

## Razor Packaging - redefining what's possible

A fully defined and tolerance 3D CAD model of a sleek and eco-friendly packaging design was required by a packaging company in Central London. The design comprised of an integrated compartment for replacement blades and a secure holding mechanism for the razor body itself. Most of the design was simple but a central support for the razor body featured a smooth elegant curve to match the design of the razor.

## A design that fits like a glove

CADmate had successfully created the 3D CAD model with precision true to a blade itself. The organic geometry relied on pain-staking efforts to achieve the correct final result requested by the concept art.
