

## MEMORY HILOGGER LR8400, LR8401, LR8402

Data Loggers

## Portable Data Logger with 30 Standard Channels Expandible to 60 Channels

Only the size of an A4 sheet of paper, the HIOKI LR8400-20 Series is the realization of our goal to build a logger that provides the existing functionality of a multi-channel data logger in a portable format. The new model comes with 30 channel capability as standard, to which another 30 channels can be added. All input channels for measuring temperature (with thermocouples), or voltage are isolated for safety, culminating in a powerful multi-measurement system that also offers pulse and logic inputs. Long-term logging is coupled with the capability to protect data against unexpected power outages and other problems for stable recordings over an entire year (see note).

Note: Continuous recordings lasting longer than 1 year are also possible.

# In fuel cell, electric automobile and other development

**Multi-channel measurements** 

In the development of fuel cells, multiple power-generating cells

are connected to form a stack. Independent measurements of each cell require multi-channel measurements of DC voltage, DC

The LR8400-20 Series comes with 30 channels as standard, which

- Environmental measurements to prevent global warming
- Development of fuel cell materials, energy field
- Development of automobiles, testing of automobile parts
- Maintenance and inspection of equipment
- Monitoring plants
- Testing of electrical products
- Impedance testing of electronic parts

### High withstand voltage

current, temperature and other parameters.

can be expanded to 60 channels.

The HiLOGGER measures not only fuel cells, but also batteries for UPS (uninterruptible power supplies) devices used in buildings as well as batteries consisting of cells and packaging connected in stacks that require multi-point measurements.

In such measurements, high voltage for the whole stack is applied between channel-to-channel and channel-to-ground. Only a measuring instrument with isolated inputs and high-capacity withstand voltage characteristics can endure this.

Note: Isolation between channels is possible through the use of semi-conductor relays. Voltage exceeding the product specifications, such as that originating from lightning surges or other sources, should never be applied between each channel; otherwise the relays will short and the recorder will be damaged.

### High-speed sampling

In the development of automobiles such as electric vehicles (EV) and plug-in hybrid vehicles (PHV) that use motors for propulsion, abrupt changes in load need to be measured.

This makes the multi-channel, high-speed 10 ms sampling capability of the LR8400-20 Series an indispensable feature.

- Measure and record:
- Temperature & humidity
- A variety of transducer outputs (DC voltage)

Resistance values

### Voltage measurement (DC only)

- 30 input channels
- Note: The LR8400-20, LR8401-20 and LR8402-20 models differ in the combination of input functions and terminals.
- All input channels are isolated Note: Maximum rated voltage above ground between the HiLOGGER and analog inputs is 300 V AC/DC.
- Note: Maximum channel-tochannel voltage is a high voltage of 300 V DC. (Maximum voltage for models with M3 screw input terminals is 250 V DC.)

### Temperature & humidity measurement

- Temperature measurements of thermocouples on 30 channels
- M3 screw terminal inputs enable secure connection of even thin thermocouples
- Special sensor permits humidity measurements on 30 channels (onlined 72000)
- 30 channels (optional Z2000) Note: The sensor power supply is the M3 mm dia. screw terminal block on the left side. Note: Both universal input terminals and M3 mm dia. input terminals enable humidity measurements.

### Temperature & resistance measurement

- Universal inputs support temperature measurements using Platinum resistance temperature sensor (Pt100/ JPt100), or resistance measurements (four wires)
- Note: These cannot be measured using the M3 screw input terminals units. Note: Supports resistance recording to enable assessment of
- Note: Supports resistance recording to enable assessment of changes in resistance in the device under test. 4-terminal method, measurement resolution  $0.5 \text{ m}\Omega$  -, testing current 1 mA

**4-20m** To record 4 - 20mA instrumentation signals, attach a commercially available  $250\Omega$  shunt resistance to the input terminals (between + and -) to convert the signals to 1 - 5 V. Then use the 1-5V or the 10V f.s. input range in the HiLOGGER.

A compact A4 size enhances mobility A compact A4 size footprint makes it ideal for use in virtually any environment.

**Helps also in collecting automotive data** Ideal for testing and collecting data on the vibration characteristics of automotive parts

### **Pulse totalization measurement**

- 8 channel inputs (pulse and digital input selectable for each channel)
- For measuring energy consumption and cumulative flow
- The input signal shares common ground with the HiLOGGER
   Note: M3 screw input terminals provide direct connection

### **Pulse rotations measurement**

- 8 channel inputs (pulse and digital input selectable for each channel)
- For measuring rotational irregularities of motors and drills

**Pulse totalization** 

revolution

 The input signal shares common ground with the HiLOGGER
 Note: M3 screw input terminals provide simple connection

### Logical 1-0 measurement

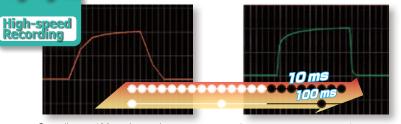

- 8 channel inputs (digital and pulse input selectable for each channel)
- 1 or 0 is recorded for each
- recording interval • The input signal shares common ground with the HiLOGGER Note: M3 screw input terminals

provide simple connection

# Accurately capture any phenomena you want to measure

### Highlights

Sampling at 100 ms intervals cannot capture abrupt load changes

Sampling the same waveform at ten times the speed, at 10 ms intervals, accurately captures the changes.

### ■ 10 ms high-speed sampling

The development of hybrid and electric automobiles requires instruments that can measure abrupt load changes. Channels 1 to 15 provide 10-ms sampling and channels 16 to 30 provide 20-ms sampling. This channels allow you to track waveforms not possible with earlier models.

Note: Measurements on channels 31 to 60 provide 50-ms sampling.

Without electric noise reduction, you will obtain a waveform like the one above in temperature measurements of an electromagnetic cooker

A digital filter in the HiLOGGER eliminates high-frequency noise to enable accurate temperature waveforms **Enhanced noise suppression** A digital oversampling filter function reduces inverter switching noise and 50/60 Hz hum noise, a concern in earlier models, during recording.

Note: The noise reduction effect improves with longer recording intervals (i.e., at slower sampling speeds).

### ■ 5.7 inch TFT LCD display is easy to view even at an angle The LCD has a wider visual angle and is larger (5.7 inches, 640 × 480 dots)

than the STN LCD in our previous model (8420-51s) to facilitate observation of waveforms on multiple channels.

# Store data securely for more than 1 year

### Compatible with USB memory devices

For even greater convenience, the HiLOGGER now provides support for USB memory devices. Measurements can now immediately be written to a USB memory device in real-time. USB memory devices are also a handy means to transfer data to a PC.

Note: Although USB memory devices enable real-time saving of data, for more reliable data protection we recommend use of HIOKI CF cards, which are guaranteed to work with the instrument, for real-time saving of data.

Saving data to CompactFlash (CF) card Use only HIOKI CF cards, which are manufactured to strict industrial standards, for long-term storage of important data.

Note: Operation of non-HIOKI CF cards is not guaranteed

### Recording Capacity

Note: Use only HIOKI CF cards that are guaranteed to operate with the HiLOGGER for continuous long-term recording.

	Recording of 15 analog char		rement alarm autout ar wa	voform proposing data
Recording intervals	Internal memory (16 MB)	Model 9728 (512 MB)	Model 9729 (1 GB)	Model 9830 (2 GB)

30s	97d 02h 10m	"★"	"★"	"★"
1min	194d 04h 20m	"★"	"★"	"★"
2min	388d 08h 40m	"★"	"★"	"★"
5min to 1hour	"★"	"★"	"★"	"★"

Maximum recording time is inversely proportional to number of recording channels.

· Because the actual capacity of a CF card is less than that indicated, and because the header portion of waveform files is not included in capacity calculations, expect actual maximum times to be about 90% of those in the table. "★" exceeds 1 year.

### Cards can be replaced during real-time recording

This function has been provided to enable removal of cards during recording to allow the user to analyze the data recorded so far.

This makes it possible to replace USB memory devices and CF cards during real-time recording without having to stop measurements.

Note: During high-speed recording, be sure to insert the new storage media within 2 minutes of removing a card.

# A host of useful functions and features

### Up to two additional 15 channel input units can be added

The need for more measurement channels can be met even after purchasing the instrument. The instrument comes with 30 channels as standard, but another two 15 channel input units can be added to expand the total number of channels to 60.

*Note: The units provided with the unit as standard cannot be removed.* 

The number of input channels can be expanded !! Max. 60 Ch

■ Input setting screens with waveform monitoring The HiLOGGER adopts the setting screens that earned its sister model (8430-20) a reputation for user-friendliness. Range settings, warnings, triggers, waveform processing and other measurement input settings can be taken in at a glance.

### Function highlights Weathers power outages

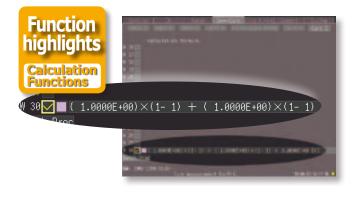

Function

nahlahts

USB / LAN

USB

■ Trickle charging the internal battery An internal battery (optional accessory) is charged when the AC adapter is connected. Since the internal battery will automatically take over in the event of a sudden power outage, it permits uninterruptible operation.

### Alarm output

The HiLOGGER outputs a signal when alarm criteria are satisfied and also sounds a buzzer. Four systems are provided as standard and separate criteria can be set for each input source enabling OR and AND criteria between channels.

Note: Open-collector output (5 V voltage output and relay drive capacity 5 to 30 V, 200 mA)

### Protection of files being stored on external storage media

An internal high-capacity capacitor will provide enough power to store any data at risk on a CF card or USB memory device should a sudden power outage occur during long-term storage. This reduces the risk of data loss and corruption of the file system. Measurements will resume as soon as the power returns.

### Real-time processing functions

The HiLOGGER comes with **[four arithmetic operation]** functions for processing between channels. Data processed in real-time can be displayed in graph form. In addition, processing results for 30 channels are stored in internal memory and can be handled as data for independent input channels.

**Records average values every 30 minutes** The HiLOGGER contains a **[time-span processing]** function. The instrument will save processing data as text data for a preset time period in real-time.

**Simultaneous recording to storage media and PC** Measurement data can be simultaneously saved to external

# Bundled user-friendly software for PC analysis

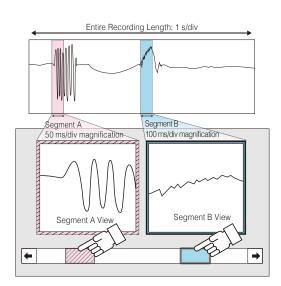

Control of measurements from a PC screen

Connect the PC to the HiLOGGER using USB or via LAN\* (see note). Use the supplied Logger Utility software to record data on a PC in real-time. Scroll backwards through the displayed trend graph window to view past waveforms even while recording. Up to five HiLOGGERs can be connected to one PC.

### Analyze after measuring

Our new "dual-knob function" greatly simplifies data analysis. Two separate waveform windows are provided, with the displayed waveforms showing different time-axis scales (time bases). This capability substantially simplifies long-term data analysis.

Remote control through HTTP server function\* Data acquisition via FTP\* FTP allows the PC to acquire files stored Without the need to install additional software, you can use an ordinary web browser on your PC to set up the on HiLOGGER storage devices or HiLOGGER, acquire data and monitor data on the screen. measurement data in internal memory. USB memory	Series A receptacle
Communication	
LAN interface (ver. 1.20 or later)	IEEE 802.3 Ethernet 100BASE-TX, DHCP, DNS capable • Data acquisition, condition settings used with the Logger Utility software (supplied as standard) • Use the communication command to set and measure • Data download via FTP server function (stored in the CF card or the USB memory)
	Automatically transmit data via FTP client function     Remote control via HTTP server function     Send mail function via E-mail system     USB 2.0 High-speed capable, series mini-B receptacle     Data acquisition, condition settings used with the Logger Utility
USB communication interface	software (supplied as standard) • Configure the unit and measure using communication commands • Transfer data from the CF card to a PC via USB drive mode (data transfer not possible from USB memory sticks)
Display section	
Display device	5.7 inch TFT color liquid crystal display (640 × 480 pixel), horizontal 15 division, vertical 10 division, selectable between English and Japanese displays, Back light saver available
LCD Brightness	Selectable from 100, 70, 40, or 25 %
Power supplies	
AC Power	Using the AC ADAPTER 9418-15 (supplied as standard, 100 to 240 VAC, 50/60 Hz), Power consumption: 7 VA (with battery pack removed and maximum brightness)
DC Power	Using the BATTERY PACK Z1000 (optional accessory, AC adapter has priority when used in combination with battery pack) Continuous operation time: 5 hours (at 23 °C, LCD brightness 25 %) Fast recharging time: 3 hours (using the AC adapter and main unit to recharge the battery, at 23 °C, reference value)
External	10 to 28 VDC (Rechargable voltage 12 to 16 VDC, Please contact your HIOKI distributor for connection cord) Maximum rated power: 24 VA (at 16 VDC external power supply, battery charge, LCD brightness 100 %)
Trigger functior	
Trigger mode, timing	Modes : Single / Repeat, Timing : Start / Stop / Start & Stop, Logical sum (OR) and product (AND) of each trigger source, Selectable for each channel
Analog signal source	Configure each individual channel for 30 channels or up to 60 channels depending on number of additional terminal modules installed. [Level trigger] Triggers when rising or falling through preset level [Window] Triggers when entering or exiting range defined by preset upper and lower limit values
Pulse signal source	8 channels of pulse totalizer inputs [Level trigger] Triggers when rising or falling through preset level [Window] Triggers when entering or exiting range defined by preset upper and lower limit values
Digital signal source	8 channels of digital signal inputs [Logic pattern trigger] agreement (or disagreement) in the specified [1/0/×] pattern
Timer trigger	Set up for year/ month/ day/ hour/ minute/ second
Trigger output	Open collector (active low, with 5 V output, at least 10 ms pulse width), M3 mm screw terminal
Alarm output	
Number of channels Alarm source	4 channels, non-isolated (common ground with chassis) 60 channels of analog input, 8 channels of pulse totalizer inputs or digital inputs. Thermocoural burn out detection
Alarm type	digital inputs, Thermocouple burn-out detection Level, Window, Logic pattern, Output latch/ no latch, Cancel alarm while measuring
Alarm sound	Buzzer, ON/OFF possible
Alarm output	Open collector (active low, with 5 V output), M3 mm screw terminal,
	Output refreshed at every recording interval 200 mA at 5 V to 30 VDC
Output sink current

### Optional Product Specifications

Digital filter

VOLTAGE/TEMP UNIT LR8500 (Accuracy guaranteed for 1 year, Post-adjustment accuracy guaranteed for 1 year)		
Number of input channels	15 channels (input type selectable from voltage, thermocouple, humidity, for each channel), M3 screw terminals (2 terminals per channel) Note: Isolated from each channel to chassis	
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassies Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassies	
Input conditions	Input resistance: $1 M\Omega$ (at voltage/ thermocouple measurement) Max. rating: $\pm 100 V DC$ (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	250 V DC (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Measurement accuracy	Refer to MEMORY HiLOGGER main unit specifications	
Dimensions & Mass	Approx. 128 mm (5.04 in) W × 52.8 mm (2.08 in) H × 64.5 mm (2.54 in) D, 380 g (13.4 oz)	

UNIVERSAL UNIT L	.R8501 (Accuracy guaranteed for 1 year, Post-adjustment accuracy guaranteed for 1 year)
Number of input channels	15 channels (input type selectable from voltage, thermocouple, Pt 100/ JPt 100, humidity, resistance, for each channel), Push-button type terminals (4 terminals per channel) Note: Isolated from each channel to chassis
	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis
Measurement	Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/ 4-wired, testing current 1 mA) Note: Not isolated between channels
parameters	Resistance (4-wired, testing current 1 mA) Note: Not isolated between channels Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis
Input conditions	Input resistance: $1 M\Omega$ (at voltage/ thermocouple measurement), $2 M\Omega$ (at platinum resistance temperature sensor, or resistance measurement) Max. rating: $\pm 100 V DC$ (max. voltage between input terminals without damage)
Max. rated voltage between isolated input channels	300 V DC (max. voltage between input channel terminals)
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)
Measurement accuracy	Refer to MEMORY HiLOGGER main unit specifications
Dimensions & Mass	Approx. 128 mm (5.04 in) W × 52.8 mm (2.08 in) H × 64.5 mm (2.54 in) D, 300 g (10.6 oz)

Model Line-up		
Items	Specifications	Model LR8400-20 (with built-in VOLTAGE/TEMP UNIT × 2)
Analog input	Built-in 30 channels Note: Isolated from each channel to chassis [UNIT-1, UNIT-2] M3 screw terminals × 30 channels (2 terminals per channel) Expandable by adding 30 more channels for a total of 60 input channels (optional input unit, Model LR8500 or LR8501, up to 2 units)	Caution: Built-in M3 screw terminal units cannot be removed or replaced M3 screw M3 screw terminals x 15 M3 screw terminals x 15
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis	
Input resistance	$1 \text{ M}\Omega$ (at voltage/ thermocouple measurement)	the survey of th
Max. allowable input	±100 V DC (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	250 V DC (max. voltage between input channel terminals)	HEORI (C. S. C. S.
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Items	Specifications	Model LR8401-20 (with built-in UNIVERSAL UNIT × 2)
Analog input	Built-in 30 channels Note: Isolated from each channel to chassis [UNIT-1, UNIT-2] Push-button type terminals × 30 channels (4 terminals per channel)	Caution: Built-in push-button terminal units cannot be removed or replaced
· · · · · · · · · · · · · · · · · · ·	Expandable by adding 30 more channels for a total of 60 input channels (optional input unit, Model LR8500 or LR8501, up to 2 units)	Push-button type Push-button type
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/ 4-wired, testing current 1 mA) Note: Not isolated between channels Resistance (4-wired, testing current 1 mA) Note: Not isolated between channels Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis	terminals x 15 terminals x 15
Input resistance	1 MΩ (at voltage/ thermocouple measurement) 2 MΩ (at resistance temperature sensor, or resistance measurement)	
Max. allowable input	±100 V DC (max. voltage between input terminals without damage)	HIDKI
Max. rated voltage between isolated input channels	300 V DC (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Items	Specifications	Model LR8402-20 (with built-in UNIVERSAL UNIT x 1, VOLTAGE/TEMP UNIT x 1)
Analog input	Built-in 30 channels Note: Isolated from each channel to chassis [UNIT-1] Push-button type terminals × 15 channels (4 terminals per channel) [UNIT-2] M3 screw terminals × 15 channels (2 terminals per channel) Expandable by adding 30 more channels for a total of 60 input channels	<b>Caution:</b> Built-in push-button terminal unit and M3 screw terminal unit cannot be removed or replaced
Measurement parameters	(optional input unit, Model LR8500 or LR8501, up to 2 units) Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis [UNIT-1 side only] Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/ 4-wired) Note: Not isolated between channels Resistance (4-wired) Note: Not isolated between channels	Push-button type M3 screw terminals x 15 M3 screw terminals x 15
Input resistance	$1 M\Omega$ (at voltage/ thermocouple measurement) $2 M\Omega$ (at platinum resistance temperature sensor, or resistance measurement)	
Max. allowable input	±100 V DC (max. voltage between input terminals without damage)	PHONE PHONE
Max. rated voltage between isolated input channels	250 V DC at M3 screw terminals, 300 V DC at push-button type terminals (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	

### Bundled software specifications

Logger Utility (bundled application software)		
Operating environment	OS: Windows 8 (32/64 bit)/ 7 (32/64 bit)/ Vista/ XP (SP2 or later) (This software is compatible only to the Wireless Logging Station LR8410-20, Memory HiLogger LR8400-20series, LR8431- 20, 8423, and 8430-20)	
Real-time data acquisition	Measurements on multiple loggers connected by LAN or USB can be controlled to sequentially acquire, display and save waveform data (for recording up to 10 million samples) Number of controllable instruments: up to 5 units (This software is compatible only with the LR8410-20, LR8400 -20series, LR8431-20, 8423, and 8430-20) Display: Waveforms (time-axis divided display possible), numerical values (logging), and alarm status can be displayed at the same time Numerical value display: Can be monitored in a separate window Scroll: Waveform scroll while measuring Data saving destination: Real-time data transfer to Excel, or Real- time data acquisition file (LUW format) Event marks: Can be set while measuring	
Data acquisition settings	Data acquisition settings for the logger or logging station Saving: The setting for multiple loggers or logging stations can be saved together in one file (LUS format); Instrument configuration settings can be sent and received	
Waveform display	Processed data file: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format) Display format: Simultaneously display waveform and numerical value, (time-axis divided display possible) Maximum number of channels: 675 channerls (measurement data) + 60 channels (waveform processing data) Others: Display each channel's waveform on 10 sheets, scroll, record event mark, cursor, screen hard copy, numerical value display	

Data conversion	Target data: Real-time data acquisition file (LUW format), record to internal memory data (MEM format) Converted sections: All data, designation section Format: CSV format (separate by comma, space, tab), transfer to Excel spreadsheet, arbitrary data thinning
Waveform processing	Processing items: Four arithmetic operations Number of processing channels: 60 channerls
Parameter calculations	Target data: Real-time data acquisition file (LUW format), record to internal memory data (MEM format), data acquired in real time, waveform processing data Calculation items: Average, peak, maximum values, time to maximum values, minimum values, time to minimum values, ON time, OFF time, count the number of ON time and OFF time, standard deviation, integration, area values, totalization
Search functions	Target data: Real-time data acquisition file (LUW format), record to internal memory data (MEM format) Search mode: Event mark, time and date, maximum position, minimum position, maximum pole, minimum pole, alarm position, level, window, amount of change
Print functions	Supported printer: Printer compatible with the OS Target data: Real-time data acquisition file (LUW format), record to internal memory data (MEM format) Print format: Waveform image, report format, list print (channel settings, event, cursor value) Print area: The entire area, area between cursors A and B Print preview: Supported

### Main units and Options in Detail

### MEMORY HILOGGER

Order Code: LR8400-20 (built-in units are equivalent to the Votage/temp unit LR8500 × 2) Caution: Built-in units cannot be removed or changed

### MEMORY HILOGGER

 Order Code:
 LR8401-20
 (built-in units are equivalent to the Universal unit LR8501 × 2)

 Caution:
 Built-in units cannot be removed or changed

 Order Code:
 LR8402-20
 (built-in units are equivalent to the LR8501 × 1, and LR8500 × 1)

 Caution:
 Built-in units cannot be removed or changed

Measurement and input options

PC Card Precautio

se only PC Cards sold by HIOKI

Compatibility and performance are not guaranteed for PC cards made by other manufacturers. You

may be unable to read from or save data to such cards.

VOLTAGE/TEMP UNIT LR8500 2 terminals M-3 mm screw type, 15 channels Voltage, Temperature with thermocouple, or Humidity measurement

storage (CF card)

Supplied with PC Card adapter PC CARD 2G 9830 (2 GB capacity) PC CARD 1G 9729 (1 GB capacity)

PC CARD 512M 9728

For wall hanging and slanted mounting

(512 MB capacity)

UNIVERSAL UNIT LR8501 4 terminals push-button type, 15 channels Voltage, Temperature with thermocouple, Platinum Resistance temperature sensor, Humidity, or Resistance measurement

HUMIDITY SENSOR Z2000 3 m (9.84 ft) length

Charges while installed in the HiLOGGER

BATTERY PACK Z1000

Ni-MH. Charges while install

AC ADAPTER 9418-15 Supplied as standard, 100 to 240 V AC
