

Breast augmentation surgery

In a woman's life, breast augmentation surgery significantly changes her life into something new and better. It gives a new hope and in this era it is quite common and popular. In fact around 98% of women have revealed their happiness and the positive change in their life. They've also shared that breast augmentation surgery has met their expectations and are truly satisfied with it.

Why breast augmentation surgery?

A woman who is unsatisfied and is ashamed of their femininity due to small breast usually seeks for means to get their breast enlarged with surgeries or other possible method. They feel that big and round breast can reveal their womanliness. That is why, breast augmentation is mostly opted and performed surgery in this modern era. And it really boosts their confidence level.

Who can opt for this surgery?

Breast augmentation surgery is basically opted by those women who want to transform their body structure by enlarging their breast size. Yet it is important that the woman should have the desire to enlarge their breast that makes them feel comfortable and make them proud of their physical body and femininity.

Ideal Candidacy for breast augmentation:

Before undergoing breast augmentation surgery, you must consult a certified and experienced cosmetic and plastic surgeon first. They are the right person to let you know if you are an eligible candidate or know. For your knowledge as well, you should know that, if your breast is small and you wish to get bigger breast, or the other side of the breast is smaller, you can consider about the surgery.

How breast augmentation surgery is carried out?

Before the surgery starts, you will be given options for using general or local anesthesia. The local anesthesia do not dozed off the patient but numbs the surgical area only. But normally and most patients prefer going under general anesthesia. After that an incision is made either on the armpits or under the breast crease as the patients prefer for fat transfer. The procedure takes about 2 to 4 hours depending on various factors. Your surgeon will take care that there isn't excess bleeding or any complication after which he finishes the surgery.

Precautions to take after Breast augmentation:

You need a complete rest for 3 to 6 days post the surgery. It is recommended to avoid driving and exercises for 4 weeks. For faster healing and to avoid any infection, alcohol and smoking needs to be avoided. You may feel little uncomfortable on the breast but with time you will be good with it. It takes 4 weeks for proper healing.
