

## **PSY 350 Week 3 DQ 1 Sensory Systems**

**Check this A+ tutorial guideline at**

**<http://www.assignmentcloud.com/psy-350-ash/psy-350-week-3-dq-1-sensory-systems>**

This week you were introduced to the sensory systems, which include the visual, auditory, olfactory, taste, and the body senses. Evolution would suggest that each sensory system is of significant importance to maintaining the human organism. For this discussion, imagine you are a professor giving a lecture on the evolutionary importance of the sensory systems. Prepare a summary of your argument. Identify which is the most important sensory system for human survival. Your discussion should also indicate which system is the least important from the perspective of the “survival of the fittest”.

Your initial post should be a minimum of 250 words and utilize at least one peer-reviewed source that was published within the last five years
