

Physical shared custody be the default for children of separated parents

In the event of divorce or separation, children often become the stakes of a marital conflict that does not belong to them. Yet depriving a child of the possibility of seeing one of the parents or minimizing access rights to one of the parents causes psychological maltreatment. **Bill S-202 on divorce (parenting plans) does not address the principle of physical shared custody by default.** A missed opportunity to recognize and value the role of each parent in their child(ren).
