

Installation procedure:

1. Log in to the machine as local Administrator.
2. From the network <\\bassnas\readybass\users\kiddm> move the file clipper.zip to the local machine.
3. Unzip the file to the C: drive. If not already present a new path will be created
C:\Program Files\ESPN\clipper
4. From the shortcut folder move the Tagger/Clipper/QA icon(s) (any or all depending on the setup) to C:\Documents and Settings\All Users\Desktop. This will make the shortcut(s) available to all users on this machine on their desktop by default.

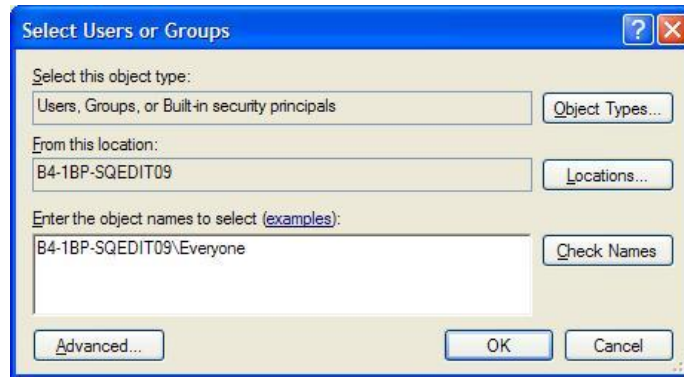

5. Right-hand click on the Tagger icon (or clipper/QA) and select properties, select the Security tab.

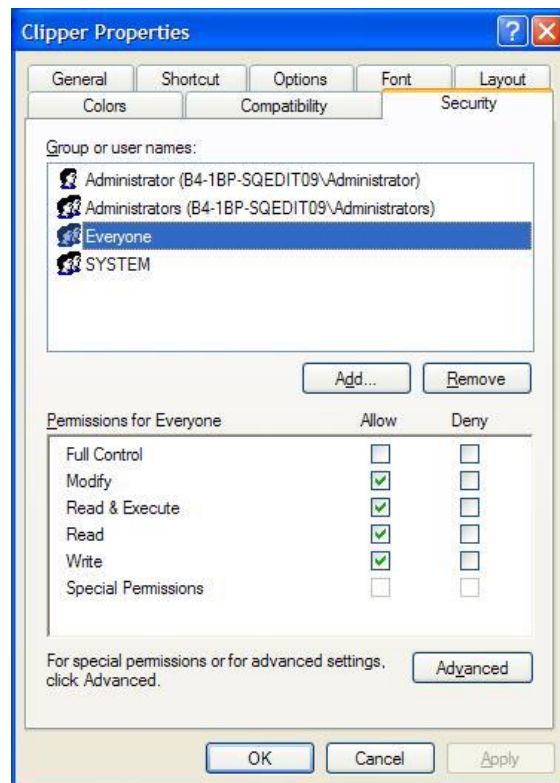

6. If **Everyone** is not a user under **Group or usernames** than click **Add...**

- At the pop up window under **Enter the object names to select** write **LOCAL_MACHINE_NAME\Everyone**. In the example below the local_machine_name is B4-1BP-SQEDIT09. Click ok.

- Back at the security tab select **Everyone** and in the **Permissions for Everyone** check the **Read & Execute** box.

- Log out and sign in as another user. The icon(s) should appear on the desktop and execute the program by double clicking.
