### Comparing Search Engines

Search tool	Search phrase	No. of Hits	Boolean Phrase Using the phrase with “+”	No. of Hits with Boolean	Quality of Hits (rate 1-10)	Ease of use of Search tool
<b>Yahoo</b> <a href="http://www.yahoo.com">www.yahoo.com</a>	Italian Culture	185 million	“Italian Culture” + Food	29.3 million	7	7
<b>Google</b> <a href="http://www.google.com">www.google.com</a>	“ “	185 million	“ “	123 million	9	8
<b>Bing</b> <a href="http://www.bing.com/">http://www.bing.com/</a>	“ “	13.4 million	“ “	23.1 million	6	6
<b>Ask Advanced Search</b> <a href="http://www.ask.com">www.ask.com</a>	“ “	Does not list	“ “	Does not list	3	2
<b>Search.com</b> <a href="http://www.search.com">www.search.com</a>	“ “	Does not list	“ “	Does not list	3	2

Based on my search, my top two Search Tools are Yahoo.com, and Google.com. The reason I chose these two search engines as my favorite is because, the results were the most accurate and came the fastest. In the other search engines, when I typed in “Italian Culture,” I was getting hits that were completely irrelevant to my search. Not only that, but many of the websites that were shown were not credible sources. The results that came up from Google and Yahoo.com were practically the same, hence why these two search engines are my search tools of preference.
