CALICOS

Calico
Kitten (My Own)

Calico is not a breed but is just a variation of fur that is tri-colored. The fur is predominantly white with patches of orange, brown, and black. Although most calico cats are female it is possible for male calico cats to exist. Calico cats are often confused with cats with tortoise shell fur pattern. The difference between Tortoise shell and calico cats are that calico cats have distinct patches of color in their fur while tortoise shell cat's fur seems to blend together and often has no white.

TORTOISE SHELL

Tortoise Shell Cat
(My Own)

Tortoise shell cats, like calico cats, are not a certain breed, but just have a different variation of fur. Tortoise shell colors can include different shades of black and brown, as with calico cats, most tortoise shell cats are female but can be male.

SIBERIAN

Google Image

Siberian cats originated in Russia and of course like other cats, were prized for their hunting ability. Siberian cats can come in all variations of colors mostly with white. Siberian cats are also known to not produce a certain chemical which allows some people that would normally be allergic to cats, to be able to own them.

CHARTREUX

Chartreux cat
(my own)

Chartreux cats originated in France and are known for their grey coat and orange eyes. Chartreux cats have short but thick fur and also have very low shedding, Chartreux cats have a strong build, long tail, and can be silly and do like lots of attention.

TABBY

Orange Tabby Cat
(my own)

The tabby fur gene is more dominant than any other fur gene so tabby cats are often very popular. Tabby cat markings can be stripes, spots, ticks and swirls. Tabbies can be found as brown tabbies, silver tabbies, ginger orange tabbies, grey tabbies, and more.

SIAMESE

Siamese Cat
(google image)

- Siamese cats are often seen with long muscular bodies with white/grey fur with a little brown and black in it, they also often have blue eyes. Siamese cats are known to be very social cats and will follow you and talk a lot of the time, they will be on your lap and sleeping with you whenever. Siamese cats do not like to be left alone for long periods of time and demand lots of attention.
