

AUDI MMI 2G/3G/3G+ Shortcut keys

In this document the following shortcut key sequences are shown for each MMI system.

- 3-finger Reset (*Soft reset of MMI*)
- Update Menu (*Red Engineering menu*)
- Screenshot capture (*SD Card required & Copy Script for MIB*)

Please note the appropriate vehicle type and Infotainment system to determine the correct shortcut key combination.

Note:

- Observe the key press sequence as described on the following pages – press and hold the buttons in the order they are described.
- In some instances, the first button must be pressed slightly before the second (exception: Screenshot).
- The MMI reset combination will reset the MMI once the buttons are released. Holding down the buttons for an extended amount of time is not necessary.
- If the MMI screen changes when the button combination is pressed, then the combination was not entered correctly and will need to be repeated.
- For screenshot capture, the buttons on the MMI control panel will flash if successful. An SD card will need to be placed into slot 1 prior to taking a screenshot. The images will be placed directly onto the SD card.
