

THE PBX CONUNDRUM

What phone system is more beneficial, Hosted PBX or On-Premise PBX?

THE DECISION:

Is your business trying to decide between enjoying the value of a Hosted Voice-Over-IP solution versus running your own On-Premise solution? There are many factors to help you to make this decision.

LET'S WEIGH THEM UP:

Costly; difficult to scale, hard to manage, need for skilled staff. Capital depreciation, obsolete equipment and technology.

ON-PREMISE

Manage from anywhere, at any time. One monthly bill; updated technology. Increased security. Pay as you grow.

HOSTED PBX

Hosted PBX, a cloud-based enterprise solution for companies of any size, eradicates the headache of an On-Premise PBX system. It also enables Unified Communications within your business. It is fast becoming the choice telephony solution for businesses of all sizes.

According to Infonetics Research, Hosted PBX will be a **\$12 billion market** with **62.6 million seats** by 2018.¹

Markets and Markets forecasts the Unified Communications market to grow from **\$15.12 Billion** in 2015 to **\$24.88 Billion** in 2020.²

That's a whole host of companies and employees benefiting from the exciting changes that Hosted PBX and Unified Communications can bring.

HOSTED PBX DELIVERS

Enterprise-Level Quality and Benefits

LOW SET-UP COSTS

CONSTANTLY CONNECTED

IMPROVED PRODUCTIVITY

RAPID SCALABILITY

FOCUS ON CORE BUSINESS

BUSINESS CONTINUITY

VERDICT:

Winner: Hosted PBX system

Choosing an On-Premise PBX solution could be a decision that weighs down your organization. If you are a business who wants to benefit from the same high quality phone system that a large enterprise would adopt then a Hosted PBX solution is the way forward. The benefits of a Hosted PBX far outweigh the On-Premise equivalent and give small, medium and large business the opportunity to level the playing field with larger enterprises.
