

Global Mass-Payments Made Easy

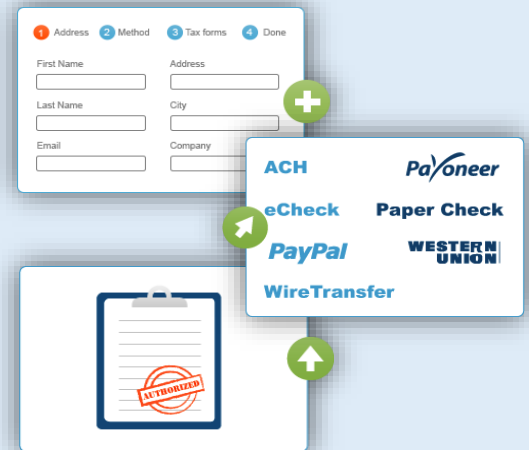

Global payments · Multiple payment methods · Local currencies · Compliance · Governance · Cross border reconciliation · Transparency · Cost effectiveness · Simplicity

The above are just some of the challenges you are faced with when paying your payees.

Paying professionally is a formidable task.

Tipalti makes this task simple and frictionless:

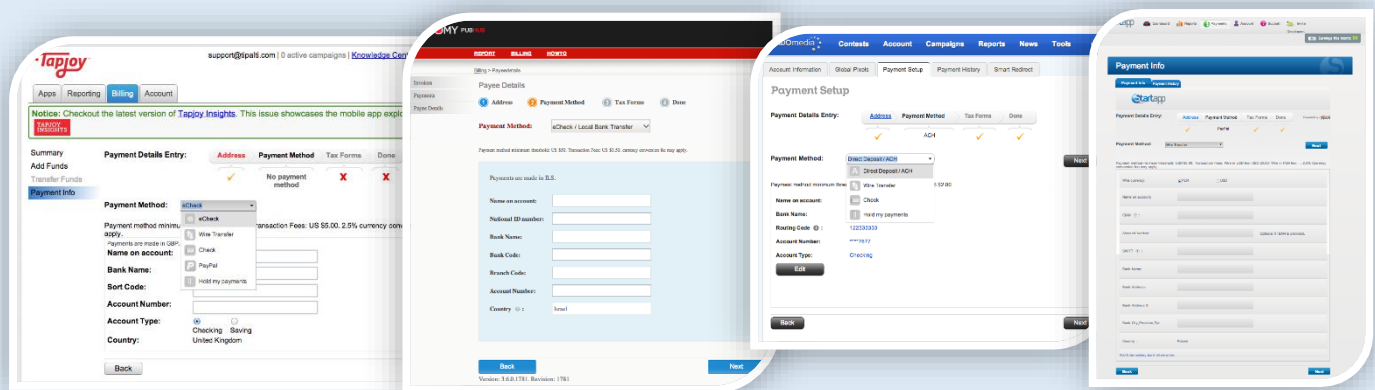

- Supporting multiple payment options, optimal for the various geographies your providers come from (PayPal, wire transfer, ACH / Direct Deposit, check, Global ACH / Local Bank Transfer, prepaid debit cards, cash via Western Union ...).
- Supporting payments in the local currency.
- Collecting all the information required by the local regulations for wires to complete successfully (e.g. IFSC code in India, tax ID in Russia, Sort code in the UK, etc.).
- Comply with tax related requirements - i.e. collect W-9 (if you are a US company) or invoices (in other geographies) and withholding payments to payees that did not submit the required forms.
- Comply with AML / Anti-terror / Anti-narcotics regulations that require you to validate each payee against "black-list" databases before you pay.

Tipalti does that via a very simple interface that hides all these complexities from you and helps you eliminate efforts around payments while improving your offering to your payees.

As the payee pays the transaction costs (you can configure it differently), the cost to you as the payer is negligible.

The Tipalti solution is completely white labeled, and appears as part of the payer web site, with the same look & feel.
