- ✓ Unit weighs 9 lbs.
- ✓ Split application
- ✓ Dual tube distribution

Benefits

Goes with Features

- ✓ Minimal cost with fast conversions
- ✓ Stays on boom when units removed
- ✓ Moves easily through crop canopy
- ✓ No erosion
- ✓ Less weight & fatigue on boom
- ✓ Nutrients closer to root zone
- ✓ More accurate product flow

Testimonials

Just wanted to let you know I went out and did 80 acres yesterday real quick. It worked flawless. And with having the extra two on the right hand side, you can do the end rows, and flip them up, and drop the other two and your going in a hurry. Works great! At 10 gallons, you can see the strips of liquid on the ground. It's just a nice stream coming out a couple inches away from the plant. I think the only way it could be better is if it was maybe a little closer to the plant itself. But that would make it similar to a planter where you need to go a certain speed at all times to keep the accuracy. But your talking 2 inches at most. Well I think right now, and I would have to measure, but I believe it's within 6". But could be made to go about 2" closer. But like I said, you would have to slow down. Getting it closer I think you would need to do a better job of driving. Right now, I wouldn't change a thing on it. I was going 9mph to get it to come out to 10gpa. And it worked great at that. If you ever have anyone interested, have them give me a call or send them here to take a look. It works great in my mind.

Used my NutraBoss units last week. 670 acres in two days. No problems at all with your equipment!! Thanks. Worked great.
