

## **Greetings from AUSI, Australien Universal Space Industries.**

AUSI, Australien Universal Space Industries has been operating in Australia, Europe & the United States for 47 years. We have outlined a new direction for the global space race. We see possibilities to establish colonies on a lot of celestial bodies in our solar system, we also see opportunities to make long voyages to foreign solar systems.

We need to harness the worlds energy resources for space manufacturing. If we can build the international space station, then we can build colony ships in space to establish colonies on the Moon & Mars.

### **However renewable energy is our primary goal right now.**

Robotic Biofuel cultivators.

Robotic Biomass cultivators..

Robotic Geothermal energy infrastructure construction.

Hydroelectricity expanded using robotic construction methods.

Robotic Solar energy infrastructure construction.

Robotic Tidal power infrastructure construction.

Robotic Wave power infrastructure construction.

Robotic Wind power infrastructure construction.

Robotic Osmotic power infrastructure construction.

Robotic Marine current power infrastructure construction.

Robotic Ocean thermal energy conversion infrastructure construction.

Robotic Hydrogen extraction from the oceans.

AUSI is the number one authority on robotics in Australia & we can use robotics to speed up the construction of renewable energy infrastructure all round the world.

### **How To End Dependence On Fossil Fuels & Nuclear Power ?**

#### **Worlds deserts can power the planet.**

Many advances have been made in robotics, swarm robotics & GPS, Global Positioning System, take note of technologies like Google earth. With the above technologies its possible that robotic drones can construct solar thermal power plants all over the worlds deserts, this will produce enough electricity & hydrogen fuel to power the world & thus end our dependence on oil, coal, gas & nuclear power.

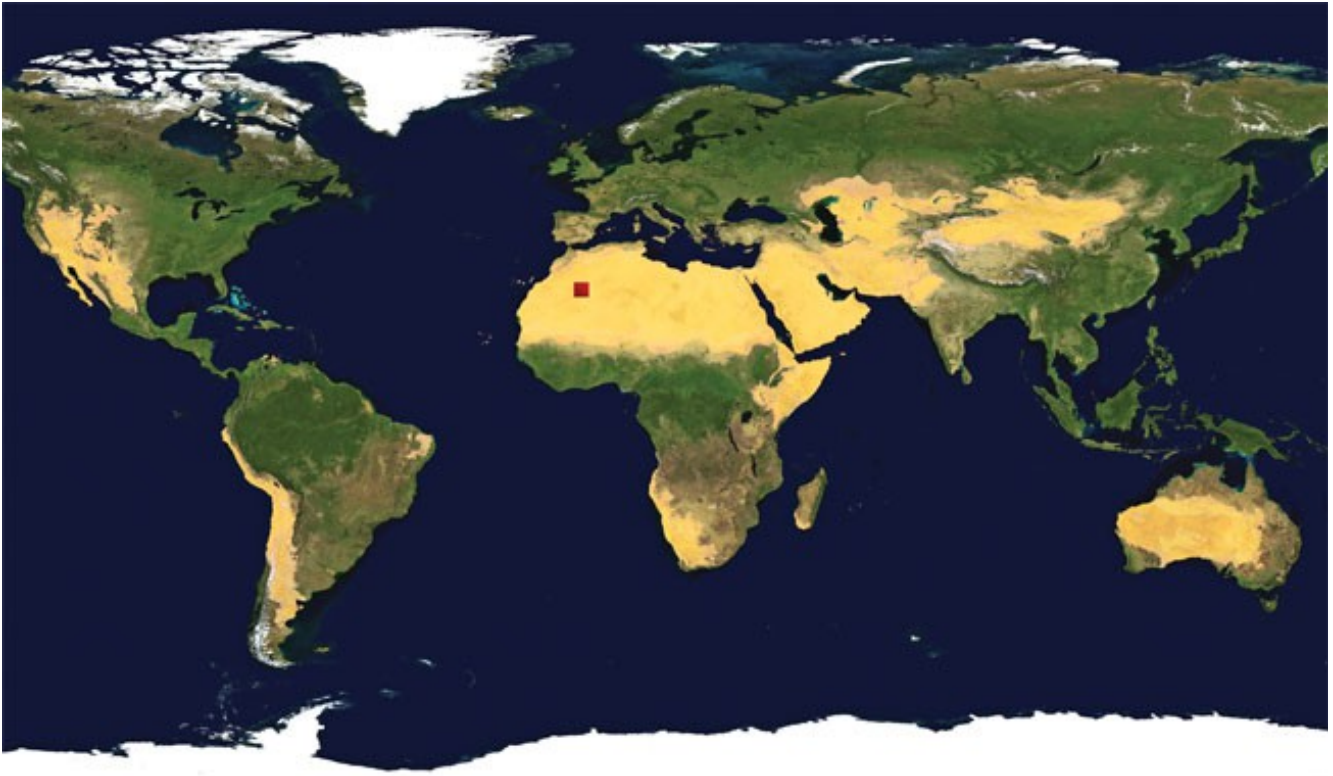

<http://cleantechnica.com/2013/08/02/radically-new-technique-to-produce-hydrogen-fuel-from-water-developed/>

<http://www.desertec.org/>

<http://www.astri.org.au/about-astri/>

### **How To End Dependence On Fossil Fuels & Nuclear Power ?**

#### **Worlds deserts can power the planet.**

**Every coastal city & town needs to invest heavily in hydrogen production from the oceans.**

A lot of countries have space agencies these days & approx 2000 planets & many moons have been discovered. The time is coming for the great expulsion, when populations of 150 people to 40,000 people will be transported to other planets & moons in countless spacecraft.

**However renewable energy is our primary goal right now.**

Nuclear power advocates are responsible for the extinction of humanity, for the world's nuclear resources are one of humanity's ticket to ride to colonize other planets & moons & note this planet will eventually be incinerated into oblivion when the sun expands into a red giant. We want to see a stop to uranium mining because uranium should be conserved for space research, we want all of the world's nuclear resources to be conserved for space research, We are anti nuclear power & pro renewable energy. Only one good thing came out of nuclear power & that is nuclear fusion but work still needs to be done to make nuclear fusion practical, the world has plenty of renewable energy resources. The world's nuclear resources must be conserved for outer space colonization research, World wide nuclear ban now, except for research purposes.

Just as steel bridges like the Sydney harbor bridge are not scrapped & reformed we think motor vehicles should not be scrapped, for robotic technology could always repair motor vehicles as opposed to scrapping them, this goes for a lot of steel machinery & motor vehicles, repair as opposed to scrap using sophisticated robotic technology. Motor vehicles & other steel machines could last 100's or even 1000's of years if they were repaired instead of being scrapped. Save the world's energy resources & repair instead of scrap. We have

reusable rockets & there should be reusable motor vehicles.

We see the need for a world electric grid, where electricity is transported all over the world, overland or by using submarine cable.

Below is a list of AUSI's long term space goals.

[1] Expand the construction of renewable energy infrastructure all round the world.

Robotic Biofuel cultivators.

Robotic Biomass cultivators..

Robotic Geothermal energy infrastructure construction.

Hydroelectricity expanded using robotic construction methods.

Robotic Solar energy infrastructure construction.

Robotic Tidal power infrastructure construction.

Robotic Wave power infrastructure construction.

Robotic Wind power infrastructure construction.

Robotic Osmotic power infrastructure construction.

Robotic Marine current power infrastructure construction.

Robotic Ocean thermal energy conversion infrastructure construction.

Robotic Hydrogen extraction from the oceans.

<http://en.calameo.com/books/00525020130d89900d8b2>

[2] Build approx 200,000 space elevators all along the equator.

[3] Build space fountains & launch loops all over the planet.

[4] Experiment with laser or maser beam powered propulsion.

[5] Use robots to build & launch massive hydrogen rockets from all round the world. Can the Aquarius rocket be made to be re-usable?

[6] Build a large network of solar satellites, otherwise known as space based solar power stations

[7] Build massive fleets of spacecraft & space tankers along with a network of space habitats in space.

[8] Build space elevators on the Moon & on Mars.

[9] Transport half of all of the air, water & soil on earth into space for use in space habitats, space tankers & spacecraft.

[10] Construct special underground habitats & above ground habitats on the earth, the moon & on Mars.

[11] Send robots to approx 1000 planets & moons that have been discovered in our milky way galaxy, these robots will explore the planets & moons & create infrastructure which will

sustain humanity.

[14] Transport people, air, water, elements, compounds & lifeforms to approx 1000 planets & moons that have been discovered in our milky way galaxy.

[15] Mine, process & destroy the rest of planet earth & out of the destruction will be furnished a network of space habitats & spacecraft & space tankers, this will be achieved by utilizing swarm robotics.

Note the above works may not necessarily be done in the above mentioned order.

Saint George is the architect of the solar system.

<http://space-technology.freeforums.net/thread/1/welcome-new-forum>

The MUD, Multi User Dungeon, otherwise known as the internet system is a illegal, fraudulent & pirated computer operating system, stolen & pirated from the old fashion, trusted & true zmodem capable dialup BBS's, Bulletin Board Systems & their international HQ's, Headquarters & WHQ's, World Headquarters. Seeing the MUD, Multi User Dungeon, aka internet is a fraudulent, pirated & illegal computer operating system, therefore the CSG, Church of Saint George, otherwise known as the Online Church Of Saint George, 2017 & USI, United Space Industries is suing 3.2 billion people who use the internet for \$19 trillion dollars + interest.
