

Senior Software Engineer (Ruby on Rails)

Influx powers customer support teams for leading SaaS and eCommerce companies. Our distributed team of agents, managers, and analysts work directly with internal teams at some of the best known businesses in the US, Australia, and the UK. We're building a company that constantly looks for the overlap between the personal and career ambitions of its staff and the internal opportunities that open up at a high-growth company.

Currently, we're seeking to hire a Senior software engineer with a background in Ruby on Rails

Responsibilities include:

- Development and maintenance work on multiple back-end and front-end applications
- Communicate effectively via email, chat and face-to-face
- Communicate effectively with customers, peers, and your manager
- Contribute to a high-performance and friendly workplace culture

Qualifications

- 2+ years experience with Ruby on Rails
- 5+ years experience as a software engineer
- Worked on multiple modern web applications
- Personal integrity, can-do attitude, team player
- Continuous learner of technology
- Strong software engineering and problem solving skills
- Excellent written and verbal communication skills in English
- Bonus points for experience with any or all of the following: Rails, HAML, postgres, React, heroku, AWS.
- Extra bonus points for engineers with leadership or management experience.

Benefits

- Work remotely from home in a fast-paced environment with a high degree of autonomy
- Work with and learn from high-performing colleagues from around the world
- Negotiable salary
