WORK EXPERIENCE

CABEM Technologies

March 2016 — Feb 2017

Software Developer

Added features to and co-maintained internal and external IdentityForce web applications (www.identityforce.com). For a shorter time frame, worked on the NTS application (www.nts.com). Features ranged from small to large. Some of the more notable projects included adding two-factor authentication (full-stack, in addition to settings functionality) to multiple web apps, incorporating Vantiv credit card processing into IDF web applications for new cards (alongside the existing AuthorizeNet for current cards), and designing an API for IDF using swagger.io.

Rezzit21 (startup)

August 2015 — December 2015

Junior Developer

Full stack web dev (PHP, MySQL, JavaScript, JQuery, Enchant.js, Google Visualization, Moment.js, etc.). Developed for the Rezzit21 web application.

Reskinned parts of the app, added features (front-end and back-end work for features added), and enhanced existing pages. At one point, was the sole developer working on the project. Moved the site to Amazon Web Services. One afternoon, rerouted the site and create a limited demo of part of the app.

inSitu Mobile

March 2015 — June 2015

Technical Support

Full-stack web dev (Grails [similar to Ruby on Rails], JavaScript, JQuery, Google Maps, etc.).

Provided tech support. Added features to an existing web application and documented them in blog entries.

For the Mobile App Configuration, created the page (JQuery and all), but the configuration functionality already existed:
