Who are we ?

Specialized in the manufacturing of e-liquids since 2010, Solevan France Group is experienced in meeting the requirements of the demanding electronic cigarette market. From design of the product through the production and distribution, the entire manufacturing process takes place in France. Solevan France Group guarantees high levels of quality and expertise by following all the latest European regulations.

Our manufacturing facility combines productivity and safety to create e-liquids of excellence. Our range of automated and semi-automated lines have the daily production capacity to meet the volume requirements of all our customers. We also provide contract manufacturing with a full or a la carte range of services according to your requirements and wishes. Our R & D department is also at your service to optimize production of your e-liquids to tight deadlines. We have a full range of expertise available to you in order to meet all your needs.

LATEST GENERATION EQUIPMENT

LATEST GENERATION EQUIPMENT

Our laboratory includes the latest generation equipment to provide high production capacities with up to a million bottles per month. We also offer a variety of packaging containers in all sizes and up to 10 liters, in PE, PET and glass bottles. Our variety of production lines allows us to be flexible and responsive. In order to meet all our customers requirements, our quality department supervises the production runs in our facilities which meet the strictest hygiene and safety regulations.

REGULATION

The recent growth of the electronic cigarette in France and Europe is the origin of the regulatory process (European Directive 2014/40/EU) and standardization. These regulations and guidelines are intended to regulate the market and to ensure consumer safety. Starting late October 2016 foreign manufacturers will be denied access to the European market.

SOLEVAN USA has a branch office in Miami (Florida) with a full team available to assist all foreign brands looking to continue selling or entering the European market through our headquarter Solevan Group France (France).

Solevan France offers US manufacturers and brands the opportunity to produce under various compliances testing in line with TPD regulations and standards.

Application Submitted to European Authorities

What is TPD declaration?

The Tobacco Products Directive is a law to control all products associated with nicotine consumption. The products of the vape (e-liquid and electronic cigarettes) are included in this Directive.

TPD is a very detailed and complete file, and among many other points, it includes the declaration of all substances contained in more than 0.1 % in e-liquids. Similarly, an analysis of emissions generated by all substances.

Solevan France offers a dedicated staff to your TPD declaration (administratively and scientifically), to register your declaration, production and the standards for labeling.

We will guide you through the steps to follow throughout the declaration of production and bring your products to the market TPD Ready.

Solevan France has the equipment and expertise to analyze your products. It is therefore able to know the molecules present in your e-liquids and to fill your TPD declaration. Your e-liquids formulas must meet the requirements for the European market.

The analysis of emissions following the protocole of the required norms will be accepted only for TPD declaration to be displayed as above:

The step-by-step creation of your e-liquid

1

DETERMINING YOUR NEEDS

Our laboratory will provide you with a professional sales team specialized in the creation and marketing of e-liquids. We will determine your requirements and the best way to meet them in a friendly and attentive environment. We have the key to the success of your e-liquid manufacturing project.

Our flavor experts will help you to select the best vape juice flavors, containers and marketing materials in conjunction with our R&D department. Our team combines specialists experienced in formulation with marketing and sales professionals. Together, we will advise you on the development and formulation of unique e-liquids and create an identity and marketing campaign.

2

DEVELOPMENT OF YOUR E-LIQUID

Once we have determined your requirements, our e-juice flavor experts will develop a product which fully matches your expectations. You can either draw inspiration from the wide range of formulas we already offer, or create your own vape flavor by letting your imagination run wild.

Our e-liquids are all made from vegetable glycerin, propylene glycol and french food flavorings depending on the formulation. You can choose from a variety of options for the composition of your product such as 20/80, 70/30, 60/40 or 50/50, etc... We also offer formulas with different nicotine levels from 0% to 18%, as well as products alcohol-free, diacetyl-free, etc...

3

Your brand

Our laboratory also has a graphics department including experts in marketing and packaging to meet your customized labeling and packaging requirements. Following your instructions we will create your brand of e-liquid and help you to see your project through completion.
