## About VCNET Total IT Solutions Company

VCNET Total IT Solutions Company is the leading Business Systems Integration Company located in heart of the city (Broadway) at Matara, Sri Lanka.

Being a registered and certified and one & only open sourced Total IT Solutions Company in Southern Province we provide expertise Linux and Windows based Solutions for our valued Clients with our vastly superior experienced IT Engineering Team in any platform.

Therefore, our Solutions are 100% accurate, reliable and highly Secured.

Working in partnership with VCNET Total IT Solutions Company, your organization would be able to achieve business goals linked with modern Information Technologies, and your Clients would feel the quality of your services that are bound with our powerful business Solutions for our best possible rates.

## About IT Services

We extend our Total IT Solutions to your Business for any of your requirements. Leave your worries behind, because we 100% assure and guarantee the highest standard of security, as we trust that our Products meets with your current or future requirements & look forward to the opportunity of serving your needs.

## How your organization would be benefitted by choosing our VCNET total IT Solutions ?

### 1. Control IT Costs

Outsourcing converts fixed IT costs into variable costs and allows you budget effectively. In other word, only pay for what you deserve when you are in needs.

### 2. Reduce Labor Costs

Recruiting and training an IT staff can be very expensive, and temporary employees don't always live up to your expectations. Outsourcing lets you focus your human resources where you need them most.

### 3. Trained, Experienced, Qualified and Certified

If you're not aware and well trained enough of IT, how would you assure an employee is to be qualified?

Certifications like Microsoft Certified Systems Engineer (MCSE) are important, but, so is experience.

- Domain Registration and Email Solutions
- Office PC Support
- Unlimited Technical Support Solutions
- Software and Web based Solutions
- Windows Based Network Solutions
- Data Recovery and Backup Solutions
- Network Monitoring Solutions
- Data Security Consultancy Service
- Linux Based Network Solutions
- System Administrations
- Employee Training
- Penetration Testing and Vulnerability Assessment

#### 4. Qualified doesn't equal with Experienced

Few problems are new for leading IT service Companies, which seems related problems multiple times. An in-house IT employee leads an isolated existence no matter how far they been trained. We'd all rather an experienced Doctors ; the same is true for IT.

#### 5. Increase Efficiency and Competitiveness

Organizations that try to do all IT Services in-house themselves can have much higher research, development, and implementation time, all of which increase costs and are ultimately passed on to Customers.

#### 6. Quickly Implement New Technology

A quality outsourced IT service organization will only have the resources to start new projects right away. Handling the same project in-house might involve weeks or months to hire the right people, train them, and to provide the support that they need. For most implementations, quality IT companies will bring years of experience in the beginning saving time and money.

#### 7. Stay Focused on Your Core Business

Businesses have limited resources, and every manager has limited time and attention. Outsourcing can help your business stay focused on your core business and not get distracted by complex IT decisions.

#### 8. Reduce risk

Every business investment carries a certain amount of risk. Markets, competition, government regulations, financial conditions, and technologies all changes very quickly. Outsourcing providers assume and manage much of this risk for you, with specific industry knowledge, especially Security and Compliance issues. They are generally much better at deciding how to avoid risk in their areas of expertise.

#### 9. Level the Playing Field

Most of small businesses can't afford to match the in-house support services that larger companies maintain. Outsourcing can help small companies act "big" by giving them access to the similar technology, and expertise that large companies enjoy. An independent third party managed cost structure and economy of scale can give your company a competitive advantage.

- Domain Registration and Email Solutions
- Office PC Support
- Unlimited Technical Support Solutions
- Software and Web based Solutions
- Windows Based Network Solutions
- Data Recovery and Backup Solutions
- Network Monitoring Solutions
- Data Security Consultancy Service
- Linux Based Network Solutions
- System Administrations
- Employee Training
- Penetration Testing and Vulnerability Assessment

## 10. Compliance and Security

Is your firewall up to date?

Do you have a DMZ installed?

Do you audit your Workstations and Servers?

Has your company implemented PCI security standards and works to maintain those standards?

For example, Businesses has many ways than ever to prosper by taking many forms of payments such as Credit and Debit Cards, Gift Certificates, E-Checks, Wire Transfers to name a few, but with these forms of transactions also comes the need for due diligence. By outsourcing a qualified Managing Services Company who is familiar with PCI Compliance standards <https://www.pcisecuritystandards.org> , you can rest assured that your Company is minimizing the risks associated with maintaining Client data, credit card numbers, sensitive competitive information and much more.

## Maintenance and Agreement
