

This article will assist you with setting up Outlook 2011, using IMAP, for your Hosted Mailbox.

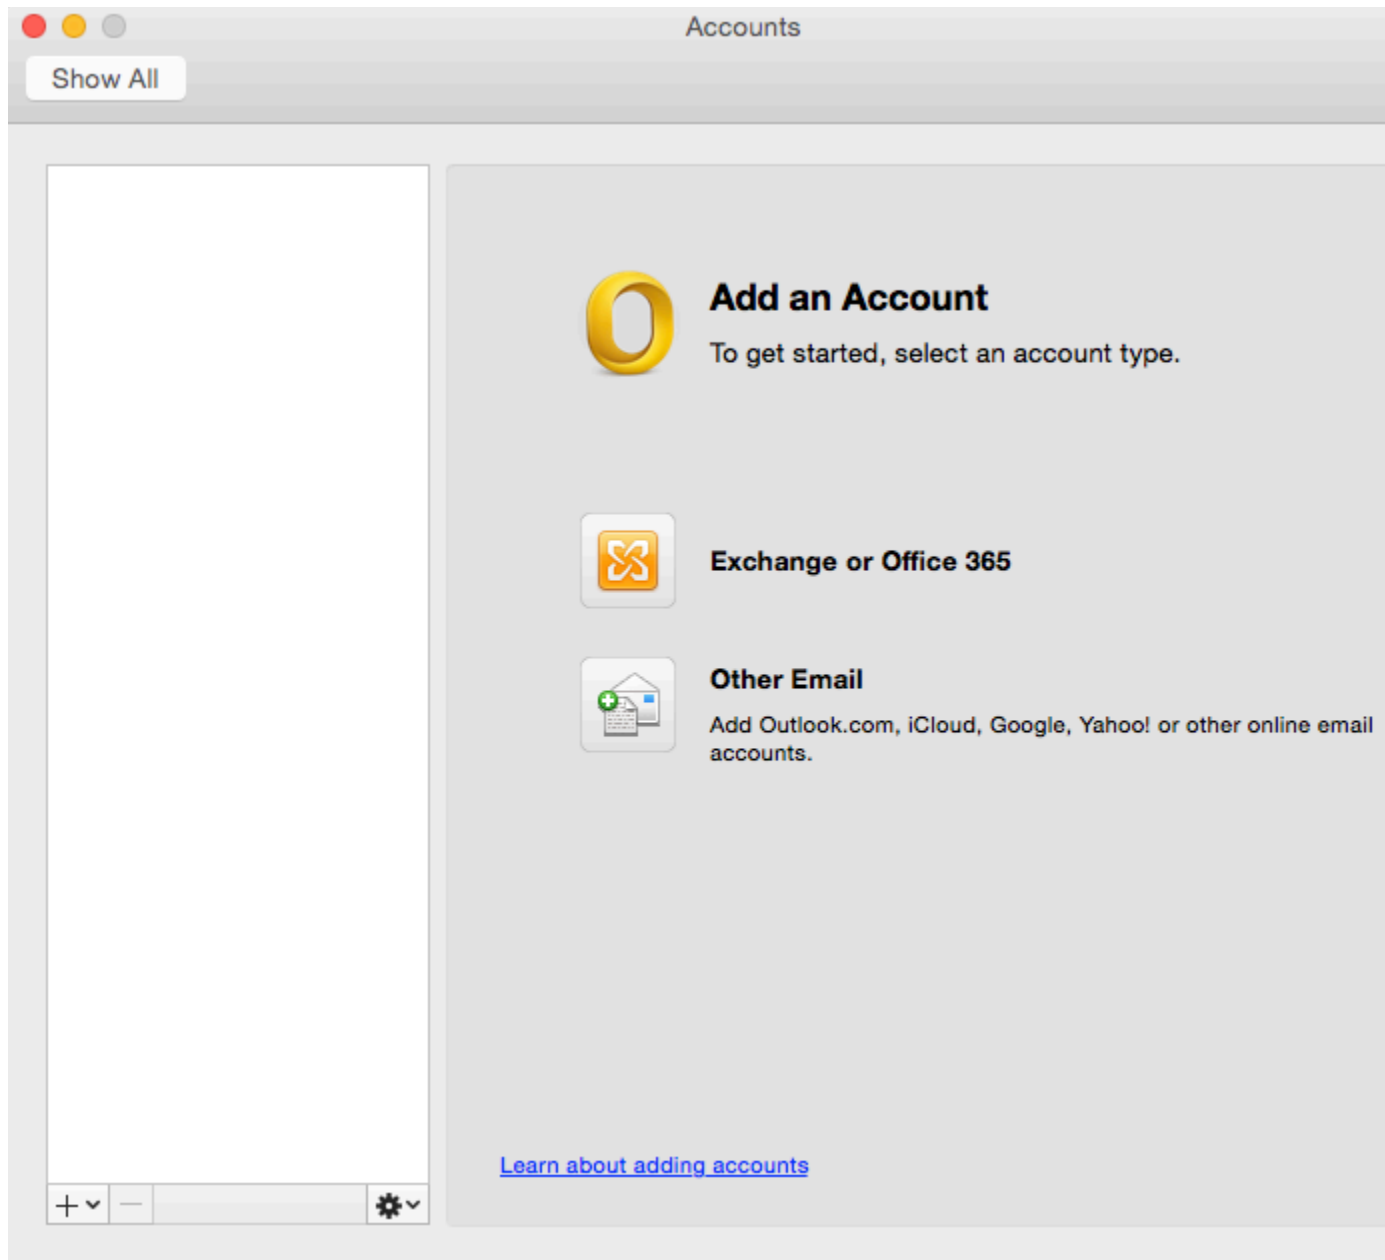

1. Launch Outlook, if it's not already open.
2. From the upper menu, select "**Outlook**" -> "**Preferences**".

3. In the next prompt, select "**Accounts**".

4. Within the Accounts dialog, select "**Other Email**".

5. The pop up dialog will require the following:
 - a. **"Email Address"**: example@unifyamerica.com
 - b. **"Password"**: Enter your mailbox password.
 - c. **"User name"**: example@unifyamerica.com
 - d. **"Type"**: IMAP
 - e. **"Incoming Server"**: secure.emailsrvr.com

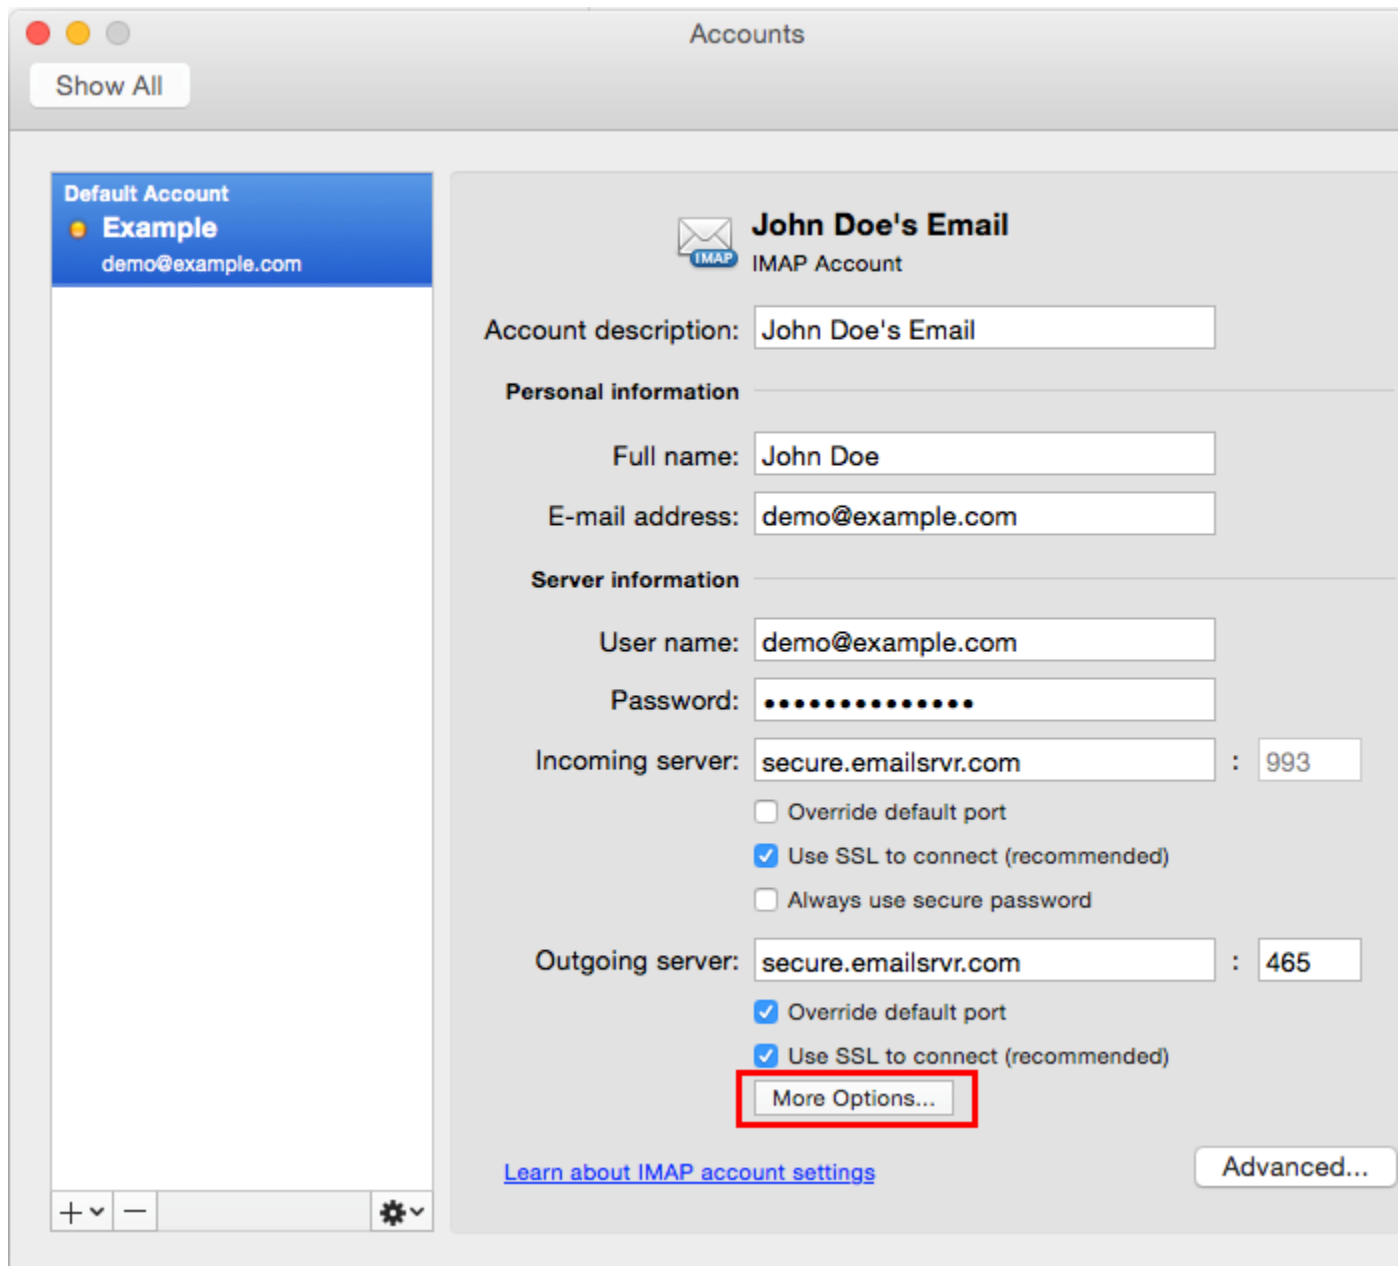

- f. **"Override default port"**: Checked
- g. **"Use SSL to connect (recommended)"**: Checked
- h. **"Incoming Server Port"**: 993
- i. **"Outgoing Server"**: secure.emailsrvr.com
- j. **"Override default port"**: Checked
- k. **"Use SSL to connect (recommended)"**: Checked
- l. **"Outgoing Server Port"**: 465

The screenshot shows the 'Accounts' window in macOS Mail. A dialog box titled 'Enter your account information.' is open. It contains the following fields and options:

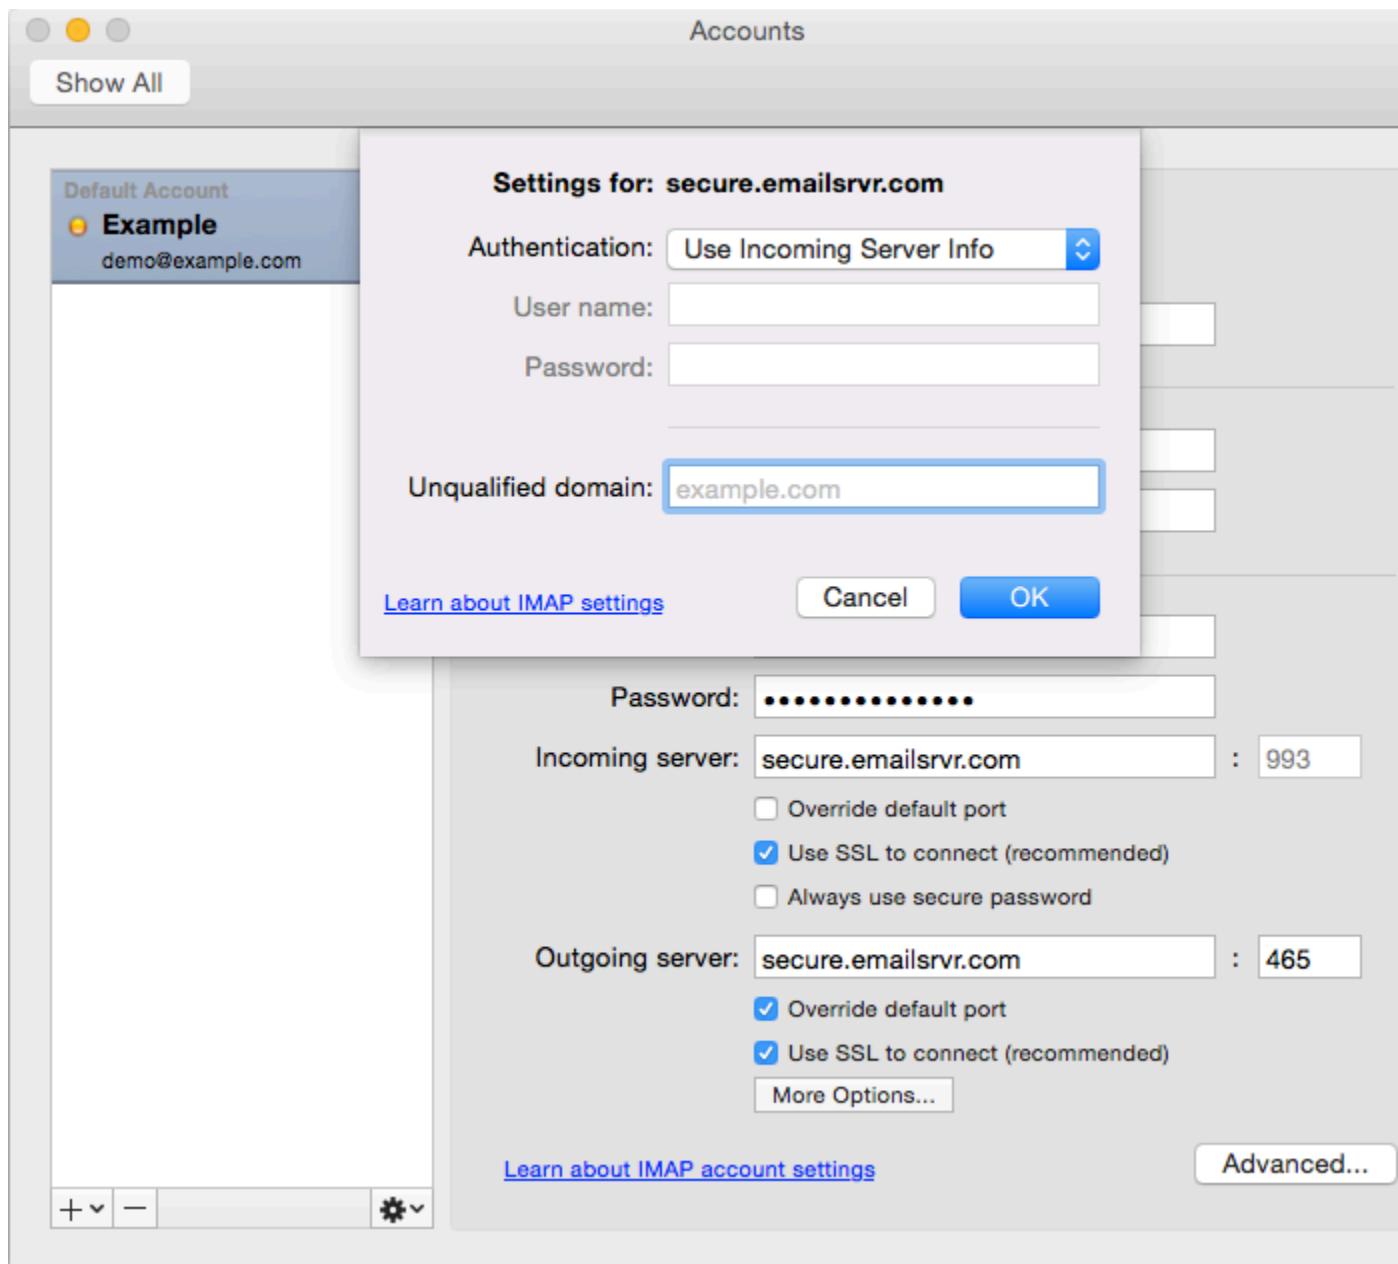

- E-mail address: demo@example.com
- Password: (masked with dots)
- ☐ Configure automatically
- User name: demo@example.com
- Type: IMAP (dropdown menu)
- Incoming server: secure.emailsrvr.com : 993
 - ☒ Override default port
 - ☒ Use SSL to connect (recommended)
- Outgoing server: secure.emailsrvr.com : 465
 - ☒ Override default port
 - ☒ Use SSL to connect (recommended)

At the bottom of the dialog box are 'Cancel' and 'Add Account' buttons. Below the dialog box, there is a link: [Learn about adding accounts](#).

6. Select "**Add Account**".
7. Within the Accounts dialog. Select "**More Options...**" under the "Outgoing server" section.

8. Within the dialog, ensure the following:
 - a. "**Authentication**": Use Incoming Server Info
 - b. "**Unqualified Domain**": Leave Blank

9. Click **"OK"**.
10. Close the Accounts window.
11. Click **"Send/Receive"**. Your email should begin syncing with the server.
