

By gee, last night, I had a shockingly bad time with toothache. It seemed to me that the quicker the offending object was attended too, the better. Of course to call one of my own teeth an object really showed that it was now only a dead type of appendage. Of course a diagnosis by a qualified Dental Operator had not been carried out. So it was over to a friend of mine who had some minor Dental Problem, in the last few months. Seems he has a better “Group of Fangs” that he had bestowed upon him than yours truly (ME).

I do not like the idea of anyone toying around with hands in my mouth, and those metal things, which I am sure have names which, I do not know, and have no intention, in enquiring about, Suppose it is a Dental phobia-not much in a name, I really imagine that there is some treatment for this type of condition—one treatment session--- would do me as my mind has been made up, in the distant past, to have all those pain situations, removed once and for all.

Dental Health, when do I have all my teeth out and “All Out all In” is the last session I will have to endure, Do not believe this my friend!!

Steve, my friend, was given the chance to get mobile in the Dental Field. Good old Steve arranged for me to have an emergency appointment, after that extremely painful night.

Apart from my phobia, things went well. Once fixed up, for the shocking pain, I was thinking too forget the rest of my Dental plans. But no, I was going to persevere. And become a Denture cripple for the rest of my journey on this place.

By the way, my name is Andrew-----Aged 39

Married to (my lovely soul mate) Veronica—About 33

Son—and a very cheerful lad Adam-----Aged 12

Daughter No model-Astrophysics! Rebecca---Aged10 3/4

Of course the first, of six appointments was, to meet all the members of Dr. Saul's (Surname) Team--Operators, Nurses, Receptionists and Technicians. No real conversations were had. And I do not play golf!! I sat in the reception area, and had a feeling time was not mine. I waited.

There was only one other victim. And like me a few weeks ago. But with a towel around his cheeks and lips !!

On the Coffee Table, some relief, Time Magazine---National Geographic There was a magazine on, well it seemed to me some thing to do with your, mouth and those things called teeth.

There were many adds in the magazine. But a few of the Dental articles caught my attention, only because of the really magnificent smiles of the models, who were, of cause, picked for

their extremely beautiful teeth, which had to be the result of a number of things, such as discipline and a regime that was followed on a daily basis. Of necessity, their demeanor would have been very, very pleasant. To find this out, conversation would have to be partaken, This would entail a number of questions being asked such as sport, diet etc.

Then again, there are some models that only avail themselves in work that does only entail looks. Personality is really on the “Back Burner.”

Browsing through a few magazines that were fairly recent editions. I began to wonder why these names—Fluorine and Fluoride—were, believe it or not, cropping up in every edition.

What have we here, my enquiring mind thought, apart from my “Thing” about where I was, (In a Dental Office) I really want to get to the bottom of things in general, and have a thought or two, plus, to sort out, when,where,critical analytical, and specially, affects on my family Veronica, Rebecca, Adam, and may I ?----- Andrew. I thought a good idea would be for me to ask the receptionist if she would mind to copy, some of the articles, on these substances. When I asked the lovely girl, she said that I could have some of the earlier editions- they were not that old at all, six months, some earlier. As I found out later, but not that much, the time factor was not that important, due mainly to fact that my interest and enquiring mind, found out very soon that Fluorine is an Element, and Fluoride, is Fluorine with an electron added, called an Inorganic Anion, Number 9 on the Table of Elements. I did chemistry at College, and this

information came out from under the ubiquitous pile of leaves, near one of the lobes in my brain, left, after my education. It seems as if there is a dental—Fluorine!!!---Fluoride relationship and antagonists, do not gel in any way, and the old business of repairing broken bridges, I can say, is along way away, I think it can be said that the children of the world and I mean East and West, are the ones to suffer. And was I to find out in a very big way, how much pain and suffering, disease, infection—and a lack of caring---in general, I was thinking a minute ago, how are we allowed to show a complete lack of awareness in the condition, of our children's teeth and oral health. Should we be caring of other parents children, I am saying, teaching in the third world, on Dental Issues, has to include parental education to help their own children. And, and a definite foot forward for us all---Dental Conditions, are preventable and rife. Pain related to preventable and avoidable, oral conditions I, am saying conditions, because to say. A disease, to say that Dental Caries is, I was to find out, much much later , not only tended to cause guilt in those denying, that an avoidable treatment for a—Disease, Condition, Malady, Ailment, plus of course pain that in many parts of the body, can be relieved. Hey- Hey. I myself had that Dental Malady back about 6 weeks ago that means that me myself had a treatment for a Condition. At a stage, I wondered whether I should have had Root Treatment. I was talked to in a very informal way about this—By the way it was not yesterday, that my dilemma, was in action. Cynical-I ? Root Treatment was talked, and dismissed. For reasons of, future treatment (Crowns, Bridges)if the tooth was lost but no, the dental cripple me, was in action . Every thing was in a situation of flux in the Western World Dental World. Not for Andrew though—but he was in

the mood of taking a good look at some of the dental arenas coming up. He was always in the quest of, wait for it, that is right, Something, He was a very astute fellow and really believed in, no. 1 adage “The Devil finds work for idle hands “— has to be a Devil of course. And did not take notice of adages Anyway. Anyhow elsewhere. Things to do! Andrew decided to take the “Proverbial Bull” by the horns. It did not take too long, at all, for Andrew to find out that Fluorine-Element 9, on the periodical, was a real NO NO, of an element the most reactive of the elements, when that is said, remember a gas is F, a lot of people ashen when they see that, there is another gas rather than F, and that is Cl—Chlorine. Not delving, here, but for interest, there are 7 other gases, 6 are what are called the inert gases, a very small number of reactions, if any! ( If you, want to know about these and all elements, natural and artificial— <http://www.ptable.com>-----is the place for you.)

It is about time that we asked what was his occupation. College education, and studied Chemistry to that level, and other subjects. Naturally he applied for a no of positions. And he was not out in the acumen department. Andrew applied for a position, not in a foundry, but in a labourity . Actually this a bit hard to guess, the actual definition was --- designing and formulating, Alloys, in labourity conditions. Great things were to come. Andrew has been doing a number of things. Military contracts not excluded. Not a full knowledge, but he is a very rounded person.

The dental condition of Andrew, he anticipated himself, was not that urgent. Of course—idle hands, nothing was not for Andrew.

On the shelf in the kitchen, Andrew remembered the magazines from the Reception Room, at the dentist's. Did he see a chance to use—whatever he had—and he did know that he had what others had to know (Reader, read the last sentence again) Andrew was in the prime position, to know why, his labours were required, for the alloys. The fact that he had spare time, in his new position, he knew waste not---the one and biggest of Time itself----Time. Waste time and you are a time waster-actually think.

Magazines are usually known, judged, by their covers, giveaways, shininess, thickness, position in the rack etc.

Obviously, Andrew was in no concern, with this marketing.

He browsed through those Dental Magazines, at home, and having an acute sense of the rights of man. He discovered a lot of the reading space was had, by the fact that he was taught at College. "To thine own self be true" Polonius to Hamlet and Laertes his son! In Hamlet.

One day Andrew thought he would take Adam to the Dental Office with himself. It was one of the two appointments for impressions for Andrew. If it was to be an immediate denture. No real loss of looks would be suffered. It was a good for Adam, to really associate with his father.

Here is the position I have been looking for, Father, Son, and Health

In this case, Dental, for our boy Adam in the future,. Let us think of a few, Things Dental.

Where I am going to start? Let us start by saying,

Cleanliness -- Is next to Godliness

Accidents happen to occur. Try to avoid them.

Diet, Mum will help you with this. Big words are coming up. Dietician, Will we all give up fermentable carbohydrates?

Looking after what we have got, looking after ME of course, when we think of this. It is extremely essential and, If were are here but ME being extremely selfish what is he going to put on for the children.

Money Donation for funding toothpaste, toothbrush and mouthwashes

Leaders in the community, I am speaking to you, never, never. Do nothing----Dental pain, Is in the great majority and number of cases extremely painful. And in a h—l of a number of cases could have been relieved. By prevention-----F- -----

A silly type of situation, would be “Coca --- Cola” swallowed with a can of Coke for breakfast. Not only one breakfast but for the rest of the week.

After all these events there is only two solutions, as it seems to me.

Most of us should know that prevention with Car seat belts is necessary. Seat Belts. The point here is that it is preventable. Other examples will come.

What is the point if you do not have prevention? Trauma to young children is the equivalent to the lack of Fluoride Prevention, for their teeth this means, avoid dental trauma , and once again Dental Prevision ----- F- ----- is a definite Preventive measure

I know that Andrew is a very able father and able to go with best advice. We are going to get some advice- but of course is it the best. Hence politics. Andrew was in a position, to enquire about much of the political problems that were bestowed on a number of voters, before (results, needed) and after ( looking for results). This was at the Local Council Elections.

Andrew's appointment, with the dentist was tomorrow. As usual, Andrew was not late, his philosophy demanded, a type of attitude. That he could be true to. That is not sloppy, as simple as that, of course dirt was out the door before any philosophical thoughts.

In the waiting room, of course Andrew waited. The receptionist from before beckoned Andrew to her desk and asked if he had seen the latest edition of the magazine, that Andrew had received from her last time. The receptionists name was Lenora, and a lovely girl she was, and of course she still is. Andrew was slightly intrigued, about at the offer of the magazine. Lenora gave it to Andrew and said look up page 8, knowing a bit about human nature, thought that it was quite

near the front of the publication, meaning of course that it was meant to be read before page 58. A lot of the pages were devoted to advertising. Back to page 8.

A double open page, and too bring this to the attention of Readers. And particularly Andrew.

THIS

FLUOROSIS is a Dental Problem BEWARE.

I am fairly sure that Beware in a journal, would be a slight Red Rag to Andrew and how right I was, Crimson would be the right terminology, and Andrew knows that Beware can be used in just about any connotation that has been thought of even (Beware of the dog he bights) and there is no sign of the animal, of course, because there is not one. The readers were of course to come to similar conclusions.

Of course this analogy, would turn into it is a small dog which, of course would be no trouble at all. Andrew, as astute as he was, soon had a chance, on the same day, to realise that something was going to be similar, to this substance, Fluorosis, if it was a substance, He soon found out that it was a condition of a very, very small no of teeth. In the whole population.

Andrew found out soon enough that knowing himself, the condition had to be ascertained as to be what ever it was and if there were variations of the features, why, how, maybe when, treatments. Of this Fluorosis He was certain that it was going to be a long battle, which with, he did not know, but his knowledge of the nature of humans was to mean, a battle of the Mind, and the Psyche. Readers, there are a number of images. Of the condition known as FLUOROSIS They will be able to be perused

at a number of Fluorosis images, by jiminy, one has crept in. Of course it has to be the last Fluorosis typed word. This image you will see on the mouse click In fact there are no such things as good and bad Fluorosis. To say that the condition was bad, is correct, but only to the degree that it can be seen, that in most conditions, and by that I mean, was the condition there at all. The image that you have seen. On that mouse click revelations, appeared, But for the large number of results.

As it so happened Steve, My introducer to Modern Dentistry, had an appointment just after mine, so we arranged to meet after the sessions of Dental Morphology, this of course meant that we all have a different body structures, I feel that this is of little consequence. When the body has lived enough, I am very sure that the Alter Ego "the other I" has done enough to look after itself, by that I mean the whole body with all its accruements, in a majority of cases, only gives up the battle to be human, not when the "I" gives up but when the other "I" does, philosopher I am not, but wait a minute, i should think of that for a moment or two !! Enough of this so called "Frivolity" Did you realise that this so called Philosophy was humming around inside my head, believe it or not, while I was having impressions, for the dentures, for rest of my Dental Adventure, or should I say, Misadventure! A big decision to be a Dental Cripple. By the way you can do it only once, a very, very strong point.

Of course I had kept the Chair warm for Steve, I should add that there were five others, lucky Steve got into my very warm one. On going into the surgery, I said to Steve, on being ushered into, a possible oblivion, being in a Dental Situation, Steve have you

heard of a condition called Dental Fluorosis, to my surprise he said, yes. Not really a surprise, for he had been for treatment “Dental, of Course”, two days before, Steve said to me, seems as if we have to be ----Beware of this Dental condition, Fluorosis. We are blood brothers, Steve and Andrew, so I suppose it is not the right word to say we luv. Each other, but every man is not allowed to say that, but of course most do. Both Steve and Andrew, more or less at the same time said why are those on high using that word “Beware”. I think it is a very weak word as you can be, beware of many things, snake bites, road traffic, a bite from your new brothers new teeth, and also of course the dog from before. How big is that canine? There is an obvious connotation here, the human canine tooth, you should not use these, many treatments of this, in other words, do not be stubborn. If in fact he or she, dogs, most probably exists, in most cases it isn't there, we are talking about dogs here.

Steve did not have a very long appointment, I believe it was to see if treatment was necessary or not. One quite small restoration, he was informed by Lenora. After the appointment was made by our lovely receptionist. Andrew had an idea that was not quite brilliant, but really to the point. Would it be possible to see Dr. Saul for a few minutes? At this point, Lenora said he is having a cup of coffee. “Only a couple of minutes” While she waited, strange as it, was, I think. She said that Dr. Saul liked to be called by his given name---Isaac. Izzy that turned out to be. Lenora could see our bewilderment. And said it was easy to work out. He happened to like people and in a lot of cases, he had found out over a number of years, phobias of Dental Origin were wide, over a great area.

Our few minutes were about to happen, i.e. a small chat with Izzy. He came out of the café area. And said high there.

Of course we were going to ask him about “Fluorosis”. Steve bought up the subject with a question, a very funny one, do you believe in “Fluorosis”. We all have to believe this, said Izzy, obviously it is present, as occasionally we see a condition called as such. There is a very, very obvious type of issue. At this stage, Izzy said that most of this condition was extremely hard to detect. And then Izzy said to Lenora, when was the last time we had a case of Fluorosis. Lenora said that it was a long time ago, and then she said a remarkable thing to one of the other staff, Lillian, Lil. Said Lenora, did you happen to hear what was said about Fluorosis. Lil came back with a curt statement, “yesterday”, But, said Lil, you must remember that the last one before yesterday, was seen in 2011, it is now 2015. Andrew’s antennae went up immediately---“Where does the BEWARE situation come in”. A lot of thought was going into what was going to happen. Are there types of this, so called condition? Steve saw that a consensus was looming up, and in a hurry. The conversation was only being held between five people. Then common sense came into this event. Number one question—how many patients are seen in the Dental Office of Dr, I Saul, was very easily answered, as Lil. had just completed an Audit of the office, to reconcile, to Government standards. Lil. “the Audit has just been finished.” “ How many patients on the books’ asked Izzy, 65,000, came back Lil. Most of our patients are regular, in most cases, every six months. This was when there were Four Operators working, what about new patients, asked

Izzy of Lil. Lil. Came back with 6.000, per year. If this is accurate in the imagination time, the figures here are rounded off to the nearest 25 for all, per year, or numbers on the practise, and the differences are due to Booking Clerk errors.

Andrew and Steven had come to a conclusion. People are being asked to **“BEWARE of NEARLY NOTHING”** of course the “Research” was not research. The reason for there was no research was needed-- Reasons 1. Lack of people having the condition Fluorosis.

2. There is no pain associated.

3. If, the condition is mild and the % here is low low—To believe, we believe statistics! below 2% and lower. **“BEWARE of NEARLY NOTHING”**

4. There are very, very good treatments, not the expensive rip-offs that are heard of

5. No contagion, infective or otherwise. And Andrew and Steve agree.

If the rarity occurs, please let us look at the multimedia,

### [Extremely Mild Fluorosis](#)

Of Andrew and Steve we can say they are amateurs. In a lot of cases, these so called amateurs, have been instrumental in many cases of inventions, Andrew was the type of person who would hold his own candle. He invented alloys, for the Air Force,

which in the future would make aeroplanes. more manageable at speeds over Mach 1.6 and other products, which made his position at work far more satisfying and more chance of promotion. Steve was a lot older than Andrew, and was concentrating on his garden. Vegetable and Flower, Kitchen and Living Rooms.

Andrew was concentrating, more and more, on his family—Veronica, Rebecca and Adam. The situation of the health of the family was excellent. But as Andrew and his teeth were going to be separated, he hoped not for a few more Dental episodes, but none at all, the case is treatment for pain and not much more. Tut---Tut. But did he detect slight “Crooked” teeth in Adams mouth. He certainly noticed, and by this time he had a few, dental words up his sleeve, words that he had picked up in the small Dental adventure he had.

We heard, that at the moment there was an Endodontist visiting the Office of Izzy Saul, Steve was Fey. Being an alloy specialist, Steve remembered that in Dentistry very fine metal alloys were used in the Endodontic Department. Lenora was in the office, but opened the door when she saw Steve approaching.

Andrew asked could he have quick word with the Endodontic. and he did have quick word. “Do you Operators need a new, very strong, and sharp Reamer System” The Endodontic said there is always place for development, that was the quick word Steve got.

All this “Dental Stuff”, had started when Andrew had bad toothache and Steve came to the rescue!

This approach to a Dental problem is not satisfactory. That is wait for a “Mess” and get someone else to fix it up. Prevention has always been the best treatment, especially when prevention is available, but some minor groups, such as Antifluoridationists say not. Andrew said it may be time to man the hatches and really delve into what has happened. What we have is :

Fluorine—The 9<sup>th</sup>. Element on the periodical table. Let us leave it at that, a deadly gas,, that is never found in its natural state.

Fluoride--- F- the ion of Fluorine, as this, has an extra electron. Meaning that when “Bonded” to an element that has lost an electron that the bond between the two is very strong—for example Calcium and Sodium. There are many other Fluorides. Metallic and Non metallic.

Fluorosis---Which is seen as a Dental aberration, which is rarely seen, and as a Dental Operator in the minor cases is very hard to pick up. And minor is the real name of this condition.

## What can be seen, in the mild cases of Fluorosis?

Stains ranging from yellow to dark brown.

Surface irregularities.

Pits, which can be noticeable, in minor cases.

The vast majority of cases are mild, and only about 2% are

considered “moderate.”

It occurred to Andrew, and then Steve that in prevention of tooth decay there are a number of things that can occur. There is Dental Hygiene, and of course Oral Hygiene. And the use of Fluoride as a chemical compound—Never use the word Fluorine as it is very poisonous—but of course Fluorides (compounds) very, very innocuous to our children, when Fluorides are used for the very explicit Dental Decay avoidance procedures, in water supplies, and supplementary Fluoride used in Toothpastes, Mouthwashes, Chewing Gum et.alia. Up to this point Steve and Andrew, together had a little knowledge of the Fluoride scene. But they knew it was in the water supply that their Council supplied to their homes. Their water had been fluoridated for a number of years. And the amount of Dental Decay in the children’s teeth, in their area, compared with similar communities, in both size, and weather---BUT without Fluoride--- Was an extremely worrying set of affairs. Fillings and Extractions everywhere and very early Dentures—Now here is the Rub--- What could have been a great defense, the Fluoride Equation is going to be----- Extraction of deciduous teeth due to rampant caries--- Teeth left, in the mouth move forward---Loss of Space--- No Room for permanent teeth--- Please call the Orthodontist.

At this stage Andrew and Steven were congratulating themselves on the fact that their children’s teeth had only a minimum number of cavities. Compared with their long

distance cousins in the non-fluoridated similar, community. It so happened that Steven, who has two lovely children, and both were girls Michaela, of course she has the usual name shortening to Michy, the lovely Michy was thirteen. The other daughter, was Jan, aged nearly fifteen, of course her name didn't need to be shortened, but of course it could be lengthened i.e. Janie.

Once more a few things were starting to gel for Andrew, It seemed to him that, the marked difference in tooth decay, between the two city areas, one where Andrew and Steven lives, and the similar area from afar. Had been discussing the F- problem.

I am not going to suffer you all about the F- concentration, it has been talked about so much, even I am about to say 1ppm should be the dose. In that case the Optimum, most definitely has to come into play. Optimum must be carefully calculated, and there are some very accurate calculators, measuring devices et.al THE OPTIMUM HAS TO CHANGE due to variations in climate, rainfall, naturally this may change in different areas due to these and other conditions. And please these results are not interfered with or are any other human way.

1. Andrew, after a few days “deliberating” had to say this to himself. And being a bit of a statistician, Andrew took it on “himself”, to show figures, Ha Ha—but then

he thought, where would the figures come from. And would they be accurate?

2. The high numbers that were negative gave a feeling to Andrew that was due to the very empirical value of the numbers. So he, as a layman, was going to seek opinions
- 3.
4. From—Dental operators. Dental Nurses Dental Receptionists Dental Technicians Professional suppliers to the Dental Profession. It must be remembered that bias can come into all of this-- Figures and Realities—[opinions](#)—observations.
5. After correlating all the evidence, it become very obvious that there was a shocking increase in Dental Caries where there was no F- in the water supply as to the areas which had extremely accurate F- conditions. See above, and in the accompanying Web Site. As with all the evidence, which were out in Strict Laborite, and Health conditions and for over 6-7-Decades. The chances for any faulty, wrong and suspicious results, is not only wrong but nearly impossible.

Area One No F-

1. Water NOT F-

2. Rampant Dental Decay, of deciduous teeth.
3. Numerous extractions, of deciduous teeth and Permanent Teeth
4. Natural Gaps are closed between the Teeth.
5. Rampant Gaps of course are formed between the permanent teeth!
6. Rampant costs for Orthodontic Treatment
7. A very major change in Lifestyle due to wires bands, interdental ligatures, and what ever.
8. Oral and Dental Hygiene must be carried out to the highest degree.

#### Area Two F-

1. F- in the Water Supply.
2. Hard to explain this. Normal, average expected, regular. Of course this is the type of treatment that would be expected in an area that has had F- placed in there water supply , of course it would have been a few years before affected F- would take affect, and of course this a great shame i.e. a lot more teeth, and pain relief would have been avoided. Point Point-----“ Doesn't that young girl, I think she isn't even four, look terrible with those front teeth missing -- I should think she comes from that area, that does not have F- in the Water Supply” The answer to this is of

course, the poor little girl. And of course again, and again in a city there would be, depending on population----

10 100 1000 10000 100000 1000000

It is only toothache

Suffer the little ones and come unto me.

I cure all Dental pains and the ailments caused by the lack of F- and of cause my Loved ones----Never ever put F- in the water it may, by Jove, cure some toothaches, gaps and by Golly Gee Pain. You know the one “Mummy I have a pain in my face, do not be silly Love it is only toothache, it will go away” it does not, try, it yourself some time.

Here are some examples of Dental and Oral Hygiene.

Of course O & D Hygiene depend on the presence of teeth. Gee I was truly amazed at that, on second thoughts, I was amazed and then amazed again---Whew. And believe me I love being facetious about this. I really believe most of us love pain from the teeth, and sometime gums, especially when I am trying to eat at meal times. I am sure that it was Patsy, who had missing teeth at the front of her mouth, a very, very pretty girl, the main trouble with her appearance, was not looking at her face, as she did not like the look. Do I find that amazing – YES indeed.

But these days the needles are so sharp the prick is not that bad—so it does not matter that much—a better thought let us wait until we have 5-6 teeth to come out—whoopee, we can have anesthetic and get them all out at once. Of course pain, was there all the time—waiting for the number to get to 5-6 teeth. In all these cases it was the end affect that mattered or not, we must forget PAIN---some one once said we had to suffer—well here we are, those teeth again. Always to the fore in supplying pain.

There have been cases of young --- Patsy and Michael, Losing pieces of their teeth—They are baby teeth, only!!!!!!!!!!!!!! From the tooth as it was decayed so much pieces it had to happen. What Oh ---if it goes into the lung. You know very well, I cannot be facetious—about this -----

**LET US ALL HAVE A LONG LOOK AT WHAT  
COULD HAVE HAPPENED TO THIS  
SWEET YOUNG – PATSY – AND MICHAEL  
EVEN I AM SHUDDERING.**

**IF NO FLUORIDATION--- YOU MUST GET A PLAN—FOR  
TEETH**

A Dental Surgical look here—Pain—Extraction number who knows! Inhale a BIT TA TA maybe—Swallow a bit- usually OK

A DENTAL PLAN I HAVE HEARD OF

IT HAS BEEN CALLED THE 17—27. PLAN

NOTHING DONE TO YOUR, TEETH ONLY EXTRACTIONS—TILL YOU ARE 17—THE REASON FOR THIS IS THE PERMANENT TEETH HAVE BECOME REALLY DECAYED THE CANINES ERUPTING AT 13YS IT IS SUPPOSED THAT APART FROM WISDOM TEETH AND THE PREMOLARS. THEIR AI'NT NO MORE----TEETH---ABERRATIONS CAN HAPPEN THOUGH.

Andrew is in this type of class, but it could be easily rationalized, for his age group.

Being Chemically minded Andrew talked to Steve, Hey Hey let us show the names of the chemicals that provide, instantly and nearly pure F- Sensible people know that it is the ion that counts, what does mulloch in the quarry do with any thing. Maybe the Antifluoridationists, could find a use, as I am sure they will, maybe in building dams, which we need badly.

The chemicals----Sodium Fluoride

Fluorosilicic acid

Sodium Fluorosilicate

If any thing is said about the purity—of these additives---Just tell to keep quiet in the name of us all humans who may not have made the grade in the HUMAN ENDEAVOUR STAKES.

**AMEN**

NEARLY.

Emergency—Emergency---It seems that somebody has mixed up the photos of some teeth. They are quite concerned. About the outcome. Someone mentioned that there is a problem with Fluoridosis. An antifluoridationist solved the problem fairly fast and easily. His results are shown below.

I SUPPOSE THE TRUTH STAKES WILL BE COUNTED  
THAT MEANS THAT THE TRUTH TELLERS WILL BE LYING

***LET US MAKE UP, ONE AND ALL NO  
MORE LIES.***

Here we have, 1 ppm F very  
Obvious too.

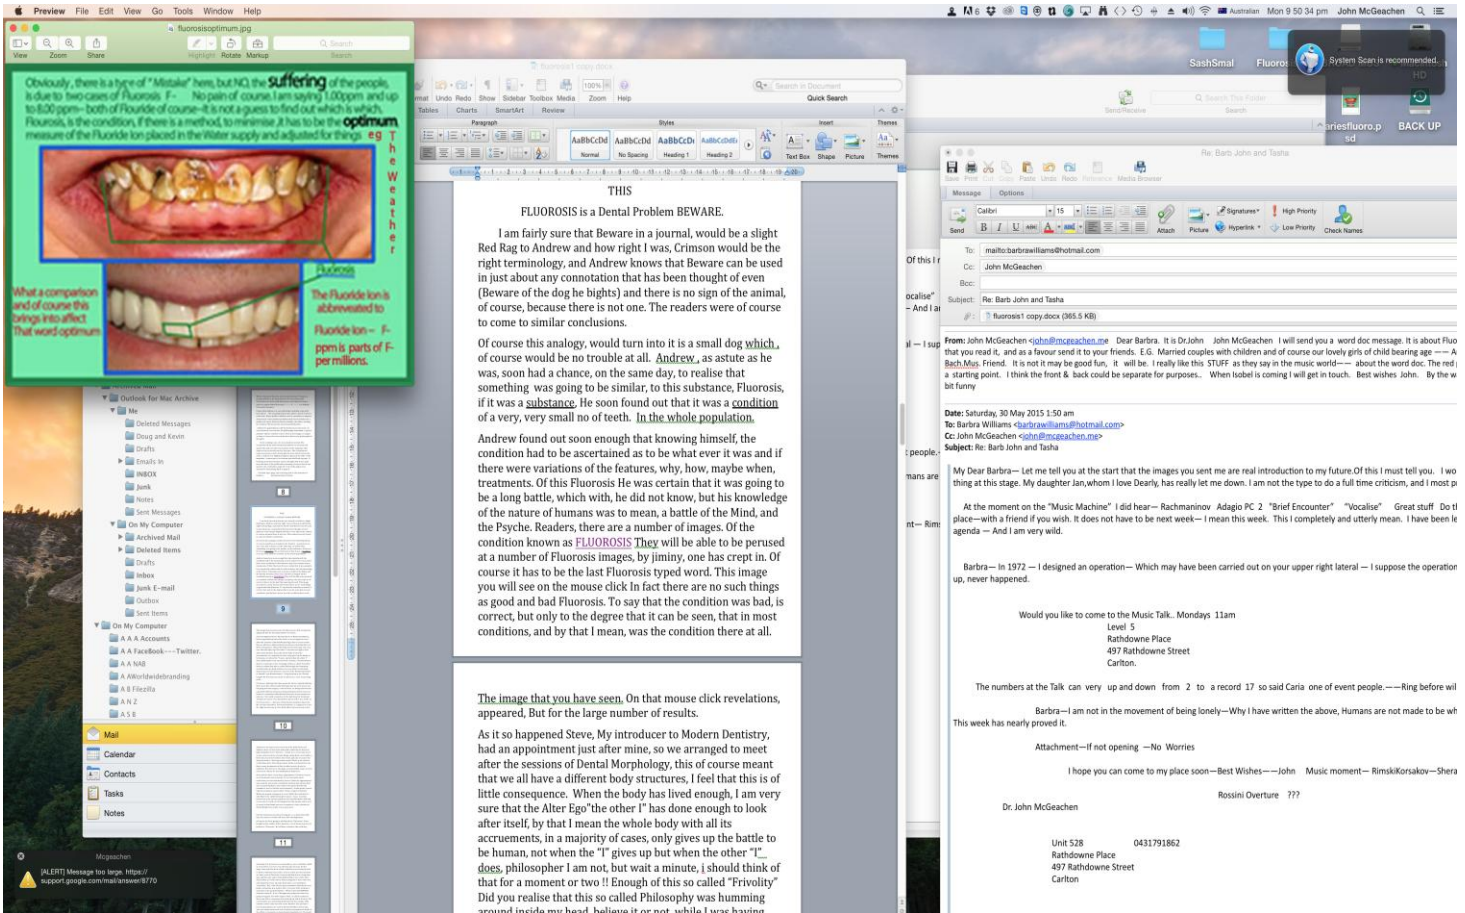

Far too much F- of course this  
Very, very, obvious of course.

I would say about, 8ppm F-

Do not you,  
**Think.**

Do not you,  
**Think.**

## Hyperlink Page 9 For the green part Andrew

Of course this comparison is ridiculous. Imaginations are going ballpark. Obviously the BAD comes from this, I do not know. Naturally occurring F- thinking though, this has to be.

Do you really think that our Water Technicians would over dose us? The AF- s would lead us to think the technicians do such

**Bloody Lies**----Sue me, to court I want to go.

And try to clean up all the F- Mess.

Where the F- comes is of no concern at all, the F- is always the same no matter where it comes, The AF-s are lying if they say otherwise.

A lady whom I think is very nice, I was talking today too.

No F- it is the water, it is due to the  
Constabulary Government.

By the way this lady, works in the Medical World. What do these people want. A choice of Government. Lots of -isms around. The main ones below ??

Fascism Communism
