Summary

An 18 year old self-taught developer specializing in React.js and other JavaScript technologies. Able to learn new methods or technologies if the job requires it, Self-motivated with passion for Web Application Development. Seeks junior position providing the opportunity to contribute and expand upon skills, experience, and capabilities.

Personal Projects

All my projects are available on my [github](#) or my website portfolio – alhanielbaya.github.io

- **Tweeter** - A twitter clone with basic functionalities like logging in, posting a tweet and following users. Uses Oauth technology, specifically Facebook and Google, for authentication and authorization and MySQL for the back-end. Built with mobile-first concepts and also a Progressive Web App.
- **User Authentication** – An app which you can login and sign out with basic authorization concepts.
- **Hourly Weather** – A weather app showing hourly forecasts. Also a PWA.
- **Explore Beers** – An app about beers, and while creating it, taught me about how to connect to third party APIs and HTTP requests.

To view the source code or the live demo check out my [website](#).
