

NEUROLOGICAL TECHNOLOGY INCREASES PITCHING VELOCITY **4+ MPH** Permanently

With our patented POV technology and proprietary training protocols, we are able to neurologically train pitchers to INCREASE their fastball 4+MPH in as little as 10 days, and MAINTAIN velocity for entire games without fatigue or soreness. By training the NERVOUS SYSTEM, we are able to strengthen players physiologically in ways traditional training could never replicate. With more than **800+ NFL and MLB Superstars** as clients, we have now tailored a neurological training program that takes a pitchers performance to levels they never thought possible! Imagine adding 4, 5 even 7+ MPH to your pitching velocity and having the ability to maintain it 9 innings!? What would that do to your scholarship chances? Your chances of playing pro ball? With this patented and proprietary program **NOW YOU CAN.**

WHY WE ARE SUCCESSFUL

We are able to train your Agonist and Antagonist muscles simultaneously (biceps/triceps for example), allowing them to absorb more force and create more force which in turn means pitching at a much **HIGHER VELOCITY**. Traditional training **CANNOT** do this.

The NERVOUS SYSTEM powers everything and is the foundation for physiological performance. By training and strengthening the nervous system with our system, we are able to strengthen you **PHYSICALLY** in ways weights and resistance training could never replicate.

Using this system on a Major League pitcher we were able to INCREASE his fastball 5 MPH in under 2 weeks without EVER throwing a pitch! Why? Because in the first part of your training we are able to neurologically break the compensation patterns ("bad habits") that are hindering your performance and this **ALONE** increases pitch velocity even **BEFORE** we start the training! Within your first 2 days you will see noticeable results.

Maintain your VELOCITY for entire games! As a game goes on you become sore as your muscles go into "concentric contraction" (shorten). Once this occurs, velocity drops and you become susceptible to injury. When you train on our system, however, your muscles are conditioned to stay in **ECCENTRIC CONTRACTION** (lengthened) for longer periods of time allowing you to maintain **MAX VELOCITY** without soreness...virtually eliminating the chance of injury.

INCREASES PITCH VELOCITY IN WAYS TRADITIONAL TRAINING NEVER COULD

Your muscles are **CONTROLLED** by your nervous system and if they are not firing on all cylinders, it means your "software" (nervous system) is **NOT working at peak capacity**. ALL the physical training and pitching mechanic exercises in the world are **USELESS** unless your nervous system is working efficiently and when it does... Watch out! That's what separates this training from everything else you have done.

With our patented POV technology and proprietary training protocols, we are able to send neurological information to the brain and nervous system that your muscles are training at **MAXIMUM VELOCITY (your nervous system will be receiving stimulus at up to 245 X per second)**, and thus a 10 minute Velocity Pitching session with our system equates to about a 2 hour session with the training techniques you are using now, however, throwing in perfect neurological position.

What's more, we are building a stronger more dynamic nervous system that will allow you to display a **HIGHER PITCH VELOCITY** for longer durations of time while maintaining a peak level of performance without soreness and without fatigue. If you are truly ready to add 4, 5 even 10+MPH to your pitching velocity with a system of training unlike anything you have ever experienced, call or email us to schedule a **FREE TRAINING SESSION** and **CONSULTATION**

CASE STUDY

A Texas junior college pitcher came to us in the hopes of increasing his velocity, which was hovering around 88MPH, sometimes hitting 90MPH. After only 4 treatments he was able hit 92 and after 10 sessions got to 94 but more importantly was able to maintain 88-92 for **ENTIRE GAMES** (averaging 90+MPH) without fatigue or soreness. He can now maintain 90+MPH for 9 innings and recently signed with Texas Tech.
