

LED Signage

A Digital signage is a sure shot way to grab one's attention. The digital signage has garnered popularity for its LCD, LED and projection technologies, especially with the scrolling texts, digital images, videos that keep moving. The scrolling text you find on the public transportation -buses, trains is nothing but the digital signage.

Digital Signage can work as a technique to meet the demanding nature of humans who are always on a lookout to find something unusual rather than a common practice that they are more used to. And the blinking digital signage or the scrolling text often satisfies the inquisitive nature of the people. Images are worth thousand words, and an image on the *digital signage* far outweighs any other form of advertising.

LED signage is widely preferred for the purpose of advertisement and catchy display. They are cheap, long lasting and low energy consuming. **LED display** is an extremely effective way of making your name visible.

Raghu digitals provide all kinds of LED services that you need to light up your business. We have LED display board, electronic message board, LED display sign, LED sign outdoor, LED screen, LED sign board manufacture and LED board makers.

LEDs are tiny light bulbs. LED display is made by using LED screens where texts, pictures, and even videos can be displayed. LEDs have replaced the conventional tube light over time. LEDs are cheap and effective. They do not require much of a maintenance and even cut down a lot on power usage. And all this with the even better output.

Mentioned below are some of the advantages of LED usage

Energy efficient

LED is far more energy efficient than any other conventional lighted sign board. This is one of the main reasons for why Large *LED sign boards* are mostly preferred over fluorescent or neon lighting system.

Service life

LED was an important breakthrough in scientific advancements related to lighting technologies. LEDs are estimated to function for 4-5 years with 8 hours of function per day.

Structural advantage

Like our traditional light bulbs or sodium lights, LED does not have a filament. LEDs are called solid state light. This feature makes it much safer and easier to transport, while most other lights require special packing during transportation.

Instant lighting

LEDs do not require any warm-up time. The very principle LED works on allows it to light up to its prime in nanoseconds.

Weatherproof

LEDs have proven their loyalty even in, more or less, extreme weather conditions. They function in sub-zero weather conditions and have been found to work well and good when put up outdoor in hot summer days. It is waterproof and reduces the risk of fire and shock hazards.

Lively colors

LEDs come in all variety of colors which do not wash out over time. The lively look of LED makes it very desirable for display ads.

Eco-friendly

LEDs do not contain or release any hazardous chemical substance. It even cuts down on electricity consumption in comparison to other types of light.

Flexible

The brightness and color of LEDs can be adjusted according to one's preference.

No wonder why LED display has gained popularity so quickly. It has become the perfect choice for display advertisement for its unmatched qualities. And major researchers and investments are done into this technology to make it even brighter for everyone.
