Encounter-Level Documents - 8/26/14:

Scan on 9/2/2014 6:47 AM (below)

Permit for Cardiac Stress Testing

I hereby consent to voluntarily engage in a test to help determine the state of my circulation that is designed to help to aid my physician in diagnosing my condition.

I have read the following information and I have asked questions which I have been satisfied with. I understand the risks and benefits of this test.

The test which I will undergo will be performed on a treadmill with the amount of effort increasing gradually. This increase in effort will continue until symptoms such as fatigue, shortness of breath or chest discomfort may appear which would indicate to me to stop.

The test I will undergo will involve the intravenous administration of

Dobutamine Dopamine Adrenaline **Levterenol**

There are certain risks involved during the test. They include:

- * Falls, any injury a person may sustain from a fall
- * Abnormal blood pressure
- * Discomfort of breathless (such as too rapid, too slow, or irregular heartbeat)
- * Dizziness
- * Head attack (eye sore headache, with dizziness being usually less than 1 in 1,000)
- * Any complication from heart attack including death.

Every effort will be made to minimize those by the preliminary examination and my observations during the testing. Resuscitation equipment and trained personnel are available to deal with unusual situations which may arise.

The information which is obtained will be treated as privileged and confidential and will not be released or revealed to any person without my express written consent. The information obtained however, may be used for a statistical or scientific purpose with my rights of privacy retained.

I have been fully informed about this test, how it may aid in my diagnosis and treatment and its possible consequences. I acknowledge that no guarantee have been made to me as to the result and hereby voluntarily consent to the test being administered.

I have read the foregoing and I understand it. All questions which I have asked have been answered to my satisfaction.

Signature of Patient or Representative Date: 8-26-14

Witness Date: 8-26-14

Physician Supervising the Test Date: _____

Physician ID: _____

Cardiology Orders and Results (08/26/14 - 08/26/14)

NM MYOCARD PERF IMAG SPECT MULT [126719605]

Completed

Ordering user: Donnell, Hugh G, MD 08/25/14 0916 Authorized by: Donnell, Hugh G, MD
Ordering mode: Standard
Electronically signed by: Donnell, Hugh G, MD 08/25/14 0916
Lab status: Final result Instance released by: Som, Dba 8/26/2014 8:57 AM
Diagnoses: Exertional chest pain [786.50]
Final result, Resulted on: 08/27/14 1352 (Normal)

Order Status: Completed Resulted by: Christopher Simpson, MD
Performed: 08/26/14 0913 - 08/26/14 1227
Narrative: DATE: 8/26/2014

INDICATION: Exertional chest pain in a 37-year-old patient with diabetes.
Preoperative assessment prior to surgery.

STRESS TECHNIQUE: The patient received our intravenous Lexiscan pharmacologic protocol. Heart rate and blood pressure response was appropriate. The patient complained of no symptoms. Resting EKG demonstrates normal sinus rhythm, no diagnostic changes, stress EKG demonstrates no diagnostic changes of ischemia or dysrhythmia.

IMAGING FINDINGS:

Comparison of rest / stress images reveal normal stress myocardial perfusion imaging without evidence of ischemia or prior infarct. Gated images reveal normal left ventricular systolic wall motion, ejection fraction 79%. TID ratio is inaccurate due to artifact involving the resting images.

Impression:

1. Adequate pharmacologic stress, no reproduction of angina.
2. Normal EKG response to pharmacologic stress.
3. Low-risk myocardial perfusion imaging for obvious inducible ischemia or prior infarct.
4. Normal left ventricular systolic wall motion, ejection fraction 79%.
