

Install Vendmiser on Pepsi and other vending machines		
\$	Red (beginner)	Purchasing
Metrics	kW saved	
Explanation	<p>Vendmiser is a plug-and-play device that uses an occupancy sensor to turn vending machines on and off depending on whether people are using them. A Vendmiser converts a conventional machine to an Energy Star level of energy usage. <a href="#">A brief study</a> done by the Tufts Office of Sustainability found that installing a Vendmiser unit can save \$192/year, compared to a cost of about \$167 to purchase the item. That's a potential one-year pay-back.</p>
