MonoX™ NeON

LG300N1C-B3

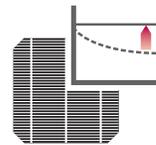

60 cell

Introducing MonoX™ NeON module series, which uses highly efficient n-type materials, an elaborate process control adopting a semiconductor processing solution and a double-sided structure. Our R&D concentrates on developing a product that is not only efficient, but strives to increase practical value for customers.

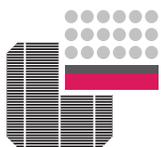

N-Type Material

MonoX™ NeON uses n-type cells, boasting higher mobility of electric charge, resulting in higher generation efficiency.

Near Zero LID (Light Induced Degradation)

The n-type cells used in MonoX™ NeON have almost no boron, which may cause the initial efficiency to drop, leading to less LID.

Nano Level Control

MonoX™ NeON uses the Nano-level process control predominant in semiconductor processing process, which ensures less electric loss from internal defects.

Double-Sided Cell Structure

The rear of the cell used in MonoX™ NeON is designed to contribute to generation; the light beam reflected from the rear of the module is reabsorbed to generate a great amount of additional power.

About LG Electronics

LG Electronics is a multinational corporation committed to expanding its capacity with solar energy business as its future growth engine. Our solar energy source research program was launched in 1985, backed by LG Group's rich experience in semi-conductors, LCD, chemistry and electronic materials industry. We successfully released the first MonoX™ series to the market in 2010 which exported to 32 countries in 2 years. In 2013, MonoX™ NeON won "Intersolar Award", which proved its leading innovation in the industry.

Mechanical Properties
