

...quick guide about using MapCraft tool in Ilam Project:
(<http://mapcraft.nanodesu.ru/pie/651>)

The image consists of three vertically stacked screenshots of the MapCraft web application interface, illustrating the steps to acquire a slice in a mapping project.

1. ...click on slice you want to acquire
The first screenshot shows a map of a region with a grid overlay. A specific slice is highlighted in yellow. A black arrow points to this slice with the text "1. ...click on slice you want to acquire". The interface includes a top menu with "Cake", "Settings", "Info", and "Admin". A "Properties: 60" panel on the right shows "Owner: None", "Progress: 0/9", and "Comments: 0/9". A "Chat" window at the bottom left shows messages from "AshokIntern".

2. ...click on 'owner' button and confirm "Yes" on messagebox..
The second screenshot shows the same map. A "Taking" dialog box is open in the center, asking "Are you sure you want to take this slice?" with "Yes" and "No" buttons. A black arrow points to the "Owner" button in the "Properties: 60" panel on the right. The "Owner" field now shows "WojtekK".

3. ...now you're owner of previously selected slice, in properties panel you can also change progress of your job, and release ownership if mapping is complete
The third screenshot shows the map with the slice still highlighted. A black arrow points to the "Progress" field in the "Properties: 60" panel, which now shows "0/9". The "Owner" field remains "WojtekK". The "Comments" field now contains the text "WojtekK Slice been". The "Chat" window at the bottom left shows a new message: "K has reserved slice #60".
