**Subject: Standard Gage bore and snap gauges phase out**

Dear Valued Distribution Partner,

As part of our continuous improvement process under TESA new management guidance, we are currently reviewing and streamlining our product portfolio.

We would therefore like to inform you that production of our Standard Gage bore and snap gauges will be discontinued as of February 1, 2015. New orders will be accepted subject to availability. This applies also to spare parts not under warranty.

We are however happy to suggest the following alternative products:

- Two-point contact interior measurements can be performed efficiently by the TESA Veribor Bore Gage. With the ability to detect form and shape deviations on bores and holes, its low-clearance circular articulation offers high repeatability of measurements.
- Your external measurement needs are covered by classic instruments such as TESA micrometers.

Be assured that the quality of our products and services is our main concern at all times. The objective of this rationalization is to serve you better, by focusing on improvements in service and shipments schedules.

Please contact your local account manager if you have any questions.

Kind regards,

Blaise Vuille  
Sr. Product Line Manager
