Network Services

Offering Network Services (WAN), IP Trunking, Backbone Connectivity and VOIP/GSM Backhauling, HorizonSat leverages redundant tier one backbone and teleport infrastructures with powerful satellites to enable Telcos, ISPs and large Corporations to meet their critical communications needs , the success of their operations and satisfaction of customers and end users.

Media & Broadcast Services

HorizonSat provides satellite capacity for the transmission of news (SNG), entertainment and other programming for broadcasters and Direct-to-Home (DTH) platforms. Utilizing the latest in satellite broadcasting technology, HorizonSat brings quality reception to deliver content to multiple distribution channels throughout the region.

Government Services

With its state-of-the-art infrastructure and access to over 12 satellites, HorizonSat serves as a reliable partner within the Middle East, Asia and Africa region in providing satellite space segment and mission critical communications solutions to governmental sectors.

Turnkey Services

With an emphasis on cost effectiveness and quality of service, HorizonSat's Turnkey Solutions combines consultancy with design and integration, resulting in end-to-end comprehensive solutions that meet the needs of corporate networks, governments and defense contractors . Turnkey solutions include the provisioning of space segment, hardware and software.

Infrastructure

Satellite teleports are permanent satellite uplink facilities located in different parts of the world. These teleports are facilities that are built for the purpose of maintaining high quality communications links with orbiting satellites.

HorizonSat operates its own teleport by name of Horizon Teleports located at Munich, Germany and connects customers with applications ranging from broadband to media programming and distribution, IP Trunking, GSM Backhauling and more.

Horizon Teleports can offer access to C-Band, Ku-Band and Ka-Band satellites located at 55 degrees west to 78 degrees East. With a fully manned team of experienced support engineers monitoring the teleport 24/7, and top-of-the-line equipment embracing the latest technologies, Horizon Teleports helps clients reach their intended goals cost effectively. Our state-of-the-art Teleport is comprised of 16 high-end antennae, is fully secured and redundant, offers high quality coverage and guarantees 99.99% uptime. Backed by a solid foundation of more than a decade of experience in the satellite communications industry through HorizonSat, and its extensive technical expertise, Horizon Teleports assures its clients of a high standard of service and quality at all times.

About us

HorizonSat was established in 2001 to provide satellite services as an effective means of transmitting and receiving data, such as, voice, files and IP-based applications and media content, as a more efficient way to terrestrial connectivity.

HorizonSat has grown its presence in the Middle East, Asia and Africa by delivering quality end-to-end customized solutions to its clients in these regions. As technology advanced, HorizonSat maintained the pace through its services, thanks to its innovative spirit and team. Throughout these past few years, HorizonSat has become recognized by the Satellite industry as a major provider of satellite services and has received various awards for its performance, reputation and quality.

HorizonSat operates its own IP Backbone network through teleports in Germany and France and has access to a large array of satellites, thereby maintaining an edge in providing effective and flexible solutions to large corporations, telecom operators, broadcasters and ISPs.

HorizonSat is headquartered strategically in the United Arab Emirates, from where it operates its state-of-the-art Network Operations Center, maintaining uninterrupted transmission and a high level of technical support on a 24/7 basis.
