WORDS & PHOTO BY KJELL ELLEFSON

Canon-1D X: MSRP \$6,799 (Body Only)

The 1D X is the most advanced — and expensive — camera offered by Canon, but its ability cannot be understated. It features a full frame 18.1 megapixel CMOS sensor and dual Digic 5+ processors that allow it to shoot high quality photos at 12 frames per second that allows it to catch every piece of action of that skier in motion. The camera also includes a 61-point auto-focusing system and an ISO from 100-51200, which means sharp, low noise photos even in low-light conditions. And did we mention it shoots full 1080p HD video?

Canon EF 70-200mm f/2.8 IS USM: MSRP \$1,999

One of Canon's most popular lenses among professional photographers is this telephoto zoom lens. It features an image stabilization system that will reduce blur and camera shake. The low aperture ability at full zoom allows you to capture low depth-of-field images from long distances. It is arguably the most versatile lens on the market and is a must have in the camera bag.

Alien Bees B800 Flash Unit: MSRP \$279.95

This portable flash head packs a 320 W punch in a small size. It has six f-stop power variability and can recycle to full power in one second. The lamp is internally cooled by a fan and weighs only 2.9 lbs, so it is easy to carry up on the hill for that added fill light that makes your photos pop. And for those who are into the look of the gear, the B800 is available in five colors including white, pink and neon green.

Cybersync Transmitter Plus and Receiver (Battery Powered): MSRP \$59.95 and \$69.95

Your portable flash head would be useless if you couldn't sync the flash timing with your camera. This very simple transmitter and receiver duo can interact up to 350 ft and change frequency with the turn of the knob. The transmitter mounts directly to your camera's hot shoe and the receiver plugs in to almost every flash unit made. The ease of use and the quality of these radio transmitters and receivers is simply stunning.

Paul C. Buff Vagabond Mini Portable Power Pack: MSRP \$239.95

Added light can exponentially enhance any action photo, but it can be hard to come by when there are no outlets in the outdoors. Enter the Vagabond Mini lithium battery pack that powers those off camera flash units. The unit is a 120 VAC power source that can power up to four flash units at once and can be fully recharged in only three hours. It also maintains its battery life by clipping directly to the light stand rather than draining it by sitting in the snow.

Klik Contrejour 35 Photo Pack: MSRP \$305.10

This 1800 cu in photo pack is the perfect choice for skiers as it incorporates outdoor specific features like a hydration sleeve and a tuck-away rain fly. The lightweight 4.12 lb camera case holds any pro-body SLR as well as any lens in your arsenal. And of course it features extra miscellaneous pockets and straps for your skis and tripod. Along with the internal aluminum frame, the padded hip and shoulder straps allow for ultimate control while skiing with your precious gear.

POW Transflmer Mitten: MSRP \$65

Whipping your bare hands out during a freezing day or trying to operate a camera with clumsy gloves are some of the last things photographers want to do. The Transflmer mitten features a convertible nylon flap that covers a three and a half finger glove. The flap can then be peeled back, which leaves your pointer finger free for optimum camera functioning. It also features Gore Tex Windstopper technology with 40g of Thinsulate insulation and a comfortable goat leather palm.
