Skin diseases Types

An infection of the skin caused by bacteria or by fungus, virus on body it will affect the skin problems. Most common skin types are abscess, pimples, cellulite, warts, ringworm, impetigo, scabies.

Normal Skin:

- Tiny holes on the skin allow the sebum to come on the skin surface.
- Hair loss grow through these pores.
- During the teenage years much more sebum than when you were a child. This is due to hormonal changes.

Blackheads,whiteheads and small pimples:

Some pore become blocked. This is due to the skin at the pores becoming thicker.

Mostly dry skin people are highly facing this blackheads problems.

Larger spots and inflammation:

- A large number develop in the trapped sebum, the immune system may react and cause inflammation.
- The spots are red colored rash that appear on the body.

What makes Acne worse?

- In women, the hormonal changes around the monthly period may cause a flare-up of spots.
- Thick or greasy make-up may possibly make acne.
- Sweating heavily or humid conditions may make acne for ex,doing regular hot work in kitchens.
- Spots may develop under tight clothes. for ex,under headbands, tight collars.

Skin care for people with Acne

- Do wash more than normal wash.
- Cannot clean off blackheads.
- Use a soft washcloth.
- Do not scrub hard when washing.
- Use a mild soap and lukewarm.
