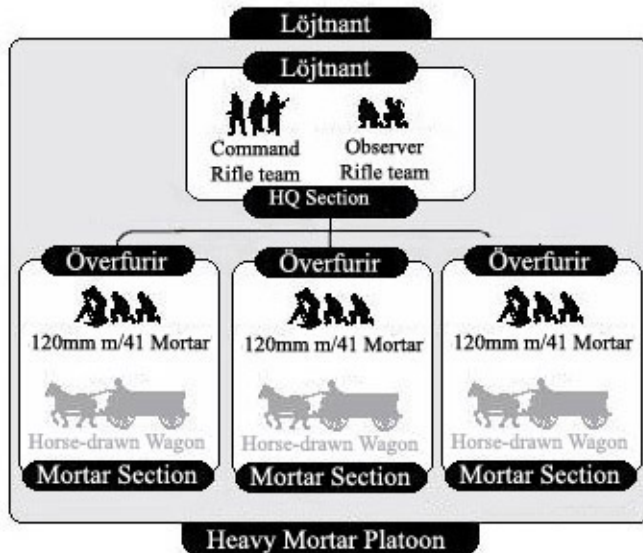

- add One-horse Cart at no cost

Small calibre anti-aircraft guns are considered multipurpose weapons by the Swedish Army. The Bofors model issued to the troops comes with a light ground mount. A simple procedure detached the AA carriage and unfolds the low tripod for use as an anti-tankgun, with somewhat lesser range but easier concealment and better mobility.

Before deployment a Light Anti-aircraft Platoons may dismount from their carriages and use the ground mount instead, as reflected by the appropriate entry in the Armoury. Either all guns dismount or none. If used in their ground mounts the platoon may make Combat Attachments to Combat Platoons.

0-1 Heavy Mortar Platoon

Platoon

HQ Section with:

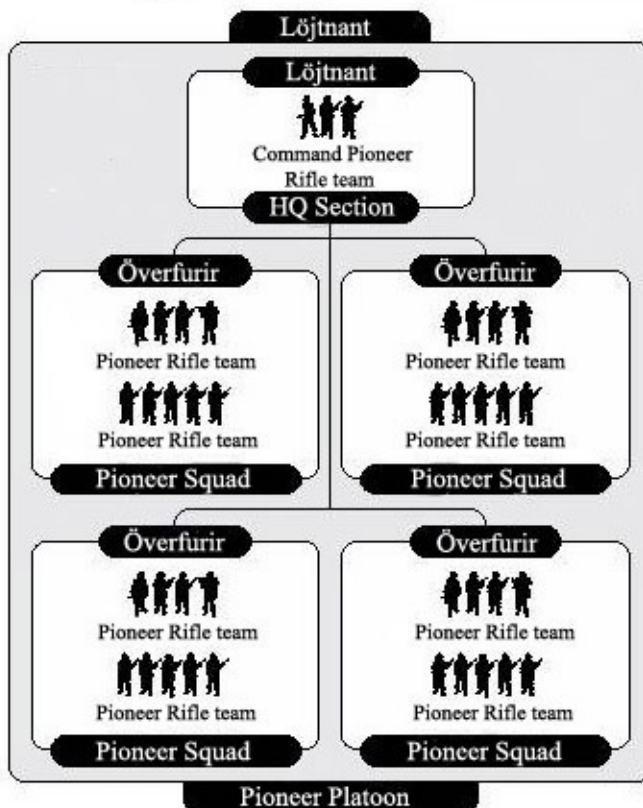

3 Mortar Sections	120 points
2 Mortar Section	80 points

Options

- add Horse-drawn Wagon at no cost

Heavy Mortars are fearsome weapons whose powerful grenades can cave in a trench section or hurl shrapnel large enough to kill a man for hundreds of yards. The Swedish Army has adopted a copy of the Finnish 120mm Tampella m/40 after seeing its efficiency in the Continuation war, now under the designation m/41 they provide heavy support the infantry regiments.

0-1 Pioneer Platoon

Platoon

HQ Section with:

4 Pioneer Squads	160 points
3 Pioneer Squads	120 points
2 Pioneer Squads	85 points

Pioneers have a important role on the battlefield, equipped with explosives, flamethrowers and other tools they can destroy enemy fortifications with ease, or if need be knock out tanks in close assault. They should not be squandered on suicide missions however, and only working together with the Skytte Platoons can the Pioneers reach their full potential.

You may replace up to two Pioneer Rifle teams with Flame-thrower teams at the start of the game before deployment

Divisional Support

Any Pansarkompani, Motorised Skyttekompani or Skyttekompani may have the following support platoons

- A Medium Anti-aircraft Platoon
- A Heavy Anti-aircraft Platoon
- An Heavy Anti-tank Platoon
- An Artillery Battery
- An Armoured Cavalry Squadron

Motivation and Skill

The supporting elements of the Swedish divisions are as well trained as the troops they support. Divisional Support Platoons are rated as

CONFIDENT TRAINED

Air Support

You may request Sporadic Air Support at a cost of +100 points. Sporadic Air Support will provide you with supporting SAAB B 17 dive-bomber aircraft.

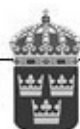

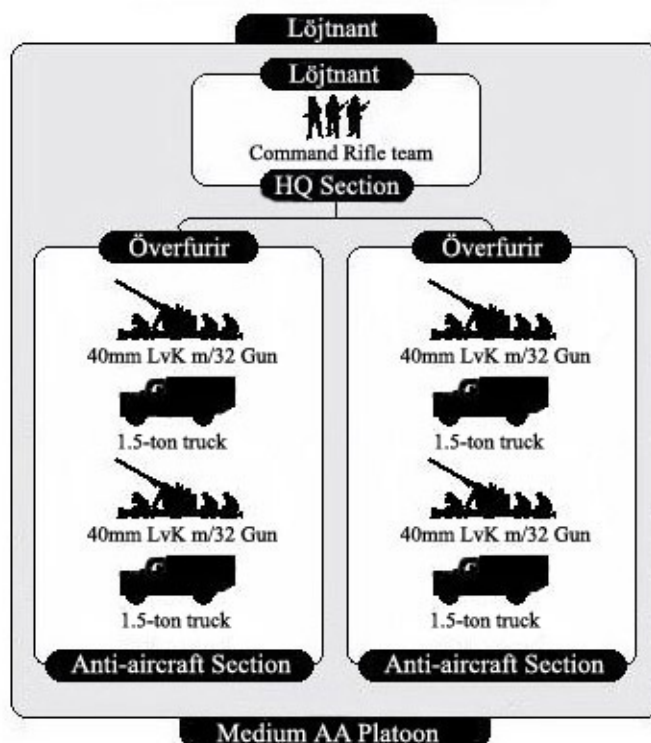

0-1 Medium Anti-aircraft Platoon

Platoon

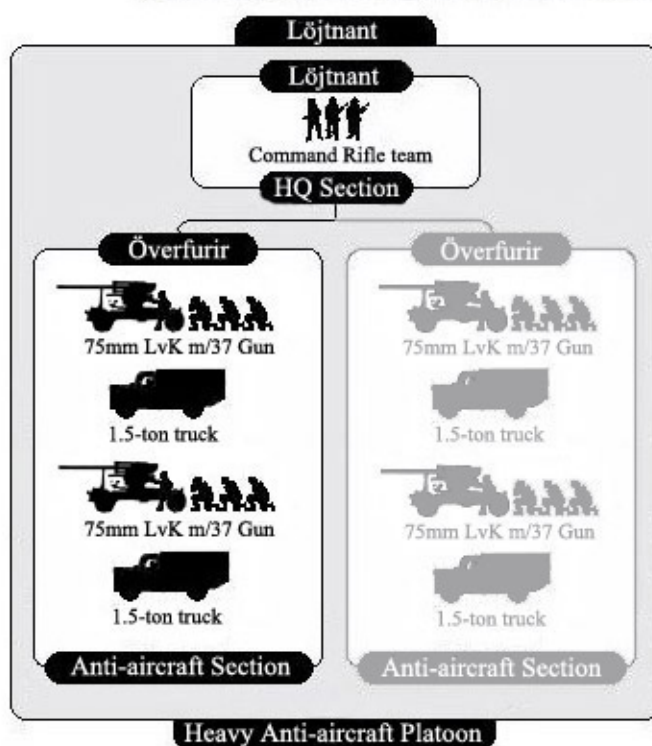

HQ Section with:

2 Anti-aircraft Sections	125 points
1 Anti-aircraft Section	65 points

Armed with the proven 40mm Bofors gun, the Medium Anti-aircraft Platoons is a deadly threat to both airplanes and soft-skinned vehicles who come within range. As it is a fully automatic cannon, it is somewhat cumbersome so a wise commander should emplace them with care.

0-1 Heavy Anti-aircraft Platoon

Platoon

HQ Section with:

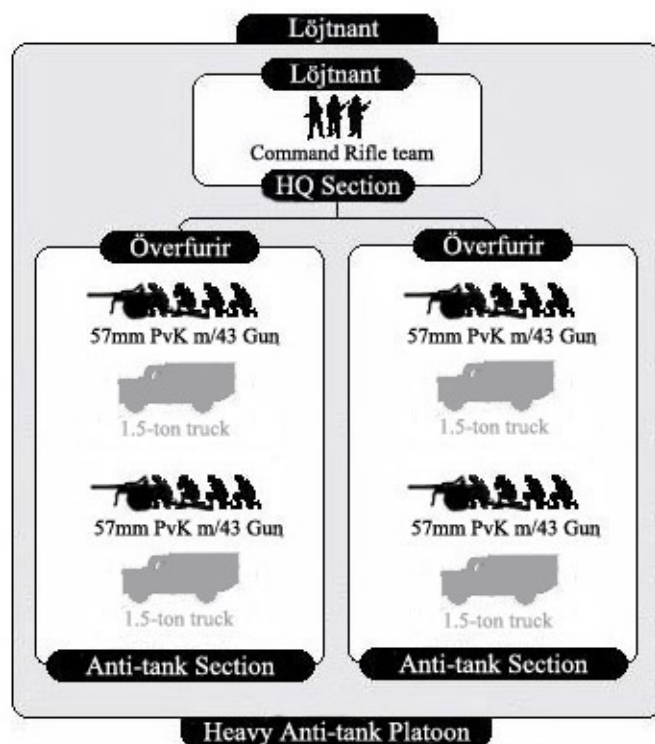

2 Anti-aircraft Sections	240 points
1 Anti-aircraft Section	125 points

Supplied with armour-piercing ammunition the heavy Bofors semi-automatic cannons are a serious threat to both tanks and bombers. Despite this, they are best kept behind the lines unless the situation is truly dire, since they are large targets and lack crew protection.

If a Heavy Anti-aircraft Platoon is taken then no Heavy Anti-tank Platoon or Medium Anti-aircraft Platoon may be taken, since the heavy guns are only used on the front lines if no other option exists.

The second AA Section may **ONLY** be taken if more than one Skyttekompani is fielded. So normally only one section is available. You may only ever field one HAA Platoon no matter how many companies you field in total.

0-1 Heavy Anti-tank Platoon

Platoon

HQ Section with:

2 Anti-tank Sections	130 points
1 Anti-tank Section	70 points

Options

- add 1.5 ton trucks for +10 points per section

Every Division has a special anti-tank company which fields the heaviest anti-tank guns produced in Sweden. The PvK m/43 is the latest development of the old Bofors 37mm AT gun widely exported, and it is a significant improvement over its smaller cousin.

0-1 Artillery Battery

Platoon

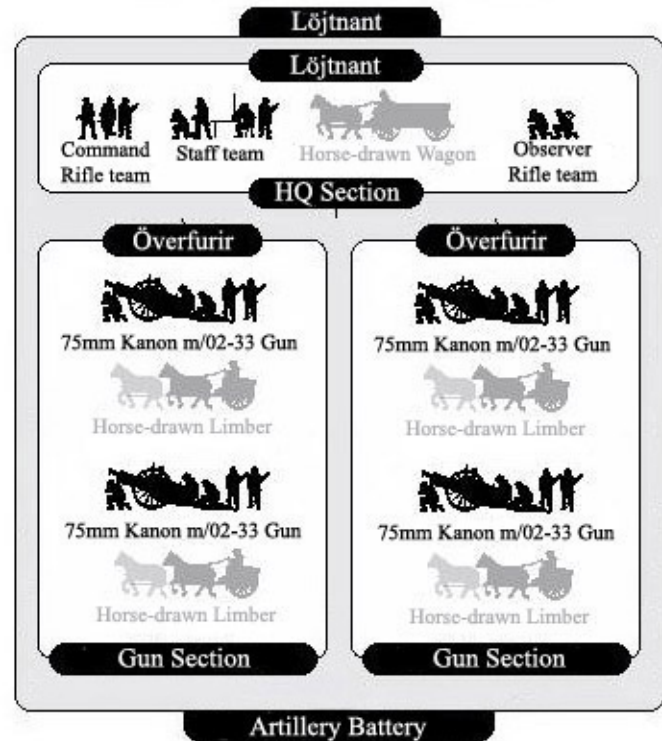

HQ Section with:

2 Gun Sections	130 points
1 Gun Section	75 points

Options

- add Horse-drawn Limber at no cost
- replace Horse-drawn Limbers with 1.5-ton trucks for +10 points per Gun Section and +5 points for the HQ Section
- replace all 75mm Kanon m/02-33 with 105mm Haubits m/40 for +20 points per Gun Section

The artillery regiments are equipped with a mix of old and new guns, but regardless of the vintage they use them effectively with modern signals and spotting technology. Within minutes they can strike a heavy blow against enemy troop concentrations when called for.

0-1 Armoured Cavalry Squadron

Platoon

HQ Section with:

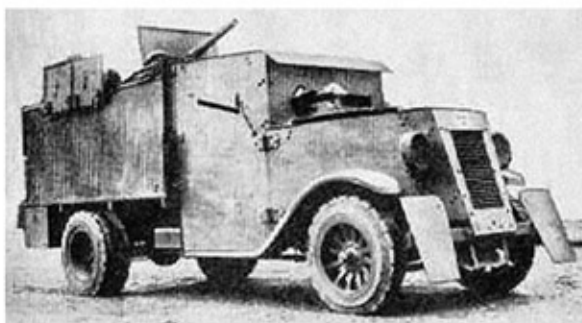

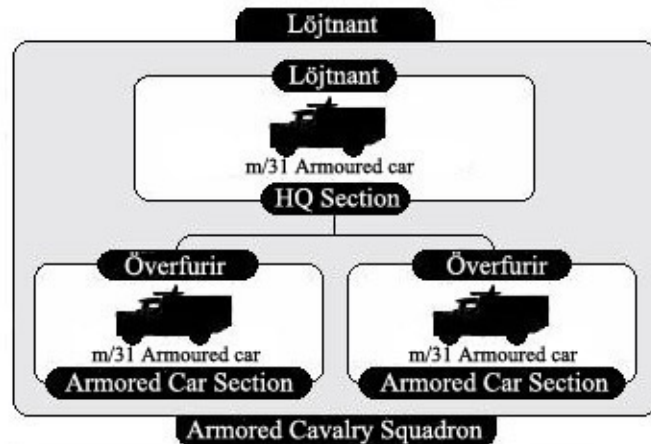

2 Armored Car Sections	75 points
1 Armored Car Section	50 points

Options

- replace m/31 Armoured Car with m/40 Armoured Car for +15 points per car

The armoured cavalry provides the Army with fast recon vehicles. Armoured Cars has long been out of favour in Sweden so few modern cars are available, but the cavalry has to make do with what is at hand.

A Armoured Cavalry Squadron is a Reconnaissance Platoon

Swedish Special Rules

Homeland of Bofors

The Bofors company sold its famous 40mm anti-aircraft gun worldwide but the Swedish Army took special interest in their products. They placed heavy emphasis on anti-air defences, both mobile and fixed, of all types and calibres. Training methods and sights were advanced resulting in a number of shot down airplanes intruding on Swedish airspace during the war.

Any Swedish team with the Anti-aircraft rule firing at airplanes gains a reroll to their skill test to see if they hit.

Mit Land, Min Gud, Min ære

This is the motto of the King of Denmark at the time. The Danish troops are determined to not give up an inch of liberated ground if they get the chance to strike back at the invaders. Denmark will be free, and if it must be at the point of a bayonet then so be it!

Danish troops fielded under the Save Denmark scenario rules gain the British Bulldog rule

Frihed ble oss født

The line from the Norwegian national anthem represents the thirst for freedom, and the Norwegian troops trained in Sweden are spoling for a fight with the Quislings and the Germans who back them up. They will not back down until Norway is liberated or every man is unable to fight.

Norwegian Politi troops using the rules in the Save Norway Scenario gains the Carry on Sergeant special rule.
