

# Homeopathic HCG Drops | Does it Work?

#homeopathichcgdrops #hcghomeopathicdrops

The [HCG Homeopathic Drops](#) Targets the 3 Types of Fats

## Structural:

In the human body we can distinguish three kinds of fat. The first is the structural fat which fills the gaps between various organs, a sort of packing material. Structural fat also performs such important functions as bedding the kidneys in soft elastic tissue, protecting the coronary arteries and keeping the skin smooth and taut. It also provides the springy cushion of hard fat under the bones of the feet, without which we would be unable to walk.

The advertisement features a woman with brown hair in a braid, smiling and holding a fork with a small salad. In the background, the text "Slim 4 Life" is written in a blue, cursive font with a green leaf icon. In the foreground, three brown glass bottles of HCG Homeopathic Drops are displayed. The bottles have blue labels with a green leaf icon and the text "HCG". The entire advertisement is framed by a green border at the top and bottom. The top border contains the text "HCG Homeopathic Drops" and the bottom border contains the URL <http://www.slim4life.com.au/homeopathic-hcg-drops>.

## Normal Reserve:

The second type of fat is a normal reserve of fuel upon which the body can freely draw when the nutritional income from the intestinal tract is insufficient to meet the demand. Such normal reserves are localized all over the body. Fat is a substance which packs the highest caloric value

into the smallest space so that normal reserves of fuel for muscular activity and the maintenance of body temperature can be most economically stored in this form. Both these types of fat, structural and reserve, are normal, and even if the body stocks them to capacity this can never be called obesity.
