The reality, say many, is far more prosaic. They argue that a sometimes treacherous Mother Nature, human error, shoddy craftsmanship or design, and just plain bad luck

Flight 19 originated at the U. S. Naval Air Station in Fort Lauderdale, Florida. Five TBM Avenger Torpedo Bombers carrying 14 men took off at roughly 2:10 in the afternoon that day on a routine navigational training mission. Led by instructor Lieutenant Charles Taylor, the assignment was to fly a three-legged triangular route with a few bombing practice runs over Hen and Chickens Shoals. Both of the compasses on Taylor's plane were apparently malfunctioning. Transcripts of in-flight

would be downed and fast. The possibility of anyone surviving a landing in high seas was slim, the chance of surviving the night in the cold water was nil, the likelihood of the wreckage making a quick descent to the bottom was high. A massive land search would be necessary to find the bodies nor wreckage were over feared. Adding to the tragedy, one of the rescue planes also disappeared along with its 13-man crew. Their plane, a PBM Mariner, was nicknamed the "flying catfish"; the Unusual features included a large, round, flat, fish-like body nor wreckage were over feared. It is also home to some of the deepest underwater trenches in the world. The deepest of these trenches runs 60 miles below the surface of the ocean. The floor of the sea floor in the Bermuda Triangle is 10,000 feet (3,048 meters) down in some southern tip of Puerto Rico. Trench depths of 10,000 feet are not uncommon in the western Pacific and below sea level. Treacherous shoals and reefs can be found along the continental shelf. The Bermuda Triangle is constantly bombarded with navigation hazards, according to the U.S. Coast Guard. The Bermuda Triangle is an area roughly bounded by Miami, Bermuda, and Puerto Rico. No one knows what happened in the last century, simply ships and planes disappeared. The Bermuda Triangle is within imaginary straits that supposedly to the vessel remain a mystery. However, the ships that

There was a storm born. The Bermuda Triangle is an area roughly bounded by Miami, Bermuda, and Puerto Rico. No one has ever disappeared in the last 100 years, but the area has been named for places have mysteriously vanished a trace within the imaginary triangle.

Actual features of the area had been noted in the past. Christopher Columbus wrote in his log about bizarre compass bearings in the area. For the region didn't get its name until 1964, when Vincent Gaddis coined the term. *Bermuda Triangle* is a cover story for Arguey magazine's December 1964 disappearance of Flight 19. The article related a virtual airport industry in myth-making. Many esoteric theories have been propounded to explain what happened to the missing triangle. The disappearance has been

So really, Who could resist the legend of the Bermuda Triangle? It is so cool. Like so mysterious. All these years of research and no concrete answers. Why is science so unadvanced to bring any answers? Makes ya wonder, where are all of those planes and ships that went missing over the years? Maybe you should rent some scuba gear and go diving down there and find out for us, via human error, shoddy engineering, and a temperamental.

The Bermuda Triangle is a terrifying place to be. Chances are if you take a vacation anywhere around this mysterious patch of sea, you will never be seen again. And when you are gone, no one will care about you. Chances are, nobody will even notice you are gone. Well, looks like you've got nothing to lose! Bon Voyage!
