

HOW TO COLONIZE THE SOLAR SYSTEM & BEYOND

By USI, United Space Industries & THE CSG, Church Of Saint George.

© How To Colonize The Solar System & Beyond, 2017.

Jesus the Jew !

So who were the Jews ? The Jews made up a vast kingdom in Asia, they were called the Khazars, Bulan (Khazar), was the king of these people & he converted the nation to Judaism. The Khazars, (Turkish: Hazarlar, Tatar: Xäzärlär, Hebrew: כּוּזָרִים (Kuzarim), Arabic: خزر (khazar), Russian: Хаза́ры, Persian: خزر, Greek: Χάζαροι, Latin: Gazari, Cosri/Gasani), were a semi-nomadic Turkic people who created what for its duration was the most powerful polity to emerge from the breakup of the western Turkish steppe empire, known as the Khazar Khanate or Khazaria. Astride a major artery of commerce between northern Europe and southwestern Asia, Khazaria became one of the foremost trading emporia of the medieval world, commanding the western marches of the Silk Road and played a key commercial role as a crossroad between China, the Middle East, and Kievan Rus'. For some three centuries (c. 650–965) the Khazars dominated the vast area extending from the Volga-Don steppes to the eastern Crimea and the northern Caucasus. Khazaria long served as a buffer state between the Byzantine empire and both the nomads of the northern steppes and the Umayyad empire, after serving as Byzantium's proxy against the Sasanian Persian empire. The alliance was dropped around 900. Byzantium began to encourage the Alans to attack Khazaria and weaken its hold on Crimea and the Caucasus, while seeking to obtain an entente with the rising Rus' power to the north, which it aspired to convert to Christianity. Between 965 and 969, the Kievan Rus ruler Sviatoslav I of Kiev conquered the capital Atil and destroyed the Khazar state. Beginning in the 8th century, Khazar royalty and notable segments of the aristocracy converted to Judaism; the populace appears to have been multi-confessional, a mosaic of pagan, Tengrist, Jewish, Christian and Muslim worshippers—and polyethnic. Khazar origins for, or suggestions Khazars were absorbed by many peoples, have been made regarding the Slavic Judaizing Subbotniks, the Bukharan Jews, the Muslim Kumyks, Kazakhs, the Cossacks of the Don region, the Turkic-speaking Krymchaks and their Crimean neighbours the Karaites to the Moldavian Csángós, the Mountain Jews and others. A modern theory, that the core of Ashkenazi Jewry emerged from a hypothetical Khazarian Jewish diaspora. Note in medieval times the Khazars or Jews were responsible for bringing much technology into Europe & Russia from Asia. Note the Jewish religion existed before Islam, however countries close to Kazakhstan would convert to Islam & so we can say that Islam is a even more militant version of Judaism. So The Jews were a nomadic Turkic people who's native homeland was really Kazakhstan & they believed in the old testament of the bible.

So who wrote the old testament of the bible, maybe even Moses wrote the old testament, well scholars who lived in Asia Minor, we know the New testament was written by Jesus's followers but if you want a more authoritative view of the ancient world you are better off checking out Roman, Greek or Egyptian literature & artifacts. Jesus could of probably had Egyptian ancestry or arabic ancestry & he might have also have had Caucasian ancestry. People do not generally believe Jesus to be of Nordic race but he might have had Greek or Roman ancestry & note that there is Nordic looking Greeks & there is Nordic looking Romans so it is still possible that Jesus was Nordic. Note just because Jesus was born in Judea or the so called Israel of today does not make Jesus a Jew because as mentioned above Jesus spoke against the Jews & Jesus & his followers were even fearful of the Jews. However, during Jesus's life Israel was part of the Roman empire & therefore because the Roman empires religions were based on Greek mythology, Roman mythology & Germanic mythology or Norse mythology its possible that Jesus was Nordic. Also note there were people in Israel who did not like Roman Rule & these people are regarded as the Jews of Israel who had there own beliefs, these Jews did not like paying taxes to Roman officials & Jesus preached to them. "give back to Caesar what is Caesar's, and to God what is God's. In the previous verse Jesus is saying to the Jews pay your taxes to Ceasar or the Roman officials & pay homage to the Gods, note the Gods could have meant the Egyptian Gods, Greek Gods, Roman Gods, Germanic Gods or Norse Gods, therefore its possible that Jesus was not a Jew because he told the the Jewish inhabitants to pay taxes to Roman officials or foreign officials, this makes Jesus abit of a politician, the native Jewish officials did not like Roman rule so they organized the execution of Jesus mostly on account that Jesus said "give back to Caesar what is Caesar's, and to God what is God's". So we really should call Jesus a Roman. Its also possible that Jesus was a Tyrant because he regarded himself as being the king of the Jews. In Jewish folklore or so called old testament traditions the Jews slaved themselves under Egyptian rule & to face another epoch of Tyranny slaving under Roman rule, well this could have been intolerable, this makes Jews the classic rebels, rebels against any sort of Monarchy. However we can confirm that Jesus was a Monarchist & therefore he was prone to attack in a country which was traditionally anti Monarchist & not very God fearing or in more accurate terms Atheist, for the Jews are the classic Atheists. Also note 3 out of the 4 Gospel writers had Roman or Greek background & one of them had Jewish background, this therefore concludes that Jesus had more influence preaching to Romans & Greeks, than to Jews. Just because Jesus was born in Israel doesn't mean he is a Jew for he respected the Roman rule & the Romans were Monarchists & Jesus claimed he was the king of the Jews, so Jesus should really be called a Roman, just as today we might call Jesus a European.

Here is the description of Jesus, given by Tiberius Ceasar's President to Judae, the following was written by Publius Lentulus, Tiberius Caesar's President to Judea. "There is a man in Judea who I am amazed to have witnessed, and who will now describe to you. He is a man of singular virtue. Whose name is Jesus Christ whom the barbarians esteem as a prophet, but his followers love and adore him as the offspring of the immortal God. He calls back the dead from their graves and heals all sorts of diseases with a word or a touch. He is a tall man, well shaped, and of an amiable and reverential aspect. His hair is of a color that can hardly be matched. It falls into graceful curls, waving about and very agreeably couched about his shoulders. It is parted on the crown of his head, running as a stream to the front after the fashion of the Nazarites. His forehead is high, large and imposing. His cheeks are without spot or wrinkle. His face is most beautiful with a lovely red. His nose and mouth formed with exquisite symmetry. His beard is of a color suitable to his hair, reaching below his chin and parted in the middle like a fork. His eyes are bright and blue. They are clear and innocent, dignified, manly and mature. Often times however, just before he reveals his divine powers, his eyelids are gently closed in reverential silence. In proportion of body it is most perfect and amazing to view. His arms and hands are lovely to behold. He rebukes with majesty, and counsels with mildness to who he addresses. Whether in word or deed he is eloquent and sincere. No man has seen him laugh; yet his manners are exceedingly pleasant. But he has wept frequently in the presence of men. He has temperate, modest and wise disposition; a man for his extraordinary beauty and divine perfection. He has a beauty and divine perfection, surpassing the children of men in every sense. And so Jesus was a Nordic Caucasian as opposed to the traditional dark eyed Semitic or Jewish Caucasian. So we can therefore regard Jesus as being a Nordic Caucasian who praised the Gods & who was happy under Roman rule but he was born in Israel a very long time ago.

Odin is the Prime Norse God & he is the God of War & Death as well as being the God of the Sky or the God of outer space, he is also the God of Wisdom, God of writing & God of Science.

Jesus was the Son Of God & he was a blue eyed Nordic person according to Roman historians. Jesus was more of a peaceful God who preached fables such as love thy neighbor & feed the hungry, but because of his peaceful stance he was killed by his enemies who were the Jews.

In Germanic Christianity Jesus was the Son of Odin.

The Swastika is the sacred symbol of all White people, it is the symbol of movement & racial purity.

Christians are very hospitable people & allow the worship of foreign Gods in their countries, this is why it is the duty of every Christian to build & maintain Christian churches in foreign countries as well as in Christian countries.

A new Christian denomination has begun & this Christian denomination is known as the Church of Saint George.

HOW TO GET TO HEAVEN . . .

The Church of Saint George begun in the year (666 x 3), 1998, otherwise known as the end of the fifth Sun & the beginning of the sixth Sun, for this is when our Sun began to expand into a Red Giant.

In ancient Roman religion and myth, Saturn (Latin: Saturnus) was a god of agriculture, liberation, and time. For over 13000 years he was known as the Roman God of agriculture, justice & strength, only recently was he called the Roman God of agriculture, liberation, and time, he was also called Uriel or Lucifer & many people would wrongfully call him Satan, when he was rightfully known as Saturn, The Lord Of The Rings, just like the planet Saturn, he was also known as one of the four Arch Angels, it has been said that in the year 1998 otherwise known as the year (666 x 3) he would be resurrected in human form & his spiritual father would be called Gabriel & his mother would be called Hel, Hell or Helen & he would

acquaint himself with Raphael a female Arch Angel, Gabriel a male Arch Angel & Michael another male Arch Angel, it was said that 1998 otherwise known as the year (666 x 3) would also be known as the end of the fifth sun & the beginning of the sixth sun, for this was when the Sun began to expand into a Red Giant, thus humanity has less than a billion years to evacuate planet earth & hopefully make a home on planet Mars for many billions of years or others places in our solar system & in foreign solar systems could be possible safe havens as well.

I'm the Arch Angel Lucifer . . . Otherwise known as Saint George & the Arch Angel Gabriel blew his trumpet in the year (666 x 3), 1998, otherwise known as the end of the fifth Sun & the beginning of the sixth Sun, for this is when our Sun began to expand into a Red Giant.

I was friends with the Arch Angel Gabriel, Michael & Raphael & my mothers name was Helen & she was Queen of the Hells Angels . . .

There were 4 Arch Angels, Gabriel, Michael, Lucifer & Raphael. Gabriel, Michael & Lucifer were boys & Raphael was a Girl, all four people are still alive today in the year 2015.

Note Lucifer who was also known as Georgie Porgie, otherwise known as Saint George & he has written a public declaration otherwise known as the final judgement for humanity & he also will be releasing a series of Gospels & a computer operating system very soon for he is the public relations officer of the other three Arch Angels & is responsible for distributing the final judgement for humanity.

ASA, Australian Space Agency was formed in September the 11th in 2011 & AUSI, Australien universal Space Industries was formed in the 1980s after meetings at Area 51 in the Nevada desert in The United States Of America in the early 1970's, these meetings occurred before the filming of the Star Wars movie in 1977 by American director George Lucas, who also was a close associate of George Miller who was a famous Australian movie director & George Miller was a friend of my grandmother, both these Georges also had close ties with George Bush president of North America & his son George Bush junior who also became president of North America & George Bush junior speared a misguided war into the Middle East after the destruction of the Pentagon & the World Trade Centre. The Pentagon being the central Government building of North America or as we say in Australia the Parliament house in Canberra, the buildings were destroyed by Militant members of the Nations of Islam & these buildings were the central sacred homelands of Freemasonry, otherwise known as the Knights Templar who pledged their allegiance to Saint George, Saint George was a Christian Saint who would appear in the future to save Humanity from burning in Hell, all of the above people had association with myself.

There was close co-operation between ASA Australian Space Agency & AUSI, Australien universal Space Industries, but their has also been conflict as there is any group. A aircraft hanger in Bankstown airport in Sydney was used for a period of time in the 1980's & 1990's as the central office of AUSI & it was hoped that Bankstown airport would eventually be transformed into a spaceport where spaceships could take off into outer space, it was also hoped that a space elevator or space syringe could also be built in Bankstown airport so as to suck up a slurry of superfluid/ferrofluid into outer space for outer space spacecraft construction, so as to eventually assemble & transform the International Space Station into the death star space station from the Star Wars saga. This space station was called the death star because in a billion years time life on planet earth will be practically impossible. It was later decided that a large number of Space Elevators, now known as Space Syringes would be built along the equator of planet Earth, approx 200,000 or 400,000 of them. Planet Mars & the Earths Moon will also have Space Elevators or Space Syringes. There is little public support for ASA, Australian Space Agency,

Saint George Raises the Flag.

Saint George Raises the Flag & Arch Angel Gabriel has been resurrected & has blown his Trumpet.

CLIMATE CHANGE IS A HOAX.

Humanity has to implement certain strategies now to prevent humanities extinction. If certain strategies are not implemented now humanity will become extinct in the future, let us start to implement the right strategies now to prevent humanities extinction.

LOST...SPACESHIP...

The Final Judgement . . .

Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow & incinerate this planet in approx 8 billion years.

Dear LORD Legend Of Red Dragon.

Dear LORD Legend Of Red Dragon.

1998 was the year (666x3), otherwise known as the end of the Fifth Sun & the beginning of the Sixth Sun, this is when the Sun began to expand into a Red Giant.

Humanity has to implement certain strategies now to prevent humanities extinction.

We will be sending robotic spacecraft to approx 2000 planets & hundreds of moons, these robotic spacecraft will construct habitats for humans, plants & animals.

Humanity will colonize the approx 2000 planets & hundreds of moons that have been discovered.

Understanding modern concentration camps.

The bright eyed Aryan Caucasian peoples have a rich history in regards to working with the land & producing food, small villages & towns are devoted to caring for animals & crops in their surrounding rural lands. Rural technology has been traditionally handed down from parents to children, however utilizing computers & smartphones to share knowledge is becoming the way of the future but this information is being encrypted to protect rural security.

The industrial world, manufacturing industries, mining & energy sector, universities, urban worlds & citadels, patent offices, militaries & governments hoard their research & technology & do not openly disclose it to the public & this is why we need encrypted rural technology.

[1] Today corporations operate in many nations, they are called multinational corporations.

[2] Universities Hoard thesis's & dissertation's & sell them to the highest bidder & the buyers of these thesis's & dissertation's are usually corporations.

[3] Patent law protects monopolies by not openly disclosing intellectual property to the general public.

[4] National Governments have thus become impotent neglecting the basic human rights of its tenants & citizens. The suffering of public housing tenants.

<http://indymedia.org.au/2014/05/05/the-suffering-of-a-public-housing-tenant>

[5] Mental health is governed by multinational pharmaceutical companies & anyone who refuses to work for a corporation is drugged to death for their entire natural lives.

Thus we are just beginning to see world corporate government, where everybody on planet earth is under the authority of multinational corporations.

So you see the non rural sectors do not disclose their technology so why should the rural sector disclose their technology.

Food is not a luxury & people should receive food under certain terms & conditions, the main reason for this is the fore coming fate of the earth.

Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow up & incinerate this planet in approx 8 billion years. It has been said that we can live on mars for many billions of years & many of the 2000 planets & many hundred of moons that have been discovered can also serve as human habitats.

AUSI, Australien Universal Space Industries has the technology to take humanity to other worlds & AUSI thus propose that every corporation & business in the world sell their operations to AUSI, Australien Universal Space Industries, AUSI, Australien Universal Space Industries hopes to employ everybody on planet earth & AUSI, Australien Universal Space Industries will be eventually made up of countless subsidiaries, AUSI, Australien Universal Space Industries developed the original engine to the first indymedia site in the world & was on friendly terms with the founder of wikileaks, thus AUSI, Australien Universal Space Industries believes in disclosure, opensource technology, human rights & business ethics, now is the time to spread the word & enlist the support of everybody on planet earth, now is the time for all of humanity to join up with AUSI, Australien Universal Space Industries. AUSI also supports encrypted rural technology for rural security or arcadian security.

There's nothing to inherit, all the lands have been claimed & in all respect, Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow up & incinerate this planet in approx 8 billion years time. It has been said that we can live on mars for many billions of years & many of the 2000 planets & many hundred of moons that have been discovered can also serve as human habitats.

The Concentration Camps Of The Future . . .

Many more jobs will be done by robots all over the world, not only in industrial areas, cities & towns, but also in rural areas, on the oceans, in transport & even in space on asteroids, space stations, foreign planets & moons. What will humans do when robots will do so many things ? Well humans will design & build spacecraft.

The Concentration Camps Of The Future will be when people will live, die, be born & travel on these spacecraft to the approx 2000 foreign planets & many moons that have been discovered.

What does IMMASOM mean ?

IMMASOM means Intuanuan March Magnificently As Systematic Operational Manichee. The Intuanuan acknowledge that Gabriel's Lucifer was resurrected in the year $(666 \times 3) 1998$, otherwise known as the end of the fifth Sun & the beginning of the Sixth Sun. Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow up & incinerate this planet in approx 8 billion years time. It has been said that we can live on mars for many billions of years & many of the 2000 planets & many hundred of moons that have been discovered can also serve as human habitats.

All of humanity must work with (RRES), Robots, Renewable Energy & Spacecraft.

How to facilitate construction of a fleet of starships.

Robotics will become ever more present not only in manufacturing & industrial applications but also in rural applications, this will free up time for humanity to concentrate on the construction of starships.

The main problem we have in regards to colonizing other planets & moons is getting out of the earth's gravity well, this requires a lot of power, once we are in orbit it's plain sailing to get to other planets & moons.

Once we land on another planet or moon robots can extract elements & compounds from the surface of the planet or moon & elements & compounds can be extracted from the atmosphere of the planet or moon, if there is an atmosphere! Once the elements & compounds are extracted by robots they can be used to create human life support systems & human habitats & ecosystems on the targeted colonial planet or moon.

Note alot of other planets or moons don't have a magnetosphere or the same atmospheric pressure as earth so we probably will have to live underground under many metres of rubble so as to protect us from radiation & simulate the same atmospheric pressure planet earth has.

However as said previously the main problem we have in regards to colonizing other planets & moons is getting out of the earths gravity well, this requires alot of power, once we are in orbit its plain sailing to get to other planets & moons. Can we escape the earths gravity well ? Yes we can if we concentrate on the following method. And note this method of propulsion requires urgent attention from everybody on planet earth. Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow up & incinerate this planet in approx 8 billion years time. It has been said that we can live on mars for many billions of years & many of the 2000 planets & many hundred of moons that have been discovered can also serve as human habitats. So far we have discovered approx 2000 planets & hundreds of moons & it is possible for humanity to live on these many planets & moons. We have the technology to live on these planets & moons & create our very own ecosystems just like how we live on earth, we have the technology to migrate out into the cosmos, but firstly we have to get everybody on planet earth working towards the same goal, that goal of cause is outer space colonization & we have to learn to start to apply the technology we have developed. As long as their is capitalism humanity will eventually become extinct because capitalism usually caters for individual wants & needs & not community wants & needs or global wants & needs, unless of cause companies like AUSI, Australien Universal Space Industries buy up all of the companies & business's on planet earth. Religion is faulty unless of cause their is a space theocracy being a international religious government which sets relevant standards for humanity so as humanity can colonize other worlds, a international space theocratic religion has already been established & this is called IMMASOM, Intuanuan March Magnificently As Systematic Operational Manichee. We got to think of the planet as being one company, one organization, one body, all working towards the goal to colonize other worlds. We got to think of outer space colonization as being a grassroots organization.

<http://www.icarusinterstellar.org/organizations/>

Build spaceships, not cars, we want to live on Mars ! As the Mars Society often says.

What our dwellings will be like on the Moon & Mars !

The moon has a lot of water. The moon is estimated to contain at least 33 billion litres of water, the water consists of millions of frozen droplets mixed with dirt. Planet Mars has a lot of groundwater, enough to cover planet Mars with 1 Metre of water. A moon near Saturn has an underground ocean. Note you can also make water from compounds of hydrides or hydrogen & oxygen. Martian & Lunar domed towns will have halls under 27 m of rubble to provide atmospheric pressure and radiation shielding, with light tubes, concentrating mirrors like solar thermal power heliostats or Fresnel lens to concentrate & then diffuse light to humans, plants & animals.

What will we be taking with us to other planets & moons ?

We will take with us people, plant seeds, plants, animals, possibly elements or compounds maybe in a compressed form & sophisticated robots which will create habitats for people, plants & animals. The surface of the planet will have robotic factories & countless heliostats which create solar energy & also funnel light underground via solar power towers, other heliostats, Fresnel lens & light tubes. There will also be solar cells, maybe wind towers & nuclear reactors on the surface of the planet or moon. Note a lot of other planets or moons don't have a magnetosphere or the same atmospheric pressure as Earth so we probably will have to live underground under many metres of rubble so as to protect us from radiation & simulate the same atmospheric pressure planet Earth has.

So how do we get out of the earths gravity well ?

We beam city sized spacecraft into orbit . . .

In order to beam city sized spacecraft into orbit by using lasers or masers you will need alot of renewable energy . . .

Biofuel
Biomass
Geothermal
Hydroelectricity
Solar energy
Tidal power
Wave power
Wind power
Osmotic power
Marine current power
Ocean thermal energy conversion
Hydrogen extracted from the oceans

In order to develop the renewable energy infrastructure & renewable energy technologies you will have to use robotics, this is called RREIC Robotic Renewable Energy Infrastructure Construction. Swarms of self replicating robotic machines can use technologies like google earth to travel all over the continents constructing Renewable Energy Infrastructure both on land & at sea.

Robotic Biofuel cultivators . . .
Robotic Biomass cultivators . . .
Robotic Geothermal energy infrastructure construction . . .
Hydroelectricity expanded using robotic construction methods . . .
Robotic Solar energy infrastructure construction . . .
Robotic Tidal power infrastructure construction . . .
Robotic Wave power infrastructure construction . . .
Robotic Wind power infrastructure construction . . .
Robotic Osmotic power infrastructure construction . . .
Robotic Marine current power infrastructure construction . . .
Robotic Ocean thermal energy conversion infrastructure construction . . .
Robotic Hydrogen extraction from the oceans . . .

Australian desert to be converted into a solar thermal power station . . .

The Australian desert has enormous renewable energy potential & AUSI, Australian Universal Space Industries is working with the Gemasolar Thermosolar Plant in Spain to initiate their solar thermal power & heliostat technology in Australia's deserts. It looks like the road rail vehicle will become a reality.

The world's deserts can power the planet with electricity & hydrogen.

<http://cleantechnica.com/2013/08/02/radically-new-technique-to-produce-hydrogen-fuel-from-water-developed/>

Our first pilot project will be to convert the Australian desert into a solar furnace using swarm robotics, heliostats & solar power towers that use molten salt technology. That way solar thermal power can produce electricity & extract hydrogen from water.

City sized spacecraft can then be beamed into orbit by using laser beams or maser beams powered by renewable energy, once the city sized spacecraft are in orbit they can begin to travel to other planets & moons by using solar sails or other propulsion systems, its plain sailing once in orbit.

Space manufacturing requires building generation ships which have the potential to sustain between 150 people to 40,000 people for many hundreds or thousands of years. Such ships will have to produce their own food in space, this may require fresnel lens, aquaponics & mirrors & light tubes as well as artificial lighting. All resources & water would have to be recycled. The ships would be very large & they will probably be built using space elevators, space fountains or launch loops & hydrogen rockets. A network of supply ships must also follow the generation ships, these supply ships will take off from planets, moons, asteroids & rogue planets where they will refurbish & resupply from these planets, moons, asteroids & rogue planets special habitats. Each generation ship or supply ship should carry a

number of lifeforms from earth with it so that these lifeforms can reproduce on the mission & on a colonial planet, moon, asteroid or rogue planet. Traveling in front of the generation ships & supply ships will be robotic spacecraft, these robotic spacecraft will build & manage human habitats on planets, moons, asteroids & rogue planets, that way supply ships & generation ships can resupply thanks to the robotic spacecrafts missions to build habitats on the colonial planets, moons, asteroids or rogue planets. Robotic spacecraft will also build space habitats, these space habitats will be like pit stops for generation ships & supply ships & thus resupply long missions between colonial planets, moons, asteroids or rogue planets.

Lasers can also simulate a magnetic field in a BEC, Bose–Einstein condensate, this is ideal for space fountain construction, this could even be a better option than building space elevators with carbon nanotubes all along the equator. Launch loops also show alot of potential. Now is the time for all of humanity to work towards the great expulsion.

<https://soundcloud.com/mantra-1-1>

AUSI, Australien Universal Space Industries wants to build alot of space fountains all over the world.

AUSI, Australien Universal Space Industries wants to build approx 100,000 to 200,000 space elevators all along the equator.

AUSI, Australien Universal Space Industries wants to build alot of launch loops.

The Launch Loop is an earth to high orbit launch system, based on momentum and energy storage in a long (5600km diameter) and narrow (5 cm) hypervelocity (14km/s) iron rotor. The Launch Loop is powered and deployed from the ground, protected from space debris by the upper atmosphere, can launch thousands of tons per day to high orbit, and can be built with existing engineering materials.

Non rocket space launch is like a rail road into space, a way of sending more materials into space than rockets can. Yes hydrogen based rockets show alot of potential as well, but perhaps non rocket space launch will be the way to go in the future because we already have the main infrastructure in place like the electric grid. We can send materials or objects into orbit & then collect them in space, such will open up a new epoch of space manufacturing where spacecraft or space tankers are manufactured in space from materials sent into orbit thanks to non rocket space launch. Wikipedia has a good article on Non rocket space launch & a good book called “Non-Rocket Space Launch and Flight” is worth the read. Some examples of non-rocket space launch is the space elevator, launch loop, space fountain, mass driver & beam-powered propulsion.

More about non-rocket spacelaunch here . . . <http://vixra.org/pdf/1407.0174v1.pdf>

More about non-rocket spacelaunch here . . . http://en.wikipedia.org/wiki/Non-rocket_spacelaunch

Hydrogen rockets also show alot of potential.

Seeing all the oceans are going to boil away in a billion years time, we may as well use the oceans to make hydrogen rockets. Hydrogen is a abundant resource on planet earth because all of the water like the oceans is made up of hydrogen & hydrogen can be extracted from water. Even when you launch a hydrogen rocket all of the hydrogen is converted back to water vapor from the exhaust plume. Because of the abundance of hydrogen on earth what is really needed is Robotic Hydrogen Rocket Launch Infrastructure Construction. Yes robotics used to build & launch hydrogen rockets. Of cause to expand the launching of hydrogen rockets we have to make more hydrogen & this can be tricky & that's why

many people say non-rocket space launch is the way to go because we already have the basic infrastructure in place like the electric grid. Note the above methods are for sending massive amounts of people, lifeforms & infrastructure out of the earth's gravity well using all of the renewable energy potential of planet earth, once in orbit gravity assist can sling the starships or spacecraft toward Mars or other planets & moons in our solar system or foreign solar systems. It all depends on what propulsion systems we use to determine how long it will take to reach our destinations, anti matter rockets & nuclear propulsion look promising as does the bussard ramjet , nuclear photonic rocket & beamed propulsion also looks promising. But ion thruster's, solar sails & magnetic sails could mean it will take a bit longer to reach our destinations. Note the further away a planet or moon is the longer it will take to get there. Self sufficient generation ships will probably have to be constructed & these generation ships will carry enough resources & lifeforms to sustain populations between 150 to 40,000 people for hundreds to thousands of years.

Now is the time for all of humanity to work towards the great expulsion.

AUSI, AUSI, AUSI, Australien Universal Space Industries . . .

IMMASOM, Intuanuan March Magnificently As Systematic Operational Manichee.

The Hollow Moon

The learned ancients & modern scientists knew the moon had no volcanic activity, therefore it was assumed that the moon was hollow. Now we know that the moon is not hollow, however it has a stable & cool interior unlike the Earth or Mars which both have molten interiors made up of lava.

Planet earth has a magnetosphere, otherwise known as a magnetic North & South pole & this protects planet earth from cosmic radiation & thus makes life possible on planet earth.

Note a lot of other planets or moons don't have a magnetosphere or the same atmospheric pressure as earth so people will have to live underground on these celestial bodies under many meters of rubble so as to protect them from cosmic radiation & simulate the same atmospheric pressure planet earth has. And so it has been proposed for many decades now that humanity can also live underground on the hollowed Moon.

Remember the science fiction Star Wars Books & the Star Wars movie by the honorable George Lucas, well they talked about hollowing out the moon & mining the moon to produce a very large space station that can travel through space just like a spacecraft, it was called the Death Star, otherwise known as the hollowed Moon. What used to look like the moon is now transformed into one super spaceport & very large space station that can travel through space just like a spacecraft, the Death Star, otherwise known as the hollowed Moon.

The interior of the Death Star or hollowed Moon resembles a onion, with many torus's acting as floors, these torus's could also spin creating artificial gravity.

So humanities key to colonize the solar system or colonize foreign solar systems will no doubt depend on making the moon hollow & transforming it into a super spaceport & very large space station that can travel through space just like a spacecraft, otherwise known as the Death Star or hollow Moon.

The moon is estimated to contain at least 33 billion litres of water, the water consists of millions of frozen droplets mixed with dirt.

Lets Go to the Moon & hollow it out & mine it & process it & transform the Moon into something wonderful. We can use hydrogen rockets or non- rocket space launch to go the Moon.

LOST SPACESHIP <http://www.google.com/moon/>

Because the Moon does not have a magnetosphere or atmosphere & clouds it receives more solar power than the earth does, so not only will there be plenty of solar power available on the Moon, this power could also be beamed back to earth & if a majority of the solar power collected on the Moon was beamed into space its even possible that the Moon will move & travel through space leaving its orbit around the earth & thus the Moon becomes a spacecraft.

The Moon has all of the elements & compounds to support life, its simply a matter of using robotic machines to extract & process these elements & compounds from the lunar rock. Also the Moon is a lot closer to earth than Mars is so lets go to the Moon.

There is 181 moons in our solar system & the majority of these moons can accommodate lunar bases & eventually swarm robotics will convert these moons into space stations or spacecraft.

Robotic planet killers can transform the planet into a death star

Robotic planet killers are robotic machines which mine & process entire planets, moons or asteroids, these robotic machines transform the entire planet into fleets of spacecraft which can travel on long missions to other planets, moons or asteroids. Remember our expanding Sun will incinerate this planet into oblivion in approx 8 billion years time, thats why we must unleash robotic planet killers upon this

planet so as to mine & process this planet & thus transforming the entire planet into fleets of spacecraft which can travel on long missions to the approx 2000 planets, many moons or asteroids that have been discovered. We can cool the interior of the planet by pumping & circulating the all of the air & water underground, geothermal energy will also help cool the interior of the planet, this will make it easier to transform planet earth into a interlocked metallic death star like space station made up of many smaller spacecraft all interconnected & stationary. The stationary spacecraft will remain on the now transformed (planet earth death star space station), all waiting to be separated from each other & take off into outer space like lego which is separated. The entire planet transformed into a interconnected fleet of metallic stationary spacecraft, ready to take off at a moments notice. We can use mirrors to tunnel sunlight to the many underground torus onion floors of the interconnected stationary death like space station which was once known as planet earth. Basically Evolutionary Swarm Robotics are used to mine & process all of the resources found in planets or moons or other celestial bodies, this planet will eventually be destroyed & swallowed up by the expansion of the Sun, so we say to ourselves we shall not let the Sun play God upon our planet, we instead will decide the fate of this planet & it is possible for Evolutionary Swarm Robotics to mine, process & destroy this planet all while creating new habitats for humanity to exist either in this solar system or in foreign solar systems.

Planet earth is a metallic planet

Planet earth is mostly a bubble full of iron & other metals & of cause other elements, now we now that iron rusts on the surface of the earth, however it takes billions or maybe even trillions of years for iron based metals to rust in outer space & alloys are even more durable in outer space, thus the iron of the earth & the other metals will no doubt make very good spaceships & will serve as containers to hold all of the other elements of earth & lifeforms like ourselves & the other lifeforms on planet earth, the problem is mining & manufacturing the metals or alloys ? Enormous self replicating robotic machines will most likely do the job & the mined material will be converted could be converted into a superfluid/ferrofluid or maybe even a gas, this superfluid/ferrofluid or gas will then be pumped into outer space via space syringes or space elevators which will be built all along the equator, space fountains or launch loops could be built anywhere & they also can transport materials into outer space like the space elevators or hydrogen rockets. The metals will then be extracted from the superfluid/ferrofluid or gas that will be sent into orbit via the space syringes or space elevators, space fountains, launch loops & hydrogen rockets, these metals will be turned into alloys in outer space & thus spaceships, space stations, space habitats or death star like space stations will then be constructed in space, the death star is spherical & the interior of the death star looks like a onion cut in half with rotating torus's inside creating artificial gravity, the death star can orbit other celestial bodies or travel through space, it is debateable whether the death star should be very large or it should be small & many of them, that way if one death star fails their are others which can still operate. Remember the space station was called the death star because planet earth will be incinerated into oblivion & destroyed in approx 8 billion years time due to the Sun turning into a Red Giant, in approx 1 billion years time all life will be destroyed because of the resulting global warming due to the sun expanding into a red giant, some say we might be able to still live on earth for approx 7 billion years, but we will have to live deep underground & at least half of the air & water will have to be pumped deep underground, the remaining half of the water & air of planet earth could be pumped into outer space via the space syringes or space elevators which will be built all along the equator, (space fountains & launch loops could be built anywhere & hydrogen rockets could be launched from anywhere, this air & water transported into outer space will then be used in space habitats, spaceships, spacecraft or space tankers. Spaceships can then establish colonies on foreign celestial bodies & use nanobots which swarm into megabots to create human habitats for these colonies.

Instead of waging war & mental health advocates drugging to death one third of the world's population due to sustainability issues, send one third of the worlds population to foreign planets & moons.

Join up with AUSI, Australien Universal Space Industries . . .

AUSI, Australien Universal Space Industries would like to see a international cessation of the use of uranium & even thorium because these sorts of materials should be used for outer space colonization research. Instead of adopting nuclear energy AUSI, Australien Universal Space Industries would like to see the world develop renewable energy.

- Robotic Biofuel cultivators . . .
- Robotic Biomass cultivators . . .
- Robotic Geothermal energy infrastructure construction . . .
- Hydroelectricity expanded using robotic construction methods . . .

- Robotic Marine current power infrastructure construction . . .
- Robotic Ocean thermal energy conversion infrastructure construction . . .
- Robotic Hydrogen extraction from the oceans . . .

Would You Please Consider A Job In Renewable Energy . . .

Entire planet can be transformed into a interconnected grid of stationary spacecraft similar to the death star . . .

Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star. In the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will eventually expand into a Red Giant & swallow up & incinerate this planet into oblivion in approx 8 billion years time.

So far we have discovered approx 2000 planets & hundreds of moons & it is possible for humanity to live on these many planets & moons. We have the technology to live on these planets & moons & create our very own ecosystems just like how we live on earth, we have the technology to migrate out into the cosmos, but firstly we have to get everybody on planet earth working towards the same goal, that goal of cause is outerspace colonization & we have to learn to start to apply the technology we have developed.

Entire planet can be transformed into a interconnected grid of stationary spacecraft similar to the death star . . .

Evolutionary Swarm Robotics . . .

Evolutionary Swarm Robotics is a concept where intelligent machines swarm & reproduce on mass & they are used to mine & process entire celestial bodies, usually planets or moons. Evolutionary Swarm Robotics can be used in conjunction with space elevators, space syringes, launch loops, space fountains, beam powered propulsion & hydrogen rockets by converting the planet or moon into a superfluid/ferrofluid or maybe a gas & then transporting this fluid into outerspace, this fluid is then used to construct fleets of massive space habitats & spacecraft in space

<http://www.youtube.com/watch?v=YQIMGV5vtd4>

The outcome of such massive industrial process's using swarm robotics is a finally produced array of sophisticated spacecraft which serve as habitats for humanity, like a fleet of massive spaceships seen in science fiction movies.

The timescale of such activities depends upon what is programmed into the machines, for eg: Our star, the sun, was born in the heavens about 4.5 billion years ago. Our sun is about 1/3 of the way through its expected life. Scientists are now predicting the following events during the remaining life of our star, in the next 1.1 billion years, its brightness will increase by 10%. This will super-heat our planet as a result of a severe greenhouse effect. All of the oceans on earth will boil away and all life will be destroyed. The Sun will expand into a Red Giant & swallow & incinerate this planet into oblivion in approx 8 billion years time.

Therefore we can debate on the fact that we have 1 billion years to evacuate the planet & so we may have enough time to initiate & run evolutionary swarm robotics upon this planet, so as to create fleets of spacecraft which can orbit celestial bodies or travel through space.

Basically Evolutionary Swarm Robotics are used to mine & process all of the resources found in planets or moons or other celestial bodies, this planet will eventually be destroyed & swallowed up by the expansion of the Sun, so we say to ourselves we shall not let the Sun play God upon our planet, we instead will decide the fate of this planet & it is possible for Evolutionary Swarm Robotics to mine, process & destroy this planet all while creating new habitats for humanity to exist either in this solar system or in foreign solar systems.

Evolutionary swarm robotics basics . . .

In days gone by & still in these days & hopefully for many years into the future the demoscene has stamped its way into computer immortality. Using complex discrete mathematics computer programmers are able to push the limits of computational power & produce awe inspiring display hacks.

<https://itunes.apple.com/us/app/demoscene-tv/id347046191?mt=8>

What started out as a bit of tinkering with computers by enthusiasts & hobbyists resulted in attaining government & corporate sponsorship, however as government & corporate sponsorship reduced the creativity of the demoscene ?

The demoscene was around before youtube or googlevid & even the internet.

What makes the Demoscene stand out from the rest is that computer generated music was blended with computer generated graphics. Three types of ppl make a demo work.

- [1] coders
- [2] graphicicians
- [3] musicians

<http://www.youtube.com/watch?v=DcKR0OuQCG4>

And these days many old demo group groupies now work with mathematicians, data miners, scientists & engineers to create EEA Exploratory Engineering Applications . . .

The Magical Seven These Days Comprise Of . . .

- [1] coders
- [2] graphicicians
- [3] musicians
- [4] mathematicians
- [5] data miners
- [6] scientists
- [7] engineers

EEA Exploratory Engineering Applications are still esoteric but do provide humanity a possible alternative reality apart from the traditional highway to hell.

<http://www.youtube.com/watch?v=b3GUfM7qkCw>

Entire planet can be transformed into a interconnected grid of stationary spacecraft similar to the death star . . .

Its possible that the interior of the Death Star could resemble a onion, with many torus's acting as floors, these torus's spin creating artificial gravity.

The interior of the Death Star resembles a onion, with many torus's acting as floors, these torus's spin creating artificial gravity.

The interior of the Death Star resembles a onion, with many torus's acting as floors, these torus's spin creating artificial gravity.

Inertial confinement nuclear fusion torus . . .

The above picture is a inertial confinement nuclear fusion Torus, did you know countless Torus's were designed & distributed on computers all round the world on homegrown pascal based star trek orientated zmodem capable BBS Bulletin Board Systems, this was a time when the gif file had not even been invented yet & their were WHQ, World Head Quarters & HQ Head Quarters, instead of your .coms which are present on the mainframe linux internet computer servers & clients of today. We still rely on the Suns life giving powers but we are now artificially producing the same energy systems which the Sun produces itself with devices which look like torus's, this is known as nuclear fusion.

We can cool the interior of the planet by pumping & circulating all of the air & water underground, geothermal energy will also help cool the interior of the planet, this will make it easier to transform planet earth into a interlocked metallic death star like space station made up of many smaller spacecraft all interconnected & stationary. The stationary spacecraft will remain on the now transformed (planet earth death star space station), all waiting to be separated from each other & take off into outerspace like lego which is separated. The entire planet transformed into a interconnected fleet of metallic stationary spacecraft, ready to take off at a moments notice. We can use mirrors to tunnel sunlight to the many underground torus onion floors of the interconnected stationary death like space station which was once known as planet earth.

A city suburb or town will be one spacecraft, interconnected to the remaining death star like space station . . .

A city suburb or town will be one spacecraft, interconnected to the remaining death star like space station. These spacecraft will have the potential to travel to other celestial bodies in our solar system & foreign solar systems by disconnecting themselves from each other like lego & taking off. All of the above will be made possible by unleashing evolutionary swarm robotics upon planet earth.

The death star can be covered in glass ! . . .

The death star, (once known as planet earth), does not have to be covered in steel, it can be covered in glass ! There's a lot of silica on planet earth especially in the mantle, thus when all of the water, including ocean water & atmosphere is pumped underground & we use geothermal energy as our primary energy resource, the interior of the planet will cool quickly & we can cover the surface our newly modified surface of planet earth with a sheet of very thick glass, that way we can still use sunlight & not rely on artificial lighting, we will have 24 hour sunlight when the rays of the sun pass through light tubes & mirrors all throughout the death star like space station, this could give us at least 7 billion years to play around with & after 7 billion years we will have to dislodge the interconnected grid of spacecraft capsules from the death star like space station so as to travel to other celestial bodies. Planet earth is mostly a bubble full of iron & other metals & of course other elements, now we know that iron rusts on the surface of the earth, however it takes billions or maybe even trillions of years for iron based metals to rust in outer space & alloys are even more durable in outer space, thus the iron of the earth & the other metals will no doubt make very good spaceships & will serve as containers to hold all of the other elements of earth & lifeforms like ourselves & the other lifeforms on planet earth, the problem is mining & manufacturing the metals or alloys ? Enormous self replicating robotic machines will most likely do the job

White House petition about constructing a death star . . .

In 2012, a proposal on the White House's web site urging the United States government to build a real Death Star as an economic stimulus and job creation measure gained more than 25,000 signatures, enough to qualify for an official response. The official response was released in January 2013 and noted that the cost of building a real Death Star has been estimated at \$852 quadrillion and, at current rates of steel production, would not be ready for more than 833,000 years. The response also noted that "the Administration does not support blowing up planets or destroying planets to make a super space station or fleets of spacecraft using swarm robotics".

Our primary goal now is Renewable Energy Infrastructure Construction

The following basic outline of renewable energy technology has already been put into use & note each of the following can be broken up into many forms of different technology.

Biofuel
Biomass
Geothermal
Hydroelectricity
Solar energy
Tidal power
Wave power
Wind power
Osmotic power
Marine current power
Ocean thermal energy conversion
Hydrogen extraction from the Oceans

Swarms of self replicating robotic machines can use technologies like google earth to travel all over the continents constructing Renewable Energy Infrastructure both on land & at sea.

Robotic Biofuel cultivators . . .
Robotic Biomass cultivators . . .
Robotic Geothermal energy infrastructure construction . . .
Hydroelectricity expanded using robotic construction methods . . .
Robotic Solar energy infrastructure construction . . .
Robotic Tidal power infrastructure construction . . .
Robotic Wave power infrastructure construction . . .
Robotic Wind power infrastructure construction . . .
Robotic Osmotic power infrastructure construction . . .
Robotic Marine current power infrastructure construction . . .
Robotic Ocean thermal energy conversion infrastructure construction . . .
Robotic Hydrogen extraction from the oceans . . .

Our first pilot project will be to convert the Australian desert into a solar thermal power station using swarm robotics, heliostats & solar power towers that use molten salt technology.

<http://cleantechnica.com/2013/08/02/radically-new-technique-to-produce-hydrogen-fuel-from-water-developed/>

Note all of the above is just one of our options, there may be options available to us, however if the above is proven to be our number one option then we must commence work on this project as soon as possible. See other links below for alternative options.

AUSI, Australien Universal Space Industries . . .

<https://soundcloud.com/mantra-1-1/australien-universal-space>

Remember Lucifer was a AUSI & he can save humanity from burning in hell so better still join up with AUSI, Australien Universal Space Industries. AUSI, AUSI, AUSI.[]

AUSI, Australien Universal Space Industries . . .

Humanity has to implement certain strategies now to prevent humanities extinction.

If certain strategies are not implemented now humanity will become extinct in the future, let us start to implement the right strategies now to prevent humanities extinction.

Thinking of going to another planet or moon ?

Perhaps you should travel to one of these launch sites & take off in a spacecraft . . .

Join up with AUSI, Australien Universal Space Industries.

Lets build colony ships & leave this God forsaken planet !

If we can build the International space station, then we can also build colony ships to travel to other planets & moons & leave this God forsaken planet.

The time is coming for humanity to colonize outer space.

Its amazing what robots can build, remember robots will build & manage everything in the future & humans will control & design the robots with computers & these robots will build the infrastructure needed to colonize outer space.

Robots can build spacecraft.

Remember robots will build & manage everything in the future & humans will control & design the robots with computers & these robots will build the infrastructure needed to colonize outer space.

TIME SCALE OF REVOLUTIONS

[1] The first revolution was the Agricultural Revolution, this involved land clearing & then raising animals & growing crops.

[2] The second revolution was the industrial revolution, this involved using machines to manufacture all types of goods & do many types of work.

[3] The third revolution was the renewable energy revolution, this involved using clean forms of energy that did not rely on fossil fuels or nuclear power.

Biofuel

Biomass

Geothermal

Hydroelectricity

Solar energy

Tidal power

Wave power

Wind power

Osmotic power

Marine current power

Ocean thermal energy conversion

Hydrogen from the Oceans

[4] The fourth revolution was the robotic revolution, this involved using computers, computer programs & robots to do all kinds of work all over the world.

[5] The fifth revolution was the space colonization revolution, this involved using computers, computer programs, robots, hydrogen rockets & non-rocket space launch to build infrastructure in outer space that will enable humanity to colonize other planets & moons in our solar system & possibly in foreign solar systems as well.

So you can see there is five revolutions at work. What revolution will you devote your time to ?

. . . TIME SCALE OF REVOLUTIONS . . .

Below is a list of AUSI's long term space goals . . .

[1] Expand the construction of renewable energy infrastructure all round the world.

Robotic Biofuel cultivators . . .

Robotic Biomass cultivators . . .

Robotic Geothermal energy infrastructure construction . . .

Hydroelectricity expanded using robotic construction methods . . .

Robotic Solar energy infrastructure construction . . .

Robotic Tidal power infrastructure construction . . .

Robotic Wave power infrastructure construction . . .

Robotic Wind power infrastructure construction . . .

Robotic Osmotic power infrastructure construction . . .

Robotic Marine current power infrastructure construction . . .

Robotic Ocean thermal energy conversion infrastructure construction . . .

Robotic Hydrogen extraction from the oceans . . .

[2] Build approx 200,000 to 400,000 space elevators all along the equator.

[3] Build space fountains & launch loops all over the planet.

[4] Experiment with laser or maser beam powered propulsion.

[5] Use robots to build & launch massive hydrogen rockets from all round the world.

[6] Build a large network of solar satellites, otherwise known as space based solar power stations

[7] Build massive fleets of spacecraft & space tankers along with a network of space habitats in space.

[8] Build space elevators on the moon & on Mars.

[9] Transport half of all of the air, water & soil on earth into space for use in space habitats, spacetankers & spacecraft.

[10] Transport the other remaining half of all of the air, water & soil of planet earth underground & expand geothermal energy.

[11] Cover as much of the planet as possible with sheets of thick durable tintable glass.

[12] Construct special underground habitats & above ground habitats on the earth, the moon & on Mars.

[13] Send robots to approx 1000 planets & moons that have been discovered in our milky way galaxy, these robots will explore the planets & moons & create infrastructure which will sustain humanity.

[14] Transport people, air, water, elements, compounds & lifeforms to approx 1000 planets & moons that have been discovered in our milky way galaxy.

[15] Mine, process & destroy the rest of planet earth & out of the destruction will be furnished a network of space habitats & spacecraft & space tankers, this will be achieved by utilizing swarm robotics.

Note the above works may not necessarily be done in the above mentioned order.

[EOF] End Of File . . .

Here is a picture of Saint George, otherwise known as Georgie Porgie, George Carrot, Gabriels Lucifer, aka Bindigoat. Saint George is pictured wearing glasses while riding his Dads donkey.

AUSI, AUSI, AUSI, Australien Universal Space Industries.
<http://space-technology.freeforums.net/thread/1/welcome-new-forum>

The Arch Angel Gabriel found a trumpet in the street in the year (666 x 3), 1998, otherwise known as the end of the fifth Sun & the beginning of the sixth Sun, for this was when the Sun began to expand into a Red Giant.
