

Homework 2
Initial Design of your Web application

Due 11:55PM – Friday February 24th, 2017

In this homework, you will develop and submit an initial design of your web application project. The design of your web site should be relevant to the type of service it is providing. Choose your style, layout and content by looking at examples of pages for similar purposes. Below is a generic set of specifications for what you need to have completed for the initial design.

1. Develop fully functional HTML and CSS code for a minimum of 4 pages.
 - a. Entry or Home page – This page should have a layout using header, main, footer, id and classes. The page should have actual content including the navigation bar. The page should have information about the site including some images. This page should be named index.html
 - b. Navigation bar – All pages should have a consistent and working navigation bar. The navigation bar should have links to all the pages you are going to have in your website. The navigation bar should be at the same position on all the pages.
 - c. Form page – This page should have the navigation bar and space for a form for collecting and requesting information. You will design and develop a form in Homework 3.
 - d. Gallery page - This page should have the navigation bar and space for a picture gallery. You will design and develop a picture gallery in Homework 4.
 - e. Product or Service page – This will be your 4th page. It should have the navigation bar. You can choose the content for this page.
2. All files should be appropriately commented.
3. Upload all your HTML pages, CSS document and images to the web server.
4. Submit all your HTML and CSS files as a zip folder on Canvas. Also provide the URL of the home page of your project in the comments section.

N.B. Include in the comments section any additional functionality provided to be eligible for extra credit.
