

3rd medical research conference

Theme: Scientific research improve the health of the community

11-12 November 2018

Important Information:

- All abstracts & full papers must be submitted on line through the email: con3medr@gmail.com
- The selection panel of the conference committee will consider all abstracts received by the published deadline to ensure that the proposed submission is relevant to the Conference.
- Studies that are found old and end pointed more than five years will not be accepted.
- You should have received an email telling you that your abstract has been selected for submission as a paper. This email will confirm the date for returning your full paper.
- All papers will be double-blind peer reviewed by members of the scientific committee to ensure an acceptable writing standard , the paper is of a suitable length, the standard of English is adequate and the paper is appropriately referenced.
- The work should not have been published elsewhere and should not be intended to be published elsewhere during the review period.
- Papers not conforming to the conference style will be returned.
- Papers must be submitted as a Word document as well as a PDF file.
- All abbreviations should be in full when they are mentioned first in the text, thereafter they can be written in their abbreviated form.
- No changes in the paper title, abstract, authorship, and actual paper can be made after the submission deadline
- Scientific committee of conference decided to publish the best three papers in TMJ

Submission Guidelines:

1-Title Page

The title page should contain a title, name(s) of author(s) and their affiliations & departments. The title should be concise but informative without any abbreviations and it should enlighten the contents of the paper.

The title should be 14pt Times New Roman, the authors, their affiliations and department in 11pt Times New Roman, both centered.

All affiliations should be provided with a lower-case superscript letter just after the author's name and in front of the appropriate address.

The name of the corresponding author should be indicated along with telephone and e-mail address.

2- Abstract submission requirements:

The abstract must meet the following requirements in order to be considered for acceptance to the conference:

It should be 300-350 words. Divided to sections: background, objectives, methods, results and conclusion.

Keywords:

Immediately after the abstract, about 3-6 keywords should be given. Use of abbreviations should be avoided.

3-Full paper submission requirements:

- Papers must not exceed 5000 words in length, including abstract, figures, references for a total of 10 pages. divided into sections with the headings: Abstract, Key-words, Introduction, Material and Methods, Results, Discussion, conclusion, References, Tables and Figure legends.
- A paper may include a maximum of 6 tables and/or figures in total. It may include up to 40 references.
- Each section heading should be bold and in 12pt Times New Roman.
- The Main document is based on Times New Roman 11pt text and double spacing.
- Alignment should be Justified, except for title, tables, figures all centered.
- Page number should be centered in the footer of each page of the document.
- If your paper includes illustrations, please ensure these are of a high quality.

Introduction:

Provide a background for the study (the nature of the problem and its significance). State the specific purpose or research objective and summarize the rationale for the study. Cite only directly related references.

Methods:

"Materials & methods: patients & methods: subjects & methods"

This section will include sub-sections.

It should include and describe the following aspects: study design, study setting, study duration, study population, sample, study tool, data management & analysis and ethical considerations.

Result:

Present your results in logical sequence in the text, tables, and figures, giving the main or most important findings first. Do not repeat all the data in the tables or figures in the text; summarize only the most important observations.

Tables and figures should be presented as per their appearance in the text.

Place explanatory matter in footnotes, not in the heading.

a) Table :

Titles in tables should be short but self-explanatory, containing information that allows readers to understand the table's content without having to go back to the text. Be sure that each table is cited in the text.

b) Illustrations :

Figure and image should be with high-resolution or good quality.

Titles and detailed explanations belong in the legends, not on the illustrations themselves.

Figures should be numbered consecutively according to the order in which they have been cited in the text.

Discussion:

Address each of the most significant findings of your study, as follows:

- i. Briefly summarize the finding
- ii. Compare and contrast the findings to other studies
- iii. Explain the meaning, implications, and value of the finding

Conclusion:

After discussing each major finding, provide conclusions and /or recommendations based on your findings and discussion and avoid unqualified statements or conclusions not adequately supported by the data.

References:

References should be numbered consecutively in the order in which they are first mentioned in the text. At least half of the references should be within the previous five years.

The references in the introduction should fulfill the following conditions:

- 1- They should be Arabic number.
- 2- They are written as superscript, between brackets.

Example : Mass vaccination with BCG started in many countries, after the production of an attenuated strain of the bacterium that causes tuberculosis, by two French scientists, Albert Calmette and Camille Guerin in 1921.⁽¹⁾

In discussion section the references should mentioned the author's name, the year written between brackets, and country or city.

Example: In a Canadian study, by Steinmetz et al. (1983)⁽²⁰⁾, more than half of the pediatric clinics examined were not storing vaccines under optimal conditions. Similar results, confirming this study, were achieved by Bishai et al. (1992)⁽²¹⁾, in Los Angeles, they found that high prevalence of avoidable vaccine storage errors in their sample was striking.

In references list: Use the style of the examples below, which are based on the formats used by the NLM in Index Medics.

1. Standard journal article (for up to six authors):

Lerman SJ, Gold E. Measles in children previously vaccinated against measles. JAMA 1981; 216 : 1311 - 4.

2. Standard journal article (for more than six authors): List the first six contributors followed by *et al.*

Abuzzahab MJ, Schneider A, Goddard A, Grigorescu F, Lautier C, Keller E, et al. IGF-I receptor mutations resulting in intrauterine and postnatal growth retardation. N Engl J Med 2003; 349: 2211-22.

3. Organization as author

Diabetes Prevention Program Research Group. Hypertension, insulin, and proinsulin in participants with impaired glucose tolerance. Hypertension. 2002;40(5):679-86.

4. Books

-Personal author(s): Park JE. Textbook of preventive and social medicine. 12th ed. Jabalpure, Banarsidas Bhanot, 1989.p.137-8.

- Chapter in a book: Grabar P. The historical background of immunology: in: Stitis DP, Stobo JD, Fundenberz, HH, Wells JV. Basic and clinical immunology, 15th ed. Los Altos, California: Lange medical; 1984.p. 1-12.

5. Electronic Material

Journal article on the Internet : Sridharan S, Unnikrishnan JP, Sukumaran S, Sylaja PN, Nayak SD, Sarma PS, et al. Incidence, type, risk factors, and outcome of stroke in developing country: The Trivandrum stroke registry. Stroke 2009 [Cited 29 March 2016];40:1212-1218. Available from: [http:// www.stroke.ahajournals.org/](http://www.stroke.ahajournals.org/)

Important dates and deadlines:

Abstract submission	24 April 2018
Abstract Deadline	24 June 2018
Final Manuscript Deadline	24 August 2018
Conference dates	11-12-November2018
