Introduction and Purpose

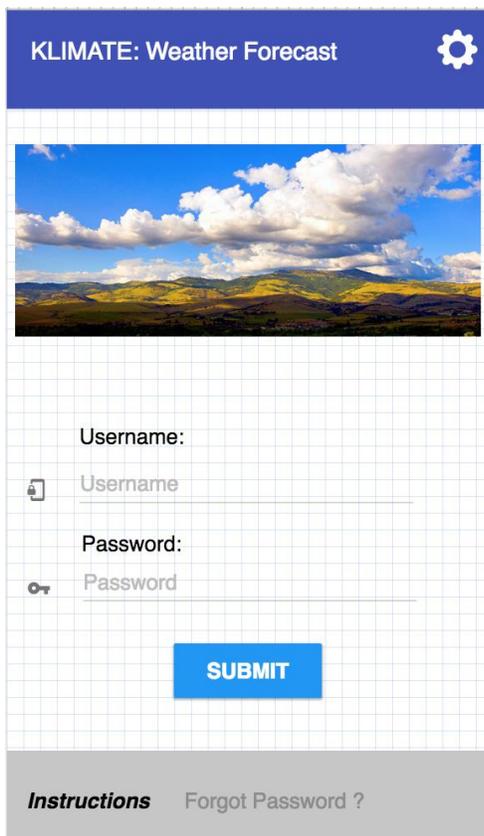

KLIMATE is a GPS based weather application that records and stores important weather information for up to 30 days. This guide aims to provide assistance in introducing the features of KLIMATE as well as giving a basic overview on the functionality and to provide aid in fixing known bugs that can commonly occur

Features

The features available to KLIMATE include a map to locate the desired location for weather recording more accurately and with ease, and these locations can be saved under nicknames (e.g. “Work”, “Home”) so revisiting the location is easier in the future. The weather information provided includes Maximum/Minimum temperatures, wind speed, and humidity (%) and temperatures can be changed between Celsius and Fahrenheit according to preference (Kelvin coming soon).

KLIMATE has been designed for use on PC, Android and iOS

App Overview

KLIMATE: Weather Forecast

SUBMIT

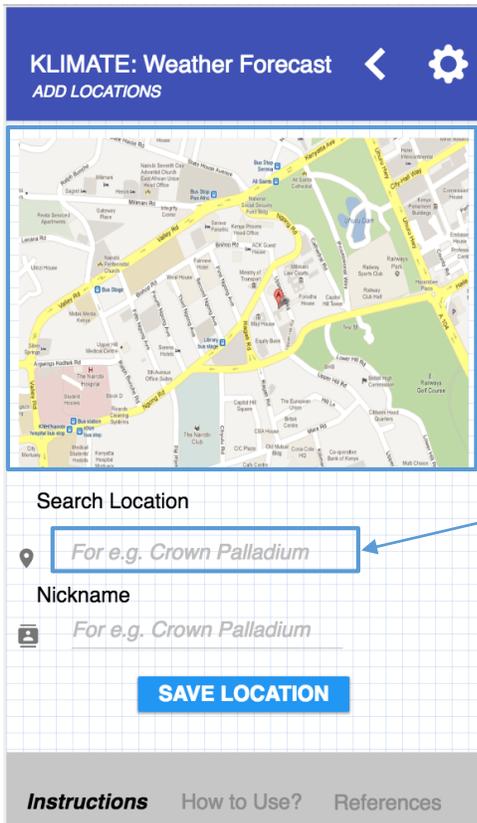

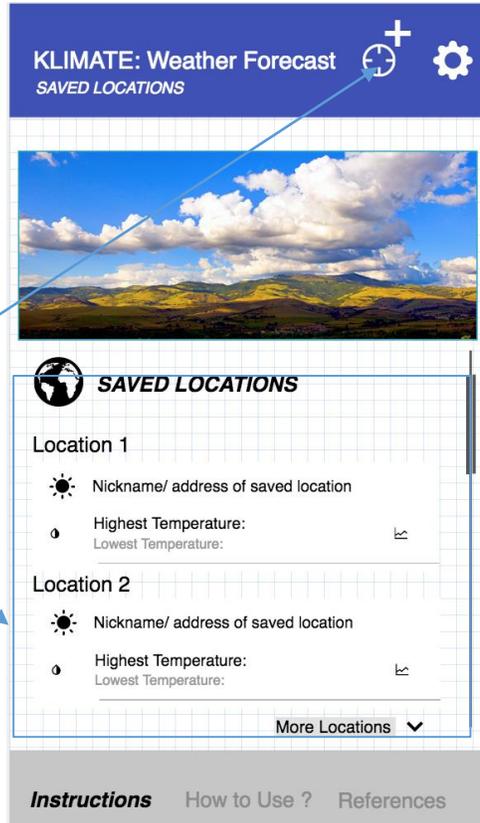

[Instructions](#) [Forgot Password ?](#)

Upon opening the app this page should appear. Enter the appropriate details to continue. If an account is required, registration can be found under “Forgot Password?”

This is the main page of the app.
From here, saved routes can be accessed (will be blank for first time use) or new locations can be added

Add New Location

To access a previously saved location just tap it on the menu

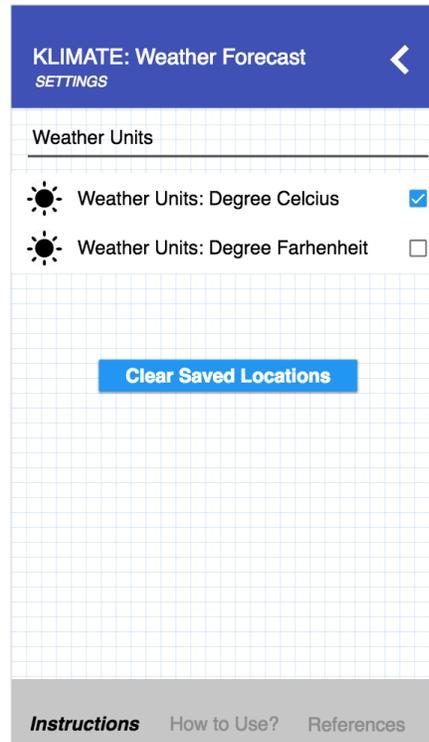

When adding a new location, there are two functions

1. Locate the location on the map manually

2. Search for landmarks, addresses or co-ordinates in the search bar

Note: If the "Nickname" field is left blank the app will set the co-ordinates as the name of the location by default

Tap appropriate setting to change units of degrees or delete all saved locations

Known Bugs or Limitation

Describe briefly any known bug or limitation with the app.

KLIMATE is an application still in development and as such as a few limitations and bugs that need to be highlighted and explained. Firstly, the app only has the capability to record present data and display past data. It cannot predict the future weather forecast. There are plans to add this functionality in a later update. The options for the settings are also very limited more will be added in the future.
