Risk Rating: 4. whilst this has been awarded a risk rating of 4 due to still being in ICO we feel that this is one of the lowest risk ICOs we have promoted, further details on this can be found below.

Term: Short & Long

Returns:

Staking: – 120% PA

Lending: - 40% PM + Bonuses paid daily

Lending Term: – 90 Days

Please note that the phrase "lending" does not mean you are loaning your coins to another person. You are simply converting the coins to USD which is then traded by a "Robot"; you receive on average 40% return per month and then receive your stake back at the end of the 90 day term. The return is paid daily in USD and at the end of the term you will receive the stake back in USD to either convert to BTC or to repurchase HCR.

Lending Example:

If you purchased 1000 coins at ICO for \$500 and waited to lend until \$20 per coin the total lend amount would be 1000×20 which is \$20,000. This multiplied by 40% would give a return of \$8,000 per month paid daily and can be withdrawn at any time. You would receive \$24,000 in interest along with your original stake back of \$20,000 totalling \$44,000

If you chose to wait until the price of the coin was \$40 before lending this above figures would be doubled. For a more in-depth look please view the lending calculator:

http://bit.do/hotcryptolendingcalculator

Staking Example:

The moment you acquire HotCrypto (HCR) Coin it becomes an interest bearing asset with up to 120% return per year through PoS minting. All you have to do to earn with this method is to hold coins in your Hot Crypto wallet. Your returns again are paid daily but this time in HCR therefore increasing your supply. This means anyone holding Hot Crypto (HCR) Coin in their wallet will receive interest on their staking balance in return for helping maintain security of the network.

If you purchased 1000 coins and staked them for 1 year at the end of the year you would have 2200 coins, we would expect the price to have exceeded \$150 by this time therefore making your Hot Crypto portfolio worth \$330,000.

With this option you are not tied in to any term and can sell your coins at any time.

Exchange Listing: Internal & Coin Exchange

Price Targets: - \$20 January 18 - \$30 Feb 18 - \$40 April 18 - \$80 May 18 - \$100 June 18 -

\$120 July 18

ICO Rating: Strong Buy

Account Opening: https://www.hotcrypto.com/acc/register/id/lgbal1/

Hot Crypto (HCR) is a self-managing financial system with P2P transaction based on open source platform, developed on the Ethereum token ERC20 and HotCrypto (HCR) running on the Ethereum block chain. ERC20 is simply a subset of the HotCrypto (HCR) tokens; ERC20 is the standard interface for the token code. It enables seamless interaction with smart contracts and permission applications on Ethereum block chain. Thus HotCrypto (HCR) will follow the standard functions of ERC20 but not all. A part of function may allow outside interactions depending on the missing function of HotCrypto (HCR)

So that's the standard technical Jargon out of the way but what is Hot Crypto?

Well HotCrypto is yet another "Lending type" coin that offers insanely high profits from the use of their Trading Robot. As you will be aware since the success of Bitconnect, Regal and more recently Hextra many of these ICO's are giving insane returns as soon as they hit the exchange.

Lending ICO's are the current boom, everyone wants to buy them but with so many now coming to the market which are the best ones, working this out can be very hard.

I believe that HotCrypto will end up being one of the few which will be here long term. Quite simply they have a lot more to offer than many of the other ICO's available, I have had the pleasure of dealing with the HCR Team directly and Ryan, Ben and Chris have been very helpful, responsive and have provided me with 100% faith that this will be the number 1 lending coin that will be here in years to come.

Below are just some of the key points:

- In Depth Whitepaper
- Solid Road Map
- Wallets already available
- Strong team of 13
- Hot Cash Merchant payment API May 18
- Full Casino launch July 18
- Hot Crypto Debit Card launch July 18

Conclusion

I really like HotCrypto and cannot recommend it highly enough, this will be one if you don't purchase you will regret. First of all they have an amazing website that is not just a copy or "off the shelf" product, it oozes class. The domain was first registered in January 2017 and has been paid up for 10 years! This would certainly not have been done if they were planning an exit scam and proves that this has been in development way before the lending boom took hold of the Crypto world. The whitepaper is 45 pages long and is very detailed, it tells you exactly what they plan do and when, it leaves you with no doubt that this is a long term project destined for success. Now so far they are already in a different league to the attempts of the lending ICO's before them but they will also have their own Debit card and also will be launching a full Casino mid 2018! The team of 13 consists of 4 developers (design, programming and block chain development) 3 in marketing and 6 involved with the casino. As already discussed I have been dealing with the team on a daily basis for the last

month, without doubt I have never worked with a team so focussed on delivery a top end long term project.

With many lending coins there is a lot of hype pre ICO but as soon as the coins are sold the marketing and hype ceases. This will not be the case with Hot Crypto, due to the strong referral scheme offered post ICO to engage investors to lend we can see not only Hot Crypto but many social media marketing outfits really getting behind Hot Crypto. You can receive a huge 5% referral paid in USD for helping investors buy post ICO; this will create on going hype and an ongoing stream of buyers that will drive the price up.

And of course don't forget, of the tiny 8 Million supply, there will only be 1.5 million coins sold at ICO and circulating! When you factor in that the sale price of Hot Crypto will rise during the ICO from \$0.5 to \$4.7 you are guaranteed to make huge profits in the short term.

We rate this as a strong buy and not one to miss at any cost, we fully expect Hot Crypto to reach a minimum target within 6 months of \$100

How to create a Hot Crypto wallet address

The HCR wallet address is generated only after you bind your ERC 20 wallet address.

- 1. You must first create and ERC 20 wallet, such as, https://www.myetherwallet.com/.
- 2. Once you create an ERC 20 wallet your account will have a public wallet address and private key.
- 3. Copy the public ERC 20 wallet address.
- 4. Click "Coin Deposit" then the HCR icon.
- 5. Paste the wallet address into the field under the HCR icon.
- 6. This will bind your ERC 20 public wallet address to the Hot Crypto site.
- 7. This binding will then generate a unique HCR public wallet address.

Transferring HCT from MEW to Hot Crypto Exchange for lending

- 1. Go to https://www.myetherwallet.com/
- 2. Click "Send Ether & Tokens" and unlock wallet. I use my private key to unlock.
- 3. Make sure your MEW wallet has some ETH in it to pay for transaction fees.
- 4. Click "Load Tokens" in orange. This will reveal the custom HRC token we created earlier.

- 5. Paste the HRC wallet address in the MEW "To Address". The HRC wallet address was generated by pasting your public MEW wallet address under the Hot Crypto icon in the "Coin Deposit" tab.
- 6. Enter the amount to send.
- 7. The "Gas Limit" will automatically adjust. For me it was 36,309. Leave the Gwei set to 21.
- 8. Click "Generate Transaction". It will take about 5 minutes to show up as a pending deposit in the "Coin Deposit" tab under "Deposit History".
