

Shearling coats for all seasons

A shearling coat has many advantages over other animal skin jackets. Offering multi-climate comfort is one of these advantages. Not to delve into their history, shearling coats' gained popularity during World War II. Aircrew bombers wore sheepskin coats to stay warm in unpressurized cabins in high altitudes. The crimp of sheep wool creates insulating air spaces, thus naturally retaining heat. Even during winter's worst, a shearling coat keeps you insulated and warm.

The following properties of sheepskin make shearling coats suitable for all seasons:

1. Water resistant: Naturally, sheepskin is water resistant. Wool fibers are usually arranged in layers. The wool fibers are sturdy and water-repellent. Outer fibers absorb moisture vapor without getting damp and protect the fiber's core from any moisture. With the humidity absorbed and water repelled, the shearling coat is a thermally regulating material. It only needs to be shaken after being worn in the rain or snow and smoothed with a brush.

2. Breathability: One might wrongly assume that the insulating properties of sheepskin would make it heavy during warm climate. Surprisingly, sheepskin is well known for its breathability and versatility. A shearling coat keeps the body temperature regulated when the environmental temperature fluctuates. During moderate weather, the coat keeps you cool and dry. It makes a perfect outfit for shoveling a snowy driveway or a light spring hike.

3. Moisture wicking ability: This is another property that makes sheepskin comfortable in warm weather. It absorbs moisture from your body in a way like wicking perspiration away. This property combined with being breathable ensures that your body remains warm and dry in varying climates. Processed wool is also light-weight and soft and this makes a shearling coat even more comfortable. It is a must-have three-season coat.

The durability of shearling coats is unparalleled. You can find a shearling coat that has been worn for more than 15 years and still looks great. The wool material can last for ages without losing their high quality and astounding appearance. Shearling coats are made to different sizes to cater for all-weather needs. Basically, longer coats are for cooler seasons while shorter ones are for warmer days.

These coats are made by the best tailors in Spain and South America. The superior technology used manifests itself in the appearance of shearling coats, not to mention their durability. The coats are a perfect way to experience the luxury of soft natural material that is exceptionally comfortable and suitable for a wide variety of weather conditions.

Combining the versatility, durability and style of shearling coats results to a “best purchase” for most people. A shearling coat provides more utility than most coats in the market. It’s favorably priced and offers great value for your money.

If you live in an area that experiences seasonal fluctuation of temperature, have your shearling coat ready for the seasons. Don’t wait until winter kicks in to start looking for warmer outfits. Avoid keeping on buying jackets that last only one or two seasons by purchasing a shearling coat and you won’t shiver again at the mention or thought of the word “cold”.
