

Integrating Apps and Options To Settings

Hai Guys this is the tutorial for Adding Apps and Options To Settings. Here iam integrating mobile uncle tool to settings.

****Before start Take a Backup for Safety, nandroid backup****

Pull out Framework-res.apk and Settings from your rom (system->privet-apps->Settings, use root explorer.apk)

Decompile Settings.apk and Mobile Uncletool.apk(download it from store and Install it in your phone).

1. Open Decompiled settings folder open 'res->xml->dashboard_categories.xml' add the following lines.

```
<dashboard-category android:id="@id/wireless_section" android:title="@string/uncle_title">
  <dashboard-tile android:icon="@drawable/uncle_icon" android:title="@string/uncle_name">
    <intent android:targetPackage="com.mobileuncle.toolbox"
      android:action="android.intent.action.MAIN"
      android:targetClass="com.mobileuncle.toolbox.SplashActivity" />
  </dashboard-tile>
</dashboard-category>
```

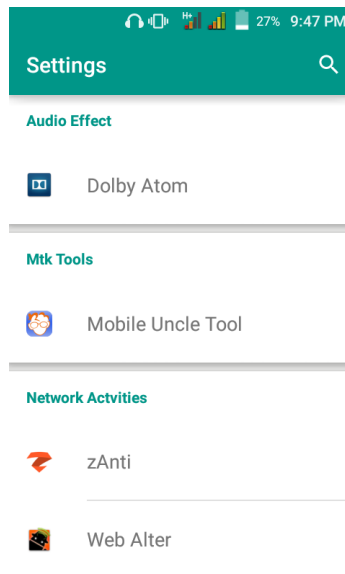

2. Open res->values->string.xml then add following line

```
<string name="uncle_title">Mtk Tools</string>
<string name="uncle_name">Mobile Uncle Tool</string>
```

3. Open res-> drawable folder put .png format icon and name it as uncle_icon

4. Compile and sign the Settings and put it back in System->privet-apps->Settings .

6.reboot

Remember 1

*You can add any other app just putting android:targetPackag , android:targetClass , android:action which can obtain from AndroidManifest.xml file of that app .

*android: targetClass denotes activity eg: SplashActivity in uncle tool(check AndroidManifest.xml of uncle tool).

Remember 2

For hiding app from launcher remove the line form **AndroidManifest.xml**

```
< intent-filter>  
  
<category android:name="android.intent.category.LAUNCHER"/>  
  
< /intent-filter>
```

THANKSS
