

anagrow and hair problems

Anagrow is a magical swiss-treatment in which the plant stem cells extract are used to solve hair problems.

This is an absolutely non surgical, non-invasive treatment and it is ideally used for hair thinning problems.

Anagrow helps in fighting back the 5 signs of hair loss and they are scanty hair, decreased growth, hair loss, decreased volume and decreased density.

Anagrow actually helps in improving the growth of the existing hair and it also improves in decreasing hair fall to a great extent. These plant stem cells have a unique property of increasing the growing phase of the hair that is the anagen phase and decreasing the falling phase of the hair that is the telogen phase.

This treatment helps in following ways...

1. It improves the growth of the existing hair by 85%.
2. It helps in the restoration of hair regeneration by 78%.
3. It helps in decreasing hair fall by 56%.

Lets get into the detail of each of these advantages of the Anagrow treatment to understand the real benefits that one can get after completing the entire course of the treatment.

1. It improves the growth of the existing hair by 85%.

This magical treatment helps in improving the growth of the existing hair by 85% which simply means that it improves the thickness and the length of the hair.

This could be the reason why one generally experiences improvement in the thickness of the hair as well as the length of the hair after completing 12 sessions of this treatment which is carried out on a monthly basis.

2. It helps in the restoration of hair regeneration by 78%.

There are certain follicles which are dormant in its nature which simply means that they have gone into the sleeping phase. Also there are certain follicles which produce very fine hair.

This treatment can actually help in restoring the hair regeneration by 78% so that these follicles start producing hair which are of better quality in terms of its thickness and the length.

One important point which you need to understand is that it does not work on dead follicles and therefore it will not give new hair from the follicles which have already died off.

3. It helps in decreasing hair fall by 56%.

As it improves the growing phase and decreases the falling phase this treatment helps in decreasing the hair fall by 56%.
