

Trace Series

Trace Series, now available in its web version, on its website

An app that recommends series, based on the user's profile information, now available on the website.

Coimbra – January 5th, 2017 – Available from today on, the Trace Series app gives its users series suggestions based on a profile built upon a data set. This application provides its users with a series recommendation list containing details for each suggestion, such as an overview of the series' plot, an average vote rating by IMDb users, a promotional series poster and a button for the user to rate its recommendations

To get his custom suggestions, the user has to access the application website at <http://traceseries.com/> and select the web version option. Ensuingly, he will be directed to a page with a form, which he has to complete with information about his gender, name, age group, job, hobbies, favourite genres and, if applicable, series he has seen, so the recommendations aren't redundant (for example: female, Ana, 30-44, lawyer, swimming, Comedy Crime Family, "Modern Family"). Once he fills out the form correctly, he should press the submit button. As a result, a suggestion is presented individually accompanied by additional details that aid the user in his interest for it (name, genre, rating, release date and overview). Additionally, if he clicks the button on the right side of the window, he can consider more suggestions. Once the user reaches the end of the suggestion list, he will be presented with the option to rate his suggestions and leave user feedback! Trace Series is completely free, available at <http://traceseries.com/> and accessible wherever you are!

For more information, check out the application website <http://traceseries.com/> or visit our facebook page at <https://www.facebook.com/TraceSeries/>. You can also contact us via e-mail at info@traceseries.com.
