

# How to deliver the best learning experience with the simplest VDI solution

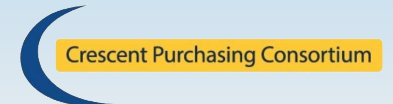

HyperCloud™ from HyperGrid™ is an easy to manage, Enterprise Cloud-as-a-Service, delivered on premise as a pay-as-you-go model.

As one of only 15 selected UK CPC suppliers, **Nviron** helps Further Education organisations like yours to make the very best use of IT budgets and resources.

The CPC offers best value purchasing arrangements for Further Education, Academies, Free Schools and Schools sectors.

## Why VDI in education?

### Teachers

Teachers improve the way they leverage teaching materials, increase their productivity, reduce stress, and improve the learning experience for students.

Increase Productivity

Enhance Learning

Achieve Results

### Students

Students can access their applications and centrally stored files, no matter where they are, or on what device, which results in a better user experience and increased personal success.

Deliver Satisfaction

Increase Productivity

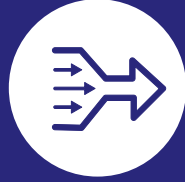

Achieve Success

### Learning Establishments

Educational establishments attract the best students by offering the ultimate learning experience, save time and money by extending asset lifecycles, and simplifying desktop and application management.

Simplify IT

Save Costs

Attract Students

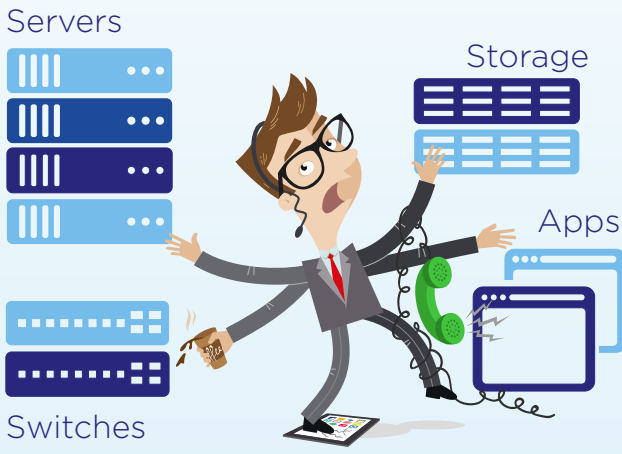

## Operate in a dynamic market

VDI also makes it easier for learning establishments to acquire and merge with others, enabling the quick and easy integration and roll out of new learning tools and materials.

## But which way is best for VDI delivery?

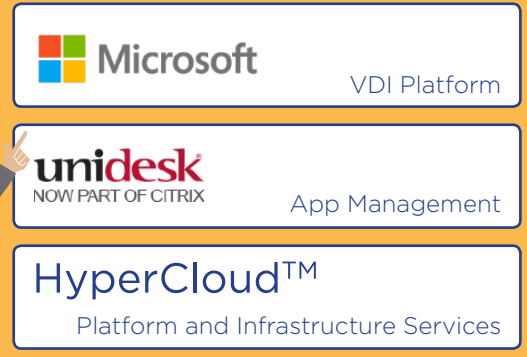

### VDI on a Traditional Infrastructure

Traditional infrastructures, with disparate components and high cost hypervisors and brokers, are a headache to manage and scale.

OR

### VDI on a Hyperconverged Infrastructure

All flash storage and application level Quality of Service means you can deliver application performance with simplified management and reduced costs.

**High cost**  
Costly hypervisors & brokers, with high management costs of multiple devices

**Reduce VDI costs**  
High performance VDI from £400 per desktop and lower the cost of VMs by 65%\*

**Hard to scale**  
Difficult to scale separate compute, networking & storage at the same time

**Scale with ease**  
Pay-as-you-scale compute, networking and storage to meet your needs

**Difficult to manage**  
Complex range of multiple tools and suppliers are a challenge

**Simplify infrastructure management**  
Manage your compute, networking and storage from a single pane of glass

**High use of space and energy**  
Multiple, disparate appliances use more energy and space

**Save space and energy**  
Reduce energy consumption and datacentre footprint

**Poor performance**  
Increased support and user frustration caused by poor application delivery

**High performance**  
Runs 4X more virtual machines (VMs) and performs 6X faster\*

**Slow to deploy**  
Complex and time consuming roll outs of new applications

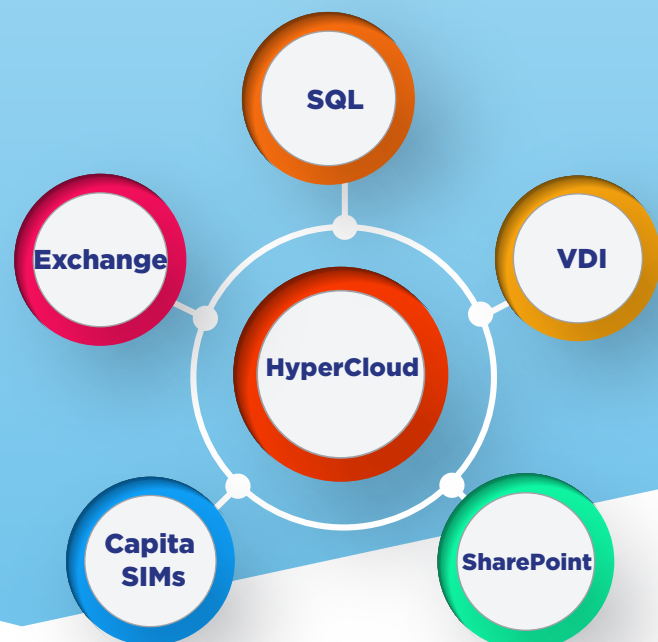

**Speed VDI deployment**  
Build and deliver customisable desktops in minutes, not weeks

\*Third party tests

## One More Thing...

HyperCloud's **self-service provisioning, automation and orchestration** tools make it really easy for you to deliver many other services....

## What next?

Learn how to deliver affordable, high performance VDI with Microsoft, Unidesk and HyperGrid.
