

## Addition of the “Reference Consist” field to Work Order Tracking(Tr)

Users will notice that a “Reference Consist” field has been added to the list view.

This field enables users to easily search for Work Orders raised against a whole consist, ie. Overnight Exams for HST and all trailer exams for 91/225.

The differences between the “Live Consist” and “Reference Consist” are explained below:

- Live Consist comes from the GENIUS interface and will show the assets currently allocated to it.
- You CANNOT raise a Work Order against a Live Consist
- You may raise a Work Order against a Reference Consist (as you do presently) but only PM Work Orders should be raised this way, where current process allows.
- Reference Consist contains the vehicles in that consist at the time of raising a Work Order. If a vehicle has since been reallocated, it may have a different Live Consist
