

Düsseldorf, Germany - November 12, 2014 – ZONARE Medical Systems, Inc., the developer of next generation ultrasound technology, announced today that it would be introducing two new advancements to their product lines at the annual MEDICA meeting November 12th -15th in Düsseldorf, Germany.

ZONARE continues its z.one product line with the introduction of the Z.One PRO. This all-purpose, durable, ergonomic, easy to use system pushes the boundaries of ultrasound with affordable and powerful performance. The Z.One PRO covers all applications, from pediatrics to geriatrics, with stellar image and Doppler quality and is built on ZONE Sonography™ Technology, the innovation that has broken the barriers to conventional imaging.

ZONARE is also proud to present the 2014 performance advancements for the ZS3, a premium ultrasound system. With a complete range of transducers from 1-20MHz for CEUS, a new intraoperative curved array transducer (C9-3sp CEUS enabled), outstanding imaging performance from the linear 20-5MHz transducer, and an extensive 5 year, state-of-the-art protection program, it is easy to see why this system is the new diagnostic standard with premium performance and unique investment protection.

Both the Z.One PRO and the ZS3 ultrasound systems have breakthrough, proprietary ZONE Sonography™ Technology (ZST™). ZST has replaced conventional line-by-line beamforming with software-driven, large zone image acquisition technology. This technique overcomes conventional limitations by acquiring more sonographic information and guaranteeing the entire ultrasound image is in focus, at every point and at every depth. This novel approach to image formation brings exquisite imaging detail with consistent, superb resolution and uniformity at depth from the smallest to the largest of patients throughout the field of view, enabling the most accurate diagnosis possible. This is the ZONARE difference.

“We are very excited to show our customers the clinically focused imaging advancements we have made with the Z.One PRO and the ZS3. Both systems are ideal for internal medicine, shared services, pediatrics/neonatology and both systems have small footprints so that they can be easily moved from medical

departments to patient bedside. Our customers expect superior imaging for all of their application needs and they know that they can count on ZONARE's Living Technology to keep them at the cutting-edge of imaging developments," commented Andrea Franke, Managing Director of ZONARE GmbH.

ZONARE will be demonstrating the Z.One PRO and the ZS3 at MEDICA Hall 9 B26.

About ZONARE

ZONARE is solely dedicated to ultrasound excellence through its innovative, award-winning next generation technology which provides the platform for the company's Living Technology designed to meet its customers evolving imaging needs. The patented design and Zone Sonography™ Technology (ZST) architecture of the Z.One PRO and ZS3 platforms deliver high-end image quality and clinical versatility. All ZONARE products are RoSH compliant. ZONARE is an independently run, wholly owned subsidiary of Mindray Medical International. For more information, visit www.zonare.com.
