PROJECTS

On A Budget Furniture — *Prestashop*

Early project built on the popular ecommerce CMS, Prestashop., implemented with custom features on the backend

Golden Wave Properties — *Wordpress*

Custom job on Wordpress which runs two different themes for different pages of the website, along with a custom plugin to fetch JSON data and convert them into listed properties on the website. Also implemented cron job management to handle recurring properties

Aerofoam File Repository — *PHP*

A complete file storage and secure file sharing solution designed for internal use by RHIRA group of companies

MyGlamm — *Wordpress*

Custom job on Wordpress with a custom booking system in place, apart from various optimizations and tweaks that ranks it on Google as the first website for Beauty Services at Home

Real Time Statistics Dashboard — *NodeJS (Express JS), Socket.io*

Developed backend tools and API's for the real time dashboard using a socket based communication system, using Socket.io, Node and MongoDB

Genesis (Query Explorer/API Manager) — *NodeJS (Sails) and React JS*

Internal project which involved creating a SQL Workbench which can save API's on the fly from SQL queries. API's can then be run as cron job's for sending report data in mail or even as POST data to an URL

Natural Language SQL Parser — *NodeJS and React JS*

SQL Parser which can convert or rather, help any user construct a natural language query and gets results for the same from a connected database

iService — *React JS*

React JS frontend for an exclusive repair chain; currently under development but partially functional
