

Site status monitor becomes one of the primary issues either you are a developer or owner. You already experienced that website can be [down](#) or not properly working anytime. You can't consistently sit in front of your computer to keep checking your site! If this could happen on your vacation time or whenever you are outside – Horrible isn't it!!

Web Alert tools made this easy for you. You can get notification for site uptime, downtime status via SMS, email or messenger no matter where you are; on vacation or outside. Check these page monitoring service which can help you to track site performance. Check our [SSD Web Hosting](#).

Site Status Monitor Tools

Downnotifier

Downnotifier can help you to notify you, if your website becomes offline or when your site doesn't contain a particular text. You can also get alerts on mobile. It comes with two options, free and premium monitoring service.
