Effects of Chemical on Animal Feed

India has one of the largest populations of cattle and buffalo in the world. The Feed manufacturing on a commercial and scientific basis started around 1965 western India. The poultry sector was not developed at that time and was restricted to backyard production. The Feed was produced mainly to cater to the needs of dairy cattle. Animal feed is food given to domestic animals in the course of animal husbandry. India is the world's fifth largest egg producer, the poultry industry in India is more scientific. Aquaculture feed is manufactured with highly scientific methods and modern plants that use new technologies and are highly efficient. A wide range of organic and inorganic compounds may occur in feedstuffs, including pesticides, industrial pollutants, radionuclides and heavy metals.

Dicalcium Phosphate Manufacturer In India

Dicalcium phosphate is the calcium phosphate with the formula CaHPO_4 . [Dicalcium phosphate](#) is mainly used as a dietary supplement in prepared breakfast cereals, dog treats, enriched flour, and noodle products. Dibasic calcium phosphate is also found in some dietary calcium supplements (e.g. Bonexcin). It is used in poultry feed. It is also used in some toothpastes as a tartar control agent. Dicalcium phosphate is a combination of positively charged particles of calcium, and negatively charged particles of hydrogen phosphate, which is interchangeable with phosphate in the body. As such, it's a source of both the mineral calcium and of phosphate.

Animal Feed Manufacturer & Supplier in India

Feeding animals is the most expensive part of animal agriculture. To keep costs low, some farmers feed by-products from other industries to reduce the amount of hay and grain they need to buy. Calcium and phosphorous are two very important minerals in an animal's diet. We are instrumental in offering our clients with DCP- poultry feed grade. Di-calcium phosphate is a free flowing white powder that is based on rock phosphate and contains no animal fat.
